ABSTRACT

A system and method for providing a service to promoters, including venues and advertising sponsors, who wish to provide promotions. The service includes making promoter promotions accessible by the mobile phones of members associated with an organization. Typically a promotion and member are matched based on the member's geographical position, which may be reported by the member or determined automatically during a transaction, a promotion redemption, or by a position sensor in their mobile phone. A promotion and member are optionally matched by the member's traits and behaviors. In addition to accessing promotions, members have mobile access to real-time information about the venues, such as the demographics of venue attendees and media posted by attendees concerning venue characteristics. Using the system, venues can determine who is shopping nearby and can send promotions to their phones, and members can know before going which venues have promotions and their preferred attendee demographic.

SYSTEM FOR PROVIDING A SERVICE TO VENUES WHERE PEOPLE PERFORM TRANSACTIONS

CROSS-REFERENCE TO RELATED APPLICATIONS

TECHNICAL FIELD

[0002] The field of this invention is providing services to venues.

BACKGROUND

[0003] MoSoSo (short for “mobile social software”) has become a recent phenomenon for social networking. The efforts are primarily directed to either meeting new people or providing a simplified method for keeping track of acquaintances. Various approaches are employed using individual terminology and somewhat different protocols. Some of the existing approaches are concerned with the manner of introducing people to each other.

[0004] For example, Mobido™ (www.mobido.com) collects photographs of members and can provide the photograph to another member under certain restricted circumstances. It also provides for individuals or businesses to be contacted through the use of “tags.”

[0005] Wave Market promotes StreetHive™ (www.streethive.com) which provides social networking and location tagging between friends. It allows people to know where others are and to contact such people.

[0006] Dodgeball™ (www.dodgeball.com) provides another social cell phone capability, where you can communicate with groups of friends. It also provides addresses of venues.

[0008] For the most part the MoSoSo capabilities are primarily for the users of the system to allow for meeting people and locating a defined group of people. They do not concern themselves with providing opportunities for businesses to direct their communications to likely patrons. Rather, their attention is directed to the individual subscribers and looking for points of similarity between the subscribers to bring one subscriber to the attention of another.

[0009] There is substantial interest in providing venues, where people perform individual transactions, with information that allows them to attract clientele to their venue based on the traits, behavior and demographics of people at the venue and the desired traits, behavior and demographics that the venue wishes to achieve. By demographics is meant a statistic concerning a selected population, often a population where each person possesses the same trait or traits. Systems and methods are valuable that empower the venues to compete for desirable clientele based on reliable information about potential clientele and provide for efficient use of the venue’s resources, while enabling the client to select a venue based on current information, including promotions, regarding the venue.

RELEVANT LITERATURE

SUMMARY OF THE INVENTION

[0011] One embodiment of the subject invention provides a system for providing a service to venues where people aggre-
Another embodiment of the subject invention provides a system for providing a service to venues where people perform individual transactions. The system provides a mobile promotion system for advertisement and offers, collectively referred to as promotions. The system is also capable of providing a service to sponsors, where venues and sponsors are collectively referred to here as "promoters." A system data processor can receive promotions from promoters wanting the attention of members, particularly members at a desired location, and, optionally using instructions from such promoters, can forward the promotions to members of the system. Such instructions may comprise directions for how a particular promotion should be directed to members of a desired demographic group, a member possessing a desired trait or a member exhibiting a desired behavior, any of who are at a desired location.

[0012] The system includes a number of parameters which, depending upon the particular service, may share a plurality of the parameters. Among the parameters is the ability to identify the location of a person and a transaction between such person and a venue. Another parameter provides for social networking. Depending upon the application of the system, several of the parameters will be employed together. Transactions typically involve (1) a purchase transaction using an electronic transaction, such as a credit, debit or charge transaction, or (2) a redemption transaction for the redemption of an offer.

[0013] One parameter involves information concerning the traits, behaviors or demographics of people who attend the venues. Such information will be of interest to some of the venues and people. In all cases, the people are members of an organization, such as a venue, interested in the presence of the members at the venues. The organization uses a system data processor that receives location information and processes and provides organization information to the members and in some applications to the venues. The venues have characteristics or promotions of interest to the members, and which may be provided to the members with organization information.

[0014] The system includes at least (1) mobile communication devices of members, and (2) a system data processor having data comprising location and optionally traits of people who are members of the organization. The system data processor can be a computer server and typically includes at least a system microprocessor and system computer memory, or access to a database of information. The system data processor can be a cloud computing system. The system data processor provides member-intended information to be viewed on mobile communication devices of members, where the member-intended information comprises characteristics and/or promotions of the venue(s). In addition, the system data processor can also include trait and behavior information of members, location information received from the mobile communication devices or venues, and can include characteristic information concerning the venues. Location information is obtained by virtue of an action by a member; although the mobile communication devices may comprise global positioning system (GPS) capability to provide location information. The system data processor can process the information present in the system computer memory and system database and provide venue-intended information that may include trait information, behavior information, and demographics of the members or non-members; and/or member-intended information that may include in addition to the other information indicated above, characteristic information and promotions relating to venues. The system data processor can also serve to receive (1) information from the venues, such as characteristic information and promotions, and (2) information from the members, such as location information and characteristic information. The system data processor may also help facilitate communication between members.

[0015] Typically the system data processor stores information concerning traits, behaviors and demographics of the members, venue characteristics, and other information, in a system database. In one application, the subject invention has applicability where a member performs an action at a primary venue, and the primary venue or secondary venues may have an interest in providing characteristics and/or promotions to the member at the primary venue. The organization will have a commercial relationship with at least one of the venues. This application is not directed to social networking and is based on information received from the member or a third party. The member may be at the primary venue to purchase a product or redeem an offer provided by the organization on behalf of a venue.

[0016] In the case of a product purchase, when the member makes a purchase transaction, such as an electronic transaction using a debit card, credit card, charge card, PayPal®, Google Pay®, a mobile phone, and the like, the organization can have a relationship with the entity governing the purchase transaction, referred to here as the purchase-transaction entity, whereby the purchase-transaction entity will promptly provide the location information of the purchase transaction, and optionally the nature of the purchase, to the organization. The purchase-transaction entity will provide the vehicle by which the purchase transaction is accomplished. Typically, when permission is granted by the member, the purchase-transaction entity provides the organization with a member identifier, or member ID code, for the member that is associated with the purchase transaction.

[0017] In the case where the member is redeeming an offer, the offer will be displayed on the member's mobile communication device. The offer will include the particular venue at which the redemption is to occur, or when there is a related chain of venues, provide coding to indicate at which of the venues of the related chain the redemption is to occur. When the member redeems the offer in accordance with the organization's protocol, the data processor will determine or infer the location information of the member by virtue of knowing at which venue the redemption occurred and knowing the location of that venue. Once the system data processor has determined the location information of the member, promotions or characteristics of the primary and/or secondary venues can be viewed using the member's mobile communication device. In some instances the mobile communication device may have GPS capability, and with the permission of the member, upon the occurrence of a transaction, for example as notified by the purchase-transaction entity (or other transaction entity), location information will be retrieved by the system data processor from the mobile communication device having GPS capability.

[0018] The organization's redemption protocol may include any convenient redemption protocol. The redemption protocol may include the member viewing a promotion on their mobile phone and showing the promotion on their phone to a venue representative. Optionally, the member may make a selection on their phone indicating that they wish to redeem
the promotion, or the member may send indication of their desire to redeem the promotion to a venue representative. The member may then need to show or send the redeemed promotion on their phone to the venue representative, or may be requested to select another option on their phone to verify the redemption. Such a verification step may cause a message to be sent to the venue or the venue representative, including the venue representative's mobile phone. Alternatively, to redeem a promotion, the member may show their mobile phone to a venue representative, where the mobile phone may display a code, such as a bar code, that the venue representative scans in order to redeem the promotion or otherwise perform a transaction.

[0019] In effect, the data processor can receive the location information in a variety of ways, including: (1) the location information is transferred to the data processor by virtue of a purchase transaction, such as an electronic transaction, by a purchase-transaction entity, such as a venue representative; (2) the location information is determined by virtue of the offer redemption transaction, such as at a venue of a known location, by a redemption-transaction entity; or (3) the location information is retrieved from a mobile communication device having GPS capability. Both the purchase transaction and redemption transaction are transactions, and the purchase-transaction entity and the redemption-transaction entity are transaction entities. The organization can be a transaction entity.

[0020] Location information typically includes both "where" and "where" related to a transaction. Different transaction entities provide location information with different temporal and positional resolutions and accuracies. Transaction entity policy, as well as technical reasons, may be responsible for a particular resolution employed or resulting accuracy.

[0021] Location information typically comprises a narrow range of time (i.e., timeframe) for a transaction and a narrow vicinity of location of a member initiating, performing or otherwise related to the transaction. A narrow range of time may include within the last second, within the past minute, within the past 5 minutes, within the past 15 minutes, within the past half hour, within the past hour, within the past two hours, and the like. A narrow vicinity may include any of the following, or a radius from any of the following: a latitude and longitude; a name of a venue such as a department store, specialty store, grocery store, restaurant or bar; the name of a group of venues; the name of a neighborhood; the name of an intersection; a range of streets providing a bounding; the name of a shopping center; the name of an airport or other transit station; the name of a park; the name of a public place; the name of a landmark; and the like. The choice of radius depends on whether walking or driving distance is desired. For walking, a convenient radius is from a few feet to a mile. For driving, a convenient radius is from a few feet to 30 miles.

[0022] A computer program running on the system data processor can use the location and trait information of members to determine the demographics of members, including the number of members at the venues, and optionally estimate the demographics of attendees (i.e., including non-members) at the venues. The computer program may also determine the demographics of members, and estimate the demographics of people, in the vicinity of the venues. The computer program may also predict, based on the number of members using the system, how many people may soon arrive to a venue.

[0023] The system of the subject invention applies generally to any venue where people assemble or goods are sold, such as department stores, supermarkets, stores at malls, night clubs, restaurants, bars, etc., that is, places where people go to obtain goods, usually purchase goods and places associated with groups of people who typically don’t know each other and are interested in an enjoyable experience that may be associated with shopping, eating or entertainment. To clarify how the subject invention may be practiced, the description below will primarily focus on two embodiments: one where the venue is where goods are sold and the other where the venue is for socializing and entertainment.

[0024] The system of the subject invention is referred to here as the "Hoozware" system, a play on the phrase, "Who’s where?" "Hoozware" and "Hoozware . . . so you know who’s where." "Hoozware . . . who’s where, what’s happening, right now?" are all service marks of Hoozware, Inc. The Hoozware system is a service which helps promoters target advertisements to specific desired clientele who are members of the Hoozware system. Members of the Hoozware system in turn are encouraged to use the Hoozware system in order to receive rewards, including: financial rewards from the organization, which in this case is the operator of the Hoozware system, rewards such as promotions from promoters and receiving information regarding the characteristics of the venues.

[0025] In the case of a venue for the transfer of goods, the member will generally be present at the venue to obtain goods, by purchase and/or by redemption of a promotional coupon. The venue at which the member is present or other venues in the vicinity have the opportunity to inform the member of promotions. Since the member will usually be shopping, the promotion has a greater likelihood of being acted upon than an advertisement in a newspaper or other promotion distant from the venue.

[0026] In the case of a venue for socializing and entertainment, such as a nightclub, much of the information comes in real time from other members of the Hoozware system who are attending, or recently attended, the venue. The Hoozware system helps the managers efficiently and effectively determine which members fit the profile of clientele they seek to entice to their establishment at a particular moment in time. The Hoozware system also helps its members efficiently use their time to determine which venue has the atmosphere, music, crowd, etc., they desire at a particular moment in time. Hotels could provide their hotel guests with a "guest!" membership to the Hoozware system to use while they’re staying at the hotel to aid their guests in efficiently using their time to find a local hot spot to hang out at after they’ve finished with their business for the day.

[0027] Members can be incentivized to provide their location information to the system data processor by checking in at the venue using their mobile phone. An example incentive is qualification to participate in a game, including a game of chance. The game may be against a computer, including a program running on the mobile phone or the Hoozware server. The game may also be against other people, including other members. In one example, after checking in, a simulated roulette wheel can be presented on the phone display, where the member may press a key to initiate the spin and determine whether she receives a prize, e.g., a 2-for-1 drink or even a free drink. Another exemplary game is a "shell game" game of chance where there are four shells, or even four drink shakers, displayed. The member selects one of the shakers which causes it, or up to all the shakers, to be raised on the display showing what is virtually beneath them. If
beneath the selected shaker is a full drink glass, the member wins. Underneath “non-winning shakers” an empty glass may be displayed. Limiting the time in which the prize can be redeemed by the member at the venue ensures that the member is checked in at the venue prior to playing the game. Depending upon the nature of the venue, different scenarios can be employed for the game.

[0028] The Hoozware system helps a promoter find answers to one or more of the following questions and contact relevant members with promotions: (1) Who is currently at other venues; (2) who is in the vicinity; (3) who is out now who was previously at their venue; (4) who has not already been to their venue; (5) who likes the type of goods or entertainment, including type of music, that their venue is offering; and the like.

[0029] The Hoozware system relies largely on Hoozware system members for automatically and voluntarily providing data which are compiled by the Hoozware system and used by the promoters to address desired customers, and used by other Hoozware system members to determine desirable venue destinations. For goods-selling venues, one way to locate a member is by the member performing a transaction. The transaction may be a purchase transaction, such as an electronic transaction, where the cost may be paid through a third party, or the transaction may be a redemption of a coupon using the member’s mobile phone, which coupon is provided by Hoozware on behalf of a promoter. In the case where the cost is paid through a third party, the third party can have an agreement with Hoozware to notify Hoozware of the location of the transaction of the Hoozware member.

[0030] A first important example of the subject invention includes a system comprising a network of venues and an organization communicating with the venues, the organization having people as members, the venues having promotions or characteristics of interest to the members, wherein when a member transacts a transaction at a venue, the location and time of the transaction is communicated to the organization, the system comprising: mobile communication devices of the members; a system data processor having data comprising: (A) member and venue information; (B) location information received by the data processor in the timeframe of the transaction, the location information comprising the location and time of the transaction; and (C) the characteristics or promotion of at least one venue; wherein when the transaction is transacted the location information is transmitted from the site of the venue to the data processor; the data processor transmits the location information to at least one venue or the data processor has previous instructions from the at least one venue as to whom should receive characteristic or promotion information; the at least one venue may transmit characteristic or promotion information based on the location information to the data processor or may transmit characteristic or promotion information prior to receipt of the location information; and the data processor transmits the characteristic or promotion information received from the at least one venue to the mobile communication device.

[0031] A second important example of the subject invention includes a system for providing a service to promoters associated with an organization having people as members, the promoters having characteristics or promotions of interest to the members, the system comprising: mobile communication devices of the members; a system data processor having system data comprising: (A) location information as a result of a transaction of a member at a venue; and (B) the characteristic or the promotions; and the system data processor processing and providing a member member-intended information comprising at least a portion of the characteristics or the promotions.

[0032] This second important example includes a number of important variations, including:

[0033] 1. wherein the location information includes a narrow range of time for the transaction;

[0034] 2. wherein the location information includes a narrow vicinity of location;

[0035] 3. wherein the mobile communication device of the member has position-sensing capability and at the time of the transaction provides the location information; and optionally

(i) wherein the location information includes the location of the member; or

(ii) wherein the position-sensing capability employs at least one of GPS, AGPS, cell-towers, WiFi access points, WiMAX and IP addresses;

[0036] 4. wherein the member-intended information is viewable on the mobile communication device of a member;

[0037] 5. wherein at least a portion of the traits, behaviors or demographics of people who attend the venue is provided to the promoter;

[0038] 6. wherein the promoter is associated with the venue;

[0039] 7. wherein the promoter is not associated with the venue;

[0040] 8. wherein a transaction entity provides (A) the location information to the system data processor; and optionally the system data processor refines the location information, or (B) the transaction occurrence time when the transaction occurs, wherein the mobile communication device of the member provides the location information associated with the transaction occurrence time to the system data processor, and wherein the mobile communication device receives the location information from at least one of (a) position-sensing capability, (b) data provided by the member and (c) another organization; and optionally (i) wherein the another organization determines the location information from position-sensing capability associated with the mobile communication device or from data provided by the member, (ii) wherein the position-sensing capability is associated with the mobile communication device, (iii) wherein the transaction is a redemption transaction or a purchase transaction, (iv) wherein the transaction entity is the organization, or (v) wherein the location information comprises at least one of (a) latitude and longitude, (b) a code, (c) Zip code, (d) name of the venue and (e) location center and radius;

[0041] 9. wherein the transaction is a redemption, and the system data processor determines the location information from the location of the venue where the redemption occurs;

[0042] 10. wherein the transaction is a purchase transaction and a purchase transaction entity provides the location information to the system data processor; and

[0043] 11. wherein the transaction is a purchase transaction, a purchase transaction entity notifies the system data processor of the purchase transaction, and the mobile communication device having the position-sensing capability provides the location information to the system data processor.

[0044] For socializing and entertainment, members can “opt in” to the Hoozware system by signing up with Hoozware to use the web version or by loading Hoozware system software onto their mobile telephone, which may be GPS-capable and sometimes simply referred to here as their
“GPS mobile phone”. In brief, the HooZware system records the location of its members and compiles data and statistics about the members that are attending each venue and makes the data and statistics available to the venue managers and optionally to other members.

[0045] Data provided by members of the HooZware system are sent to a HooZware system server computer using the member’s mobile phones. When a member with a GPS mobile phone selectively provides to the HooZware system server the GPS location of their mobile phone, the location is also assumed to be the location of the member. The HooZware system server runs a computer program with a computer algorithm which compares each member’s updated variable position to the known fixed position of each venue, which for example, is a nightclub. The computer program may classify a member as: a nightclub candidate, in proximity to a nightclub, on the way to a nightclub, at a nightclub, etc. Such classification may be used by nightclub managers to determine which targeted advertisement to send to the member. Such advertisements are sent by the nightclub manager to the HooZware system which then directs the advertisement message to the desired member’s mobile phone or their account.

[0046] A member might be classified by their location (such as if they’re in a particular neighborhood or restaurant), proximity to other members, the day of the week and time of day, as well as their previous venue history or previous venue activity, to be a “venue candidate.” If persistent GPS location information is provided by a member in order to track their particular route or trajectory, a member might be classified as “on the way to a venue.” By using the GPS location information of a member to track their trajectory to a venue and then observing that the GPS signal disappeared while the member’s GPS mobile phone is still turned on, the member might be classified as “inside a venue.”

[0047] A HooZware system member’s GPS mobile phone may persistently submit their position to the HooZware system server for behavior analysis and comparison with venue locations. Alternately, a member might allow their position information only to be sent to the server at specific times.

[0048] In one application, a member is only permitted to inquire about nightclubs and other members at nightclubs during the given when their own information is provided to the HooZware system server, thus encouraging members to make their own information known as much as possible. For instance, for privacy reasons, a member might restrict that their position information only be provided to the HooZware system server on Thursdays, Fridays and Saturdays from 9:00 p.m. to 3:00 a.m. the following morning. In this case, the member would only be allowed to inquire and access statistics of other HooZware system members and nightclub characteristics during that same timeframe to see where the hot nightclubs are located. In another scenario, a member might restrict their position information to be updated Tuesdays through Saturdays between the hours of 3:00 p.m. to 3:00 a.m. In this case, the member would be allowed to inquire and access statistics of other HooZware system members and nightclubs (or bars) to additionally know which venues are the hot happy hour locations. In another scenario, a member’s position information may be sent to the HooZware system server for a period of time after they have done a nightclub search.

[0049] Promoters may place general or highly targeted advertisements with the HooZware system to be forwarded to members of the HooZware system, either asynchronously, or at strategic times, such as when the HooZware system member is requesting information on other HooZware system members or a venue or product, or the HooZware system otherwise determines that the member is a “venue or product candidate.” Members typically view such ads visually and/or audibly on their mobile phone, but members may also receive such ads via email to their home computer, postal mail to their physical address, or any other way people receive advertisements. For instance, the HooZware system may inform one or more nightclubs that the HooZware system has classified a member as a “nightclub candidate.” A nightclub that the HooZware system informs of the candidate may request that the HooZware system forward an advertisement to the HooZware system member, with an “offer number,” such that if the member arrives at their nightclub by a particular time and presents the offer number they will receive a reward, such as a discounted cover charge or drink special, etc. Thus, a nightclub can place real-time, highly targeted and focused ads with the HooZware system, which ads may, for example, be based on whether or not the nightclub is behind its attendance or drink revenue quota at a particular time. The HooZware system may also allow a nightclub to post and advertise the nightclub’s website, phone number or other marketing information provided by the nightclub.

[0050] The HooZware system may also provide statistics on the HooZware system members to taxicab companies and to other organizations interested in knowing the temporal movement patterns of the HooZware system members. In this way, taxicab might adjust where to sit at particular times on particular nights according to the crowds on hand. HooZware system members detected as leaving a nightclub may be queried through the HooZware system, whether they need a taxi. If so, the HooZware system may find a taxi for them and receive a financial benefit from either the taxi service or the member as a service fee.

[0051] HooZware system members may elect to be notified when their desired crowd demographics or nightclub characteristics, including atmosphere, band, etc., for one or more nightclubs change. For instance, if the percentage of single women at a first nightclub that a male HooZware system member is attending drops below 40%, while the percentage at a second nightclub in the area moves above 60%, the HooZware system may send the male a text message (or any other effective notification) alerting him to that fact. The HooZware system may also inform the second nightclub of the male member’s desired characteristics and suggest that the second nightclub send the male member a special offer through the HooZware system to entice him to switch nightclubs. For example, the second nightclub may then send him a targeted message asking him if he’d like a taxi, a reduced cover charge and drink special to switch from the first nightclub to the second nightclub. The HooZware system may also inform the first nightclub of the male member’s desired characteristics and suggest that the first nightclub send the male member a special offer through the HooZware system to entice him to stay. Accordingly, the HooZware system may include features for nightclubs to, in effect, set up bidding wars for clientele. For example, a nightclub that a HooZware system member is not attending may be encouraged to send a special offer to the HooZware system member to lure him or her away. Similarly, the nightclub that the HooZware system member is presently at may be encouraged to offer the HooZware system member specials, such as drink discounts, to encourage him or her to stay at their nightclub.
Dictionary.com defines “demographic” as “of or relating to demography; ‘demographic surveys’ n: a statistic characterizing human populations (or segments of human populations broken down by age or sex or income etc.).”

Thus, the Hoozware system presents useful summary numbers in useful categories to its members. Rather than merely listing people present at a venue along with all their traits and requiring a receiving member to digest the data, the Hoozware system processes the traits of those people present at a venue and presents a summary of the information which may include desired category statistics, i.e., demographics. For example, rather than just providing the following data for members present at a venue: Bill, male, 25; Amy, female, 31; Jill, female, 29; the Hoozware system may provide the following data: 3 members present; 66% female/33% male; 66% of members in age range 25-29; 50% of females in age range 25-29.

The Hoozware system may allow a particular member to register with the Hoozware system or with a particular nightclub as a “preferred customer.” For instance, a heavy drinker, or beautiful woman, may be registered as a preferred customer by a nightclub. Such registration allows the nightclub to be alerted when the preferred customer is nearby and so the nightclub may send them a special targeted incentive, via the Hoozware system, to encourage the preferred customer to come to their nightclub.

Much has been described thus far regarding the services that the Hoozware system can provide to a venue, such as a nightclub. However, the Hoozware system can provide more value to a nightclub as the member base and amount and quality of data provided by the members of the Hoozware system increase. Thus, the Hoozware system may provide reward incentives to encourage people with GPS mobile phones to: opt into the Hoozware system, make their location known to the Hoozware system server for as long as possible, provide their personal data, post useful information regarding nightclubs they are attending or recently attended, etc. Exemplary reward incentives which may be provided to Hoozware system members are described below.

Hoozware system members may be rewarded, financially or otherwise, for contributing information. For instance, Hoozware system members may be rewarded more if they permit their GPS mobile phone to update their position more time throughout the week. Other rewardable contributions may include: confirming that they’ve entered a particular nightclub; posting their personal data; frequency of use of the Hoozware system; posting of comments, photos, movie/video clips, audio clips, voicemails, emails, and the like from the nightclub, etc. Hoozware system members may receive more rewards based on the quality of their postings, according to amount of use or ratings as determined by inquiring Hoozware system members, or as determined by other means. Rewards may include sharing of Hoozware system financial profits. In this way, the Hoozware system is a co-op, where the most loyal, contributing members receive the most rewards. Other rewards may include incentives offered by the nightclubs, discounted phone bills, airline miles, store credits, drink specials, cover charge specials, Hoozware system honors, and the like.

As mentioned previously, the Hoozware system tracks the position of its members and compiles statistics and demographic information about the members that are attending nightclubs. The Hoozware system makes certain information and statistics about the members available, either directly or indirectly, to the nightclubs, in addition to other Hoozware system members. For example, using the GPS location of its members, the Hoozware system computer program running on the Hoozware system server determines whether or not to classify a member as attending one of the nightclubs at a point in time. Other Hoozware system members may then receive information informing them of the number of members in attendance at each nightclub (i.e., the minimum number of people there) and even an estimate of the total number of people in attendance, which additionally accounts for non-Hoozware system members.

Hoozware system members can use the Hoozware system to determine before going out for the evening, or even while in attendance at one nightclub, which other nightclub has a “desirable crowd.” At minimum, an “inquiring member” can receive from the Hoozware system the number of people known to be in attendance at each nightclub. Typically, if the inquiring member has provided their own demographic information they can also receive a compilation of similar demographic information of the crowd at each nightclub. Under certain circumstances, a member may also be allowed to “drill down” and review more detailed information related to the personal profile of a particular Hoozware system member, where the personal profile includes personal data.

Members using the Hoozware system to help them determine which nightclub to attend may receive characteristics about the nightclubs, as well as, information about the crowds in attendance at the nightclubs, including crowd sizes, other demographics, attendee photos, and the like. Hoozware system members may also use their mobile phone, PDA, home computer, etc., to post their own comments about a club they’re attending or attended recently. Hoozware system members may also post geotagged data for a nightclub (that is, data associated with the geographical location of a particular nightclub), including photos, movie/video clips from the nightclub, sound clips (e.g., of the DJ, band, sound system, etc.), and the like, which helps other members to get a better sense of the nightclub atmosphere, the type of music being played, the type of clientele in attendance, the lighting, and the like.

Members may inquire and receive information about the nightclubs in textual form, graphical form, auditory form, or a combination. In one embodiment, a Hoozware system member launches the Hoozware system application on their GPS mobile phone. They may narrow the nightclub search space by selecting a desired city, with an optional search radius. Alternately, they could narrow a nightclub search space by defining a geographical search space using landmarks, such as streets, bridges, rivers, buildings, county lines, state lines, other geotagged objects and the like, or distances from such landmarks. Hoozware system members may direct their nightclub search by listing in decreasing order of preference, or listing with weighting factors, what they feel most important to them when searching for a desired nightclub at that time. For instance, as the most preferred search criterion, a member might request a nightclub with the most people; as a second preferred search criterion a member might request the highest ratio of single heterosexual women to men; as a third preferred search criterion a member might request the average age to be 25-29; as a fourth preferred search criterion a member might request a live band; and as a fifth preferred search criterion a member might want the club to be within a five mile radius of where he or she is having dinner.
The computer program with computer algorithm running on the Hoozware system server digests data about each nightclub, including data provided by other Hoozware system members, data provided by the nightclub itself (such as whether they have a live band), and data available from other sources, and ranks the nightclubs in the member’s selected search space based on the preferential criteria defined by the member (such as provided by the example in the previous paragraph). In one embodiment, if a Hoozware system inquiring member specified a particular city as the desired search space, a graphical map appears on the inquiring member’s GPS mobile phone display with icons located on the map representing nightclubs. The nightclub scoring the highest rank by the Hoozware system server may be displayed with a red color (i.e., “hot!”); the next highest rank may be displayed with a color closer to orange; etc.; with the lowest ranking nightclub being displayed with a blue color (i.e., “cold.”). The map may be zoomed and scrolled to provide more detailed information about a particular nightclub. As an alternative to, or in combination with the map-based display, a text-based list of nightclubs with score ranking may be displayed. A particular nightclub may also be specifically selected by the inquiring member in order to receive more details about that nightclub. An example of specific details that an inquiring Hoozware system member might receive is: (1) 347 Hoozware system members; 412 total estimated attendees; (2) 63% single heterosexual women; (3) 28 years average age; (4) 80’s cover band started at 10:00 p.m. and (5) 3.7 miles away; approximately 10 minutes by taxi.

The total number of attendees may be determined by a variety of estimation methods. By estimation, it is intended that from a known measurement, a calculated value is obtained based on an algorithm. For instance, if previously the total number of attendees at a nightclub was counted by the nightclub or by another organization, and compared with the number of Hoozware system members at that nightclub to establish a ratio (total attendees/number of members), then that same ratio could be applied to (multiplied by) the number of Hoozware system members on another night to estimate the total number of nightclub attendees. This same technique could similarly be applied to estimate other totals for a nightclub, such as the total number of single women, the ratio of women to men, etc.

Hoozware system members may define different desirable “mood” profiles, where depending on the member’s mood, they may specify different nightclub rankings. For instance, a male Hoozware system member might define his default mood as “Meeting women,” which specifies the most preferred search criterion as “The largest percentage of single females,” and a second preferred search criterion as “Hip hop DJ.” The member might define a second mood profile as “Hanging with the boys,” with the most preferred search criterion as “Drinks special,” and the second preferred search criterion as “Pool table.”

The computer algorithm that ranks the nightclubs for each member may employ search and ranking algorithms, such as provided by companies like Google, Yahoo!, Microsoft, Ask Jeeves, and the like. The computer algorithm may also employ classification algorithms, including but not limited to statistical classification techniques (including Bayesian Decision Theory, etc.), vector quantizers, neural network algorithms, other Computer Science search and ranking algorithms, and the like.

Typical inputs to the computer algorithm include data such as: member traits, nightclub demographics and nightclub characteristics. Member traits are personal features, beliefs, lifestyles, etc. of a member that are typically either inherited or chosen by the member. Member traits typically comprise: age, sex, sexual orientation and preference, education, race, religion, smoker/non-smoker, marital status (e.g., single/married/committed/divorced), parental status, financial status, occupation, home zip code, political affiliation, pictures, both direct and anonymous contact information, friend status, group status, as well as other online dating categories including physical attributes (e.g., height, weight, eye color, hair color, balding, body type, etc.).

Nightclub demographics comprise statistics of the member population at a nightclub. The nightclub demographics typically comprise: the number of members in attendance at a nightclub, the number of members plus estimated non-members in attendance, as well as, statistics of the trait categories of the members, where the statistics may include the number and percentage of members possessing a particular trait.

Nightclub characteristics are features, rules, etc. that an attendee may find important, attractive or objectionable about a nightclub, other than aspects directly attributable to the other clientele in attendance. Nightclub characteristics typically comprise: location, type of music (e.g., radio, CD, DJ, band, etc.), genre of music (e.g., rock, classical, country, jazz, easy listening, 70’s, 80’s, 90’s, etc.), atmosphere (subjective coolness, romantic/not romantic, lighted/dark, clear/smoky/hazy, loud/quiet, cold/hot, cramped/open, etc.), cost per cover charge, cover charge, attire (e.g., casual, business casual, formal, etc.), expensive/cheap, drinks/food available, drink specials, pool table, dancing/no dancing, coat check, closing time, website, member-supplied postings (e.g., text ratings and comments/photos/audio clips/video clips, estimated number of attendees, estimated age range, estimated ratio of women to men), etc.

The data input to the computer algorithm may include weighting factors. The weighting factors may be set by the member to indicate the relative importance of a portion of the data. The weighting factors may also be set automatically, for example, based on how old the member postings are.

To assist nightclubs to efficiently target members to whom to send their promotions, the Hoozware system server (a.k.a., data processor, computer) tracks member behaviors. Member behaviors typically comprise: prior types of accepted promotions, spending habits, drinking habits, venue attendance habits (e.g., the venue the member is at now, venues the member frequents), temporal habits, parking habits (e.g., where the member parks before going to a venue), walking habits (e.g., the path the member takes in going to a venue), where the member eats before going to a venue, types of products the member buys, number of rewards points, particular venue or Hoozware premier status, Hoozware member usage frequency, etc.

To help a member classify their various inclinations, the Hoozware system allows members to define “moods” or select previously defined moods. Typical mood categories comprise: prowl, ladies/guys night, rowdy, quiet, dance, drink, pool, chat, live music, comedy, happy hour, sports, drag, etc. Members typically define their moods by logging into the Hoozware system server from their home computer; although, some mood functionality may be accessed using their mobile phone. When defining a mood, a member typi-
cally selects nightclub attendee demographics and traits and nightclub characteristics, typically using a set of drop-down boxes, radio buttons, and the like. Additionally, the member may use drop-down boxes or fill-in boxes to enter weighting factors for each of the selected demographics, traits and characteristics. If no weighting factors are entered, the HooZware system server typically uses default weightings, such as equal weighting, for each demographic, trait and characteristic. For instance, a male member may define his “prowl” mood to include and highly weight the demographic categories covering the number of non-committed women between the ages of 25 and 35. His prowl mood may also assign a lower weight- ing to dancing as a nightclub characteristic. A woman member might define her “chat” mood to include and equally weight a demographic preference for few men and characteristics of quiet country music, no cover and cheap drinks.

When a nightclub (or in general, a “promoter,” which is used here to include “venues” and “sponsors”) wants to send a promotion to a member, the nightclub member may access the HooZware system server (typically by logging into the HooZware website from an office computer) and specify which promotion they would like to be sent to a subset of members which is associated with one or more desired demographics or which exhibits a desired behavior.

When a member is trying to decide which nightclub (or in general, which venue) to attend, they may access the HooZware system server, typically using their mobile phone. A member may communicate with the HooZware system server using a WAP or other mobile browser, SMS (short message service) or MMS (multimedia messaging service), emailing, running a custom HooZware application on their mobile phone (which may include JAVA, or be written for or using BREW, Symbian, RIM, Microsoft, Windows CE, Palm, EPOC, FLEXOS, OS/9, JavaOS, etc.), and the like. When the HooZware system server receives a member request for a list of nightclubs that best match the member’s selected “mood,” the server performs the search calculation and returns the nightclub list, along with detailed nightclub demographics and characteristic information for the member to view. Typically, along with the ordered nightclub list, the HooZware system server will also return relevant nightclub or sponsor promotions to the member.

Present GPS technology used in mobile phones requires line-of-sight communication with multiple satellites. Accordingly, when a HooZware system member enters a nightclub typically their GPS signal will be lost. When a HooZware system member’s GPS signal disappears, the computer algorithm of the HooZware system server decides what happened to the HooZware system member. For example, if the HooZware system server can no longer communicate with the member’s GPS mobile phone, the computer algorithm running on the server might determine that the mobile phone was turned off. If the HooZware system server can still communicate with the member’s GPRS mobile phone but the GPS mobile phone can’t provide position information, the computer algorithm running on the server might hypothesize that the member has walked inside a building. At that point, the computer algorithm running on the HooZware system server might extrapolate, or otherwise estimate, using previous position data points in time, as well as any other relevant data available (such as previous history or patterns of behavior), whether the HooZware system member was walking toward the entrance of a nightclub when the member’s GPS position information disappeared such that the member should be classified as being in that nightclub. When the computer algorithm running on the HooZware system server estimates that a member has entered a particular nightclub, it may send a query to the member asking them if indeed they are in the classified nightclub. The HooZware system member may respond with Yes or No, may provide an alternate location, or may provide another response. If the computer algorithm running on the HooZware system server receives an affirmative response from the HooZware system member, that member is classified as a confirmed attendee at the nightclub. Typically, if no response is received, the computer algorithm running on the HooZware system server classifies that member as an unconfirmed attendee at the estimated nightclub.

When a HooZware system member is classified by the computer algorithm running on the HooZware system server as being at a particular nightclub, if the member takes a picture, records a movie/video clip, records an audio clip, types a text message, types an email, records a voicemail, and the like with their GPS mobile phone, the HooZware system application on their mobile phone may insert a prompt requesting that they post that geotagged information to the HooZware system server; thus making it very easy and convenient for HooZware system members in attendance at a nightclub to provide real-time geotagged information about the nightclub for other HooZware system members to receive.

The HooZware system may also offer social networking and dating services to its members. For instance, HooZware system software may allow members to enter personal data about themselves into their own personal profile, including but not limited to attributes commonly included in dating service surveys, such as the member’s sex, age, physical attributes, interests, etc., and also similar types of personal data about what they would like to see in people they would like to meet at a nightclub. Typically, the HooZware system requires a member to enter their own personal data first in order to be allowed to receive similar types of data about other HooZware system members. For example, if a member entered that he was a male, between 25 and 29 years of age, and included a picture, then when that member was determined by the HooZware system using the member’s GPS position to be at a particular nightclub, the member’s data would be compiled into the statistics of all members classified as attending that nightclub. Such compiled statistical data would be receivable by other members who also provided their sex, age and picture. If a member only provided a subset of personal data (such as their age) they typically would only be allowed to receive a similar subset of compiled statistical data of the members (such as the ages) in attendance at the nightclub.

If a member specified in their personal profile that they would like to be contacted by other HooZware system members, they can specify under what circumstances and how they would prefer to be contacted, including by voice on their mobile phone, text message on their mobile phone, voicemail, email, physical mail, etc., either directly or anonymously via the HooZware system server. If they request anonymous contact, then an inquiring member would use the preferred method of contact; however, the content of the contact attempt would first go to the HooZware system server. The member to be contacted is then sent the content of the contact attempt from the inquiring member without revealing the direct contact information of either member to the other. Typically included in the content anonymously sent from one member to the other is a capability for allowing each member
to mutually share one or more elements of their direct contact information with the other. For example, if a first member elects to mutually share their mobile phone number, the second member is informed of that election in content anonymously provided to the second member. Until the second member also elects to mutually share their mobile phone number, neither party will be allowed to view the mobile phone number of the other. Of course, the first member may include their mobile phone number, or other direct contact information, directly in the content anonymously sent to the second member, or vice versa. A member may specify that only Hoozware system members at the nightclub they’re at be allowed to contact them; or alternatively, a member may specify that prospective attendees may be allowed to contact them. The Hoozware system may charge a service fee for Hoozware system members to gain access to another Hoozware system member’s personal profile or information related thereto, assuming that the profile or information was specified by the member to be accessible. The Hoozware system may also work with, provide information to, or receive information from, other online or mobile dating services, and receive financial benefits or other benefits therefor.

The following description details one embodiment of the subject invention.

1. Introduction

The Hoozware system consists of server and mobile device components that work together to implement mobile-centric venue information and marketing services. The system leverages member-driven content, including location-based commentary and demographics, to promote community amongst members and to provide marketing opportunities for venues and sponsors. Targeted venues include night clubs, sports bars and music scenes where people aggregate for entertainment and socializing.

2. Feature Summary

The system is used by tracked members, registered venues, registered sponsors, and system administrators. Members carry mobile devices which enable location tracking by the system, provide access to demographic and other information relevant to their decisions on which venues to visit, and facilitate interaction with other members. Venues and sponsors access the system via the desktop (rather than mobile devices) in order to query demographics, set up marketing campaigns, and monitor campaign results. Venues may also publish entertainment schedules and other information that members access from their mobile devices. Venues and sponsors are both promoters, such that referring to a promoter can mean either a venue or a sponsor that is interested in providing a promotion to a member.

Members use the system to access venue information and to participate in an incentive rewards program.

3.1. Venue Information

Information includes venue descriptions, member commentary, and population data. Venue descriptions are supplied by venues (or acquired from a third party database), and may include music schedules and other events. Member commentary may include ratings, reviews, and current blogs, possibly with multimedia content. Population data may include current demographics and lists of members present.

3.2. Rewards Program

The incentive rewards program allows members to accumulate points for various actions and to exchange these points for discounted products and services from sponsors. Reward items may include drinks and cover charges at clubs, meals at restaurants, limousine services, hotel stays, sports merchandise, music downloads, electronics, event tickets, airline tickets, cash, shopping discounts at department stores or other retailers, etc.

A member may receive reward points for purchases at a venue or from a sponsor, whether or not the purchases are in response to a venue or sponsor promotion. While the six purchase scenarios below refer to purchases at venues, the same scenarios apply to purchases from sponsors.

To receive points in a first scenario that doesn’t require any cooperation from venues a member may keep purchase receipts, enter them on the Hoozware website to generate a receipt-submission form (typically which includes an associated receipt-submission ID), printout the receipt-submission form and mail it, along with the receipts, to a Hoozware mailbox.

In a second scenario that does require cooperation from the venues, immediately after a purchase a member enters the amount of the purchase into the Hoozware application running on their mobile phone and then hands their mobile phone to the cashier who then reviews the purchase amount, and if correct, enters their unique cashier password into the member’s mobile phone and presses the SEND button. The amount of the purchase and the cashier’s identity is sent to the Hoozware system and optionally also sent to the venue for the venue’s records.

In a third scenario that also requires cooperation of the venue, at the time of purchase the member gives the cashier the member’s unique rewards ID number. The venue then associates the member’s rewards ID with the purchase amount and provides the information to the Hoozware system. The member may provide their rewards ID number by any convenient method, including entering the number into a data terminal, providing a rewards card or transmitting the rewards number via a phone.

In a fourth scenario, the member’s rewards ID number and payment information, such as credit card number or debit card number, may both be transmitted by the member’s mobile phone, such as by wireless transmission.

In a fifth scenario, the member uses their mobile phone to call a venue-rewards-credit telephone number. The Hoozware application communicates the member’s name and minimum amount of the credit card number or debit card number information in order for the venue to associate charges made at the venue with the member and report the information about the products purchased by the member to the Hoozware system.

In a sixth scenario, when a purchase is made using the member’s credit card or debit card, the associated credit card company or bank sends confirmation to the member’s mobile phone. The Hoozware mobile application captures the confirmation and submits item(s) purchased, venue, time, purchase amount(s) and other important information to the Hoozware system server which records the information and updates member behaviors, rewards points and statuses (such as elite status) with the venues and sponsors that the purchases relate to. Alternately, the credit card company or bank may send confirmation to a separate website, the member’s home computer, the Hoozware system server, and the like, from where the member then requests rewards credit for the purchases.
3.3. Accounts
To establish accounts, new members supply the following information:

username, password, first name, last name, email, mobile number

Usernames must be unique to individuals in the system. These data are used for account access, maintenance, and communication. They are not disclosed to third parties.

Reward points are given for successful registration. Additional reward points are given when other members are referred.

Members describe themselves by submitting personal profiles consisting of demographic and personal fields. The system also records member behavior statistics in behavior fields.

Demographic fields list member traits that can be statistically combined to provide demographics information for anonymous population tracking and targeted marketing. These fields are:

- general: birthday, gender, education, occupation, marital status, parental status, home zip code, political affiliation, salary range
- sports: leagues, teams/players
- music: genres, performers
- tags: other member input, such as interests

Any presentation of demographic information to venues, sponsors, or other members is not identifiable with specific individuals.

Personal fields are used for social networking and commentary attribution, and do identify specific individuals. These fields are:

- nickname, personal statement, photo
- Nicknames must be unique to individuals in the system and should be different from usernames. Personal statements are textual introductions by the members. Default photos may be system-supplied defaults if not replaced by the members.
- Behavior field records prior types of accepted promotions, spending habits, drinking habits, attendance habits, temporal habits, parking and walking habits, etc.
- 3.5. Groups

Members may organize themselves into groups to facilitate common personal visibility and messaging. A group consists of:

- groupname, leader (nickname), member list (nicknames)

Groupnames must be unique to groups in the system. Each group has a leader who is responsible for creating and maintaining the list of its members. Additions to the list require consent of both the member and the leader. Deletions from the list may be issued by either.

If group filtering is enabled, personal fields of a member’s profile are visible to other members only if they belong to a common group. Members may belong to more than one group simultaneously.

A member may request that they be invisible to a specific member while being visible to other members.

During certain periods, member locations may be tracked so that their presence at or near venues is known to the system. The system may consolidate and present real-time, anonymous, venue demographic data to other members. The system may also, subject to personal visibility control, display a list of which members are present at each venue using their personal fields.

Members must select a default tracking window from the following:

<table>
<thead>
<tr>
<th>Tracking Window</th>

<tr>
<td>Super Party Hoozware</td>
<td>Combination of Happy Hour and Night Flight windows.</td>
</tr>
<tr>
<td>Ultimate Party Hoozware</td>
<td>Continuous window.</td>
</tr>
</tbody>
</table>

There may also be special sports windows, for instance, to allow members to search venues to watch playoff games at times that don’t fall into one of the other tracking windows.

Tracking is automatically turned on at the beginning of a member’s window and turned off at the end of a member’s window. If a member accesses the system for real-time demographics outside of their default window, then the shortest enclosing window is automatically applied to their tracking schedule for that day. For example, if a member whose default window is Night Flight checks current demographics on Friday at 4 pm, then they are automatically subscribed to Happy Hour tracking until 8 pm (for that day only), at which time their Night Flight default continues to track until 3 am.

Reward points are given based on the number of hours a member is tracked.

3.7. Commentary
Members are encouraged to contribute comments on venues. These take the form of ratings, reviews, and blogs. Ratings and reviews are overall impressions of the venue. Blogs are typically shorter posts with more immediate value, e.g., tonight’s scene rocks. Multimedia content may be included as well.

Reward points are given based on the number and quality of a member’s comments. Quality is measured by usefulness as deemed by other members.

3.8. Privacy
These policies shall be observed to respect member privacy while offering relevant information to users of the system.

3.8.1. Tracking Control
Powering off a mobile device prevents tracking, but only until the device is powered on again. However, an interface shall be provided to allow a member to disable tracking in software and have this be effective until 3 am the next day (remainder of the daily cycle) or for a specified multi-day period (vacation stop). The interface also allows the member to reverse this selection.

3.8.2. Personal Visibility Control
Members may choose the exposure level for their personal fields. Personal visibility may be set to: seen by all (no group filtering), seen only by groups (apply group filtering), or seen by none (hide). If someone is being tracked but does not appear on a list of members present at a venue, they are either not present or just personally invisible to the viewer; these possibilities are indistinguishable to the viewer.

3.8.3. Status
Indicators are provided to members so they may easily determine their tracking status (on/off) and personal visibility status (all, groups, none) at any time.
3.8.4. Protection
Member behavior is not observable beyond intended members of the system. To protect against sniffer attacks, member tracking packets are encrypted.

Demographic data are not easily identifiable with specific individuals. To protect against geographic/demographic inference methods, demographic data may be obscured for venue population counts below a threshold.

Member lists are not provided for locations other than venues.

3.8.5. History
Exact trajectory histories of tracked members are not retained by the system, but some statistics may be accumulated.

User Interface
Members access the system from both the desktop and their mobile device. Functionality is organized into the following sections which correspond roughly to screens or pages:

Setup/Maintenance:
- Open/close account (desktop-only)
- Update profile information (desktop-only)
- Update tracking window
- Update/manage groups

Privacy Control:
- Update tracking
- Update personal visibility

Venue Search:
- Edit "moods" and search types (i.e., ranking criteria)
  - closest location to current location
  - most offers available
  - most members present
  - most M members present
  - most F members present
  - highest rating from other member's
  - best match to custom demographic
- One-time search (mobile-only)
- Continuous search; optionally alert when rank changes (mobile-only)
- List/map of search results (mobile-only)
- Select a venue to view

Venue View:
- Venue description
- Commentary—read, grade, add new
- Current demographics (mobile-only)
- Current members present (mobile-only)
- Current offers

Member Search:
- Contact list—groups, other people
- One-time search of member locations (mobile-only)
- Continuous search; optionally alert when location changes (mobile-only)
- List/map of search results (mobile-only)
- Select a venue to view

Member View:
- Personal fields
- Current location (mobile-only)
- Contributed commentary

Offer Search:
- Reward points available
- Current offers (rewards/promotions) with different sorting options
- Select an offer to view
- Offer View:
  - Description.
  - Use offer; creates barcode and/or number code; deducts points if a reward
- Delete offer

4. Guests
Non-members may access the system via their desktop computer as guests; however, they can access only limited features. Guests do not have access to the mobile device interface. Typically, a guest sees the same top-level interfaces as members; however, when attempting to access information limited to members only, the guest is informed that the information requested is for members only and the system then prompts the guest to register. Typically, guests can see a list of venues and access venue descriptions supplied by the venues. Typically, guests cannot view venue demographics, venue characteristics provided by members or personal profile information. Guests may be permitted to view venue or sponsor promotions, but are unable to redeem such promotions and do not receive rewards.

5. Venues
Venues access the system to update their business description and manage their marketing campaigns.

5.1. Description
Initially, venue descriptions will be generated from available databases, but venues may choose to update/correct their own entries. Descriptions may include basic contact information, hours, charges, event schedules, and statements from the venues.

5.2. Marketing
There are two ways that venues can market to members: First, they may place standard advertisements on the desktop web interface seen by members and guests. This is implemented using a third-party pay-per-click advertising system such as Google AdSense. Venues setup these campaigns through the third party.

The other, more powerful way, is to market directly to members using system offers (rewards or promotions). Marketing campaigns may be customized according to numerous factors such as demographics, location, time, and VIP status. In a pay-for-performance model, venues would be charged a placement fee only when the offer is used by a member.

5.3. User Interface
Venues access the system from the desktop. Functionality is organized into the following sections:

Setup/Maintenance:
- Open/close account
- Update description
- Marketing:
  - Campaign summary
  - Create/delete a campaign
  - Select a campaign to view
  - Campaign View:
    - Offer description
    - Offer type—reward or promotion
    - Point level, if reward
  - Limitations—reward or promotion
- Target location
- Target profile
- Target patronage—VIP or all
- Target time
- Usage statistics
Venues may provide venue descriptions that are accessible by both members and guests (non-members). Venues may post advertisements on a Hoozware website. Venues may provide promotions via the Hoozware system to a member of a demographic or behavioral pattern. Venues may receive and review member demographics and behaviors and select a desired demographic or behavioral pattern to which to send a promotion. Alternatively, the venues may, without receiving and reviewing any information from the Hoozware system, provide instructions to the system regarding what types of demographics and behavioral patterns they wish to target, and when they would like promotions to be distributed, and let the Hoozware system make the detailed promotional distribution decisions.

Typically, a venue has Hoozware Promoter Application software running on an office computer or mobile phone, or uses a web browser to access Hoozware Promoter Application software running on the Hoozware system server. The venue enters their promotion, selects one or more desired demographics and enters the number of members in that demographic to which the venue wants the promotion sent. The promotion, desired demographic and number-of-members instructions are submitted to the Hoozware system which then directs the venue's promotion to the desired number of members belonging to the demographic.

The promotions may be time critical and thus have a short expiration day and time associated with them. For instance, if a venue desires more attendees now, they may place a promotion through the Hoozware system that expires in 30 minutes or is valid only for the next 50 entrants. Allowing venues to efficiently promote to potential attendees who are known by the position of their mobile phone to already be in the area and based on their demographics and prior behavior to be likely attendee candidates is a major advantage of the Hoozware system.

Members typically receive venue promotions in a Hoozware "promotion mailbox" on their mobile phone. The member may set up the promotion mailbox to provide an indication that there are promotions available, and optionally, how many promotions are available. The indication may be a media signal, such as an audible tone, a visual signal a tactile signal, a combination of signals, etc. Different indications may be configured to indicate promotions of different types, from different venues, and the like. The member may alternately set up the promotion mailbox to do nothing until the member calls a promotion-mailbox phone number to request that all promotions be sent at that time. The promotions may also be accessed from a home or office computer, etc.

Members may use their communication device (e.g., mobile phone or home computer, etc.) to view which promotions are currently being offered to them. Members falling within different demographic groups or exhibiting different behaviors will typically see different promotions offered.

Typically, venues can have promotions (1) sent directly to the mobile phone of one or a group of members and (2) posted on the Hoozware system server where only promotions relevant to a particular member (for instance, based on their demographics and behaviors) will be viewable by that member when they access the Hoozware system server for their promotions.

A venue may offer promotional coupons to a larger number of members than the venue desires to accept. For instance, a venue may send a coupon (via the Hoozware system server) for "no cover charge" to 100 members of a desired demographic group or behavior, but the venue may specify that only the first 10 coupons presented will be accepted. In one embodiment, members may access in real time from their mobile phone or home computer how many coupons will still be accepted at that time. In the case where the promotion requires members to use points for a coupon, a member may be allowed to "reserve" a coupon in advance. Such a reservation immediately debits the member's rewards points, but assures the member that their coupon will be valid to redeem the promotion when they arrive.

In one embodiment for redeeming a venue's promotion at the venue, the member shows the coupon (which was sent to them on behalf of the venue) displayed on their mobile phone's screen to a venue representative. The coupon has a coupon identifier (ID) associated with it. The display on their mobile phone says to, press "OK" to "Validate" the coupon. The venue representative presses OK which causes the Mobile Application to communicate the coupon ID to the Hoozware system server (data processor). The Hoozware system server then sends a "Confirmation Code" to one or more communication devices of the venue's choice. For example, a Confirmation Code may be text messaged to the venue representative's mobile phone informing the venue representative to accept the coupon. Simultaneously, a Confirmation Code may be emailed to the Promoter Application to log the transaction for future reference.

When a member uses their communication device to check in real time how many coupons the venue is still going to accept at that moment, in addition to being presented with the number of coupons remaining, they may be prompted to (1) press "OK" to validate the coupon now or (2) press "1" to reserve the coupon in advance.

Members typically receive reward points for accepting a promotion, attending a venue, spending money at a venue, and the like. Refer to the Rewards Program in Section 3.2 for more information on how member may receive rewards points for purchases at venues.

Venues may track promotion acceptance or spending habits of members at their venue. One way a venue may track member acceptance of the venue's promotion is to record a member's promotion identifier (ID) that was sent along with the promotion. The member may also be required to show their personal-field photo on their mobile phone to confirm that they are the intended member.

Sponsors may provide promotions via the Hoozware system similarly to a venue. Sponsors access the Hoozware system to manage their marketing campaigns. Their features and interface are similar to that of the venues, except for the areas of venue description and VIP status. See the description above in Section 4 for Venues, and also refer to the Rewards Program in Section 3.2 for more information on how member may receive rewards points for purchases from sponsors.

Administrators have access to all stored information, including member personal fields. Administrators may send promotions to members based on vendor or sponsor...
instructions. Such instructions may request that the system send promotions to members based on the members’ demographic or behavior, the day and time, etc. Administrators also control the billing, promotion rates, etc.

[0245] Most major carriers and mobile devices are supported.
[0247] The system allows any venue to be listed. Venues may be added in bulk based on business listings/categories acquired from third party databases. For example, the system may add venues appearing in Google Local, CitySearch, SFGate, PubClub, Viator, and the like, as businesses categorized under one or more of the following:

[0248] Cocktail Bars & Lounges
[0249] Lounges & Bars
[0250] Night Clubs
[0251] Sports Bars, Lounges, & Restaurants
[0252] The following description details a second embodiment of the subject invention.
[0253] 1. Introduction
[0254] The subject Hosozware system consists of server and mobile device components that work together to implement mobile-centric club information and marketing services. The system leverages member-driven content, including location-based commentary and demographics, to promote community amongst members and to provide marketing opportunities for clubs and sponsors. Targeted clubs include night clubs, bars, and music scenes where people aggregate for entertainment and socializing.
[0255] The system is used by registered members, clubs, and sponsors, and supervisory access is supported for system administrators. Members carry mobile devices which provide access to demographic and other information on clubs, facilitate interaction with other members, and support other activities such as recording their location. Clubs and sponsors access the system via the desktop (rather than a mobile device) in order to query demographics, setup marketing campaigns, and monitor campaign results. Clubs may also publish entertainment schedules and other information that members can access.
[0256] 2. Member Features
[0257] Members use the system to access club information, meet other members, and to receive offers from clubs and sponsors.
[0258] 2.1 Club Information
[0259] Information includes club descriptions, member reviews, and population data. Club descriptions are typically supplied by clubs, and may include music schedules and other events. Member reviews may include ratings and comments, possibly with multimedia content. Population data may include current demographics and lists of members present.
[0260] 2.2 Meeting Members
[0261] Members may search for other members in the system, and attempt to contact them to arrange meetings at the clubs. Members may be interested in establishing these connections for socializing or “crushing.” The system provides communications facilities for requesting meetings, responding to requests, and selectively providing additional information.
[0262] 2.3 Offers
[0263] Members may receive promotional offers from clubs and sponsors (collectively known as marketers) for discounts on products and services. Offers may be targeted according to member profile and behavior.
[0264] Example offer items are drinks, food, cover, limousine services, hotel stays, sports merchandise, music downloads, electronics, event tickets, and shopping at department stores or other retailers.
[0265] 2.4 Privacy
[0266] Member location and profile information may be made available to clubs, sponsors, and other members in order to support targeted marketing and member-to-member interaction. Privacy from clubs and sponsors is addressed by making marketing campaigns anonymous (but possibly targeted), except for certain opt-in programs such as VIP designation. Privacy from other members is addressed by allowing visibility control of certain information.
[0267] 2.4.1 Location Data
[0268] Member attendance at clubs is recorded by the system whenever a member performs a check-in. However, the member may dynamically control which other members can access their location information. It is possible for a member to check-in to a club and, at the same time, keep their location invisible to other members. In this scenario, the member’s demographics are still added to that of other attending members for purposes of club crowd characterization, but their identities are blocked from appearing on people searches on that club. Note that any presentation of aggregate demographics for a club should be robust to trivial inference methods that may reveal such a member’s presence unintentionally.
[0269] 2.4.2 Crush Profile
[0270] Member profiles contain various information which describes themselves to the system. The information is categorized into demographic, social and crush fields. Demographic fields are used anonymously to characterize the crowd of attendees at a venue. Social fields describe members to other members in order to facilitate member interaction. Crush fields are information that may be particularly relevant for members interested in dating or relationships. Since some members may consider the crush fields to be more sensitive, explicit privacy controls are provided for this portion of the profile.
[0271] 2.4.3 History
[0272] Exact check-in histories of members will not be retained by the system, but some statistics may be accumulated.
[0273] 3. Member Interface
[0274] Members access the system from both the desktop and the mobile device. Functionality is available on both platforms unless indicated otherwise.
[0275] 3.1 Account
[0276] To establish accounts, new members supply the following information:

- Username
- Password
- First Name, Last Name
- Email
- Cellphone (number, carrier, model)

Usernames must be unique to individuals in the system. These data are used for account access, maintenance, and communication. They are not disclosed to third parties. Cellphone numbers should be validated as part of account setup (e.g. by sending confirmation code via SMS).
[0278] Opening, closing, and changing accounts are only available from the desktop.
Members describe themselves by submitting profiles consisting of demographic, social and crush fields. Demographic fields consist of the following:

- Required* Gender
- Date of Birth (present as age)
- ZIP code (present as distance from other members)

Optional: Other fields presentable in aggregate.

Social fields consist of the following:

- Nickname
- *Optional* Statement
- Media (Photo, Video, Audio)
- City of residence
- Hometown
- Interests-general
- Interests-music
- Interests-movies
- Interests-television
- Interests-books
- Interests-sports
- Interests-dance
- Interests-politics
- Favorite drink
- Ask me about
- Tell me about

Crush ("C") fields consist of the following:

- C Statement
- C Media (Photo, Video, Audio)
- About my date
- Relationship status
- Orientation
- Body type
- Height
- Smoking
- Drinking
- Ethnicity
- Religion
- Have children
- Want children
- Income
- Homeowner
- Occupation
- Education
- Zodiac

Members also configure their crush profile with filtering, privacy, and participation. Filtering indicates the criteria to apply in order to identify potential crushes (crush matches). Privacy indicates which other members may see their crush fields. Participation indicates whether the member opts-in to the crushing portion of the service. By opting-in, the member enables their crush fields to be visible according to their privacy setup, and allows the system to find crush matches according to their filtering setup.

Entering or updating profile information is generally only available only from the desktop.

Optional: Support upload of profile photo, video, audio from mobile device.

Optional: Add business card fields to profile.

3.3 My Preferences

Members may customize their interaction with the system in various ways. The customizable settings are as follows.

3.3.1 My Clubs

These are member-selected favorite clubs for convenient reference.

3.3.2 My Friends

Friends are individual members that are listed for easy access similar to a phonebook, but requiring consent from both parties. Friend lists are publicly available to other members in order to facilitate networking.

Optional: Add option to hide some or all friends.

3.3.3 My Groups

Groups consist of one or more friends that may be treated together for visibility, messaging, or other purposes.

3.3.4 My Bookmarks

Bookmarks are similar to friends, but do not require consent from both parties and are not publicly available. They are useful for easily referencing individual members prior to acceptance as a friend.

3.3.5 My Blocked

Blocked members are those designated for avoidance. A member’s location and crush profile are not visible to a blocked member, and any messages received from blocked members are discarded.

Cellphone numbers may also be blocked. This is useful for preemptively blocking people that may not have accounts yet.

3.3.6 My Filters

Filters are member-defined criteria for selecting other members. Criteria may include numerous factors involving social or crush fields. For convenience, the system may pre-define one or more common criteria that are useful to many members.

3.3.7 My Moods

Moods are member-defined criteria for ranking clubs. Criteria may include numerous factors such as club characteristics, attendee demographics, distance from starting location, and available offers. For convenience, the system may pre-define one or more common criteria that are useful to many members. Some example moods are:

- Closest
- Most members, both men and women
- Most members, men
- Most members, women
- Most members that belong to My Friends
- Most members that belong to one of My Groups
- Most members that pass one of My Filters
- Most offers
- Highest recommendation by member review
- Closest AND Live music AND Most dancing by member review
- Darts AND Pool AND Most offers
- Each mood which relies on data that may not be available (e.g., member reviews) uses the lowest scores for any missing data.

Optional: Allow weights to be associated with ranking criteria.
### 3.3.8 My Alerts

Alerts are member-defined notifications based on various triggers. Supported triggers include:

- **Top Club** Active search has identified a new top club
- **Review** Club has gotten a member review
- **Offer** Offer has been received
- **Check-in** Member has checked-in
- **Check-out** Member has checked-out
- **Message** Message has been received
- **Candidate** System has identified a new member passing a screen

### All alerts may be independently configured for:

<table>
<thead>
<tr>
<th>Status</th>
<th>Enabled or disabled</th>
</tr>
</thead>
<tbody>
<tr>
<td>Timing</td>
<td>Immediate, digest (e.g., every hour)</td>
</tr>
<tr>
<td>Channel</td>
<td>Application, text message, email</td>
</tr>
</tbody>
</table>

### 3.3.9 My Location Privacy

Location privacy determines which other members see in-check activity. Visibility may be granted by category to the following:

- **Friends**
- **Crush matches**
- **Current club**
- **Individuals (custom list)**

### 3.3.10 My Blocked

If a member is in My Blocked, any individual visibility rule for that member will be overridden and indicated as such (e.g., by graying out).

### 3.4 Club Activities

Members may perform various activities related to clubs. Features may be limited for unregistered clubs, which have no offers and have minimal descriptive information.

### 3.4.1 Club Search

Each search is configured as follows:

- **Consider only** only, registered, My Clubs, by neighborhood
- **Ranking mood** one of My Moods, customized mood

‘Consider only’ indicates which clubs are to be considered. ‘Ranking mood’ indicates the criteria used to sort the search results. If Ranking mood is None, results will be sorted alphabetically. If Ranking mood is Customized mood, it is possible to use one of My Moods as a basis for the customization. Any customized mood may be saved as a new entry to My Moods or discarded.

### 3.4.2.1 Club Detail: Crowd

If the club view was brought up by clicking on a ranked search result, the club view may also include a line indicating the club’s score on the ranking criteria.

### 3.4.8.1 Club Search: Optional

On the mobile device, clicking on a category will bring up a separate page that elaborates on that category. On the desktop, some or all of these categories may be simultaneously displayed.

### 3.4.8.5 Club Members

Visible members in attendance at the club are listed. Each member is summarized with a photo, nickname, gender, and age. Icons may be shown to convey member location and crush profile visibility (forward and reverse), as well as crush matching designation.

### 3.4.8.6 Clubs

Optionally, the listing of visible members may be restricted by selection of individual, group, bookmarks, blocked, crush matching designation, one of My Filters, or by a customized filter. If using a customized filter, it is possible to use one of My Filters as a basis for the customization. Any customized filter may be saved as a new entry to My Filters or discarded. The listing of visible members may also be restricted to those having photos.

### 3.4.8.7 Clubs

Clicking on a listed member brings up the “member view” as a separate page.

### 3.4.8.8 Clubs

The current demographics of the attending members are also available, possibly via an extra button selection. The demographics data are given as follows:

- **Gender**: Men(%,), Women(%,)
- **Age**: Typical(#), Spread=±#/–#, Min=–#, Max=#
- **Distance**: Typical=#, Spread=±#/–#, Min=–#, Max=#

Note that distance refers to how many miles away attending members live from the viewing member’s residence. Locations are typically assigned as the centroids of zip codes.

### 3.4.8.9 Clubs

Optional: Other fields presentable in aggregate.

### 3.4.8.10 Clubs

Optional: Show map of residence clusters.
Demographic trends over time may also be displayed in a chart. Each chart is specified by a time period and a demographic:

- **Time period** Today, or last 7, 30 or 90 days (pick day of week or all)
- **Demographic** By gender, age, or distance

Member counts segmented by the demographic are then displayed versus time of day for an average day in the time period.

**Club Detail: Reviews**
Reviews of clubs are submitted by members. Each review may have the following sections:

**Ratings**
- Rate the club on these factors:
  - Crowded: 1 = empty, 2 = so-so, 3 = packed
  - Age: 1 = 20s, 2 = 30s, 3 = 40s & up
  - Gender Mix: 1 = mostly M, 2 = even, 3 = mostly W
  - Dance: 1 = nobody, 2 = some, 3 = everyone

**Comments**
- Text comments
- Photo snapshot, possibly with text
- Video video snippet, possibly with text
- Audio audio snippet, possibly with text

**Optional: Rating for music.**

Reviews are displayed based on which review sections are of interest.

If ratings are selected, then the average for each rating (one hour weighting ramp peaking at the most recent rating) is provided, with indication of how many ratings are included. Ratings are displayed anonymously (i.e., without attribution to member). A graphing option may also be provided.

If comments or other media are selected, the relevant reviews are listed and sorted reverse chronologically. For each review, the time stamp is given and the contributing member is identified, possibly characterized by their historical contribution level.

**Club Detail: Offers**
Offers from the club are displayed similarly to the general offers interface described later, but only include those that come from this club.

**Club Detail: Description**
The club description may include the following components:

- **Contact**
  - Address, phone, fax, website
- **Summary**
  - Text description
- **Features**
  - Availability of pool table, darts, tv, etc.
- **Media**
  - Photo, video, audio
- **Events**
  - Calendar of events

Directions to the club are also provided. Optionally, a map may be supplied.

**Club Actions**
For a particular club, members may perform certain actions. These actions are accessible from various interfaces as appropriate:

- Add to My Clubs
- Check-in
- Check-out
- Post Review

**Add to My Clubs**
This adds the club to the member’s list of favorites.

**Check-in**
This checks-in the member at a club. As part of the check-in, the member is prompted to submit a review, with the ratings section being mandatory. At registered clubs, check-ins qualify the member for automatic spins for 2-for-1 or free drink specials. A member may check-in again at the same club in order to refresh their presence (typically after two hours).

**Check-Out**
This checks-out the member from the current club. If no explicit check-out is performed, the member is automatically checked-out two hours after their last check-in.

**Post Review**
This enables a member to post a review on a club.

**Member Activities**
Member-related activities include searching for members, viewing member pages, and actions related to members such as sending messages.

**Member Search**
Each search is configured as follows:

- Select all, My Friends, one of My Groups, My Bookmarks, My Blocked, crush matching designation, one of My Filters, customized filter

‘Select’ indicates which set of members to search for. If select is customized filter, it is possible to use one of My Filters as a basis for the customization. Any customized filter may be saved as a new entry to My Filters or discarded. Optionally, selected members may be further restricted to those having photos.

Search results are sorted by proximity to the member’s starting location (closest first, and members with unknown locations alphabetically at the end). Results are presented as an indexed list or, optionally, as a map with the indices plotted. Each member result is shown with their proximity in miles.

Optional: Select ‘checked’, i.e., manual selection of a subset of search results as input into subsequent search.

There is also a member lookup feature which allows finding a member based on name, email, or cell phone number.

Clicking on a particular member brings up their details in the member view.

Member gender, age, and social profile are displayed, as well as current location, crush profile, and primary photo as available. Accessing other media may require navigation to linked pages. Icons may be shown to convey member location and crush profile visibility (forward and reverse),
as well as crush matching designation. The reviews submitted by this member are also available.

Optional: Also show testimonials if supported.

3.5.3 Member Actions

When viewing a member’s page, the following actions are supported:

<table>
<thead>
<tr>
<th>Action</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add as Friend</td>
<td>Add to My Friends</td>
</tr>
<tr>
<td>Add to Group</td>
<td>Add to group in My Groups</td>
</tr>
<tr>
<td>Bookmark</td>
<td>Add to My Bookmarks</td>
</tr>
<tr>
<td>Block</td>
<td>Add to My Blocked</td>
</tr>
<tr>
<td>Create Alert</td>
<td>Create alert for My Alerts</td>
</tr>
<tr>
<td>Change Privacy</td>
<td>Modify privacy of location or crush profile</td>
</tr>
<tr>
<td>Send Message</td>
<td>Send a message</td>
</tr>
<tr>
<td>Report Abuse</td>
<td>Flag inappropriate material</td>
</tr>
</tbody>
</table>

Optional: Support testimonials.

3.6 Message Center

Members may exchange messages with other members. Messages consist of a subject, a body (including prefix/postfix), and optional flags and attachments.

3.6.1 Composing Messages

Messages are constructed primarily by selecting quick text phrases. Selecting, custom for any component allows the user to enter arbitrary text:

Subject:

Rockin’<club>
Here<club>
Gon<club>
Chat<topic: null or part of recipient social fields>

Wink! Special message with no other components

CUSTOM

Body Prefix (Salutation):

*PRESET* Member pre-defined (e.g. Hi <recipient first name>)

CUSTOM

Body:

Check it out.
Let’s talk.
You’re cute.
You’re hot.
Meet at the [bar|door|spot|*CUSTOM] in [5|15|30mins]?
Call me at <sender cellphone number>
Buy you a drink?
thanks.
Maybe later.
OK

(optional) but in [5|15|30mins].

*PRESET1* Member pre-defined (e.g. Wuzzup?)

*PRESET2*

*PRESET3*

*CUSTOM*

Body Postfix (Signature):

*PRESET* Member pre-defined (e.g. <sender first name>)

CUSTOM

Flags:

- Request crush profile
- Attachments:
- Media
- Messages may be sent to individuals or groups. Some quick text choices may be restricted based on context (e.g., allow “we match!” only when mutual crush).

Optional: Identify supported media sources from amongst server repository, desktop file system, cellphone file system, capture at composition.

3.6.2 Reading Messages

Members view the subject and body of a message as plain text. Links are provided to select a member view of the sender, or a club view of the sender’s current location (if known). Icons may be shown to convey member location and crush profile visibility (forward and reverse), as well as crush matching designation. Any sender request to show crush profile should also be conveyed.

3.7 Offer Center

Offers from marketers are promotional discounts on products or services. Each offer is described as follows:

Market Club or sponsor making the offer
Discount Free, 2for1, % value, $value
Item All drinks, beer/wine, well drinks, admission, food, merchandise
Start Date/Time offer starts
End Date/Time offer ends

Optional: Additional field for number of available redemptions.

An example offer is:

From Ruby Skye: 2for1 beer/wine, valid 2/11-2/19

Depending on display limitations, some reformating of the offer information may be necessary. Offers may be sorted by any of the offer fields. Clicking on a particular offer brings up the individual offer view, which may show more details and enables redemption.

BRIEF DESCRIPTION OF THE DRAWINGS

FIG. 1 is a diagrammatic view of the Hoozware system, including members, venues and a data processor.

FIG. 2A is a map view of venue search results; FIG. 2B is a text view of venue search results.

FIG. 3 is a simplified logic flow diagram for a software application accessing a user’s mobile communication device.

FIG. 4 is a simplified logic flow diagram for a software application to run on the Hoozware data processor.

FIG. 5 is a simplified logic flow diagram for a software application accessed using a promoter’s office computer.

FIG. 6 is a simplified logic flow diagram for a software application accessed using a member’s home computer.

FIG. 7 is an example plot of one demographic versus time on a particular evening at one venue, where the historical average for the selected demographic is plotted along with the actual real-time demographic.

FIG. 8 provides exemplary information requested to open a user account using a web browser on a desktop computer.
FIGS. 9-12 refer to information about a member and the opportunity to find a partner, referred to as “Crush Information.” In this example, the member fills out the information using a web browser on a desktop computer.

FIGS. 13-23 provide user Preferences and various aspects of information included in the database of the Hoozware System. In this example, the member fills out the information using a web browser on a desktop computer.

FIG. 24 shows an exemplary menu of selections displayed on the screen of a mobile communication device, such as a mobile telephone.

FIGS. 25-26 demonstrate how to search for and select a particular club using a mobile communication device; where, in this example, the selected club is referred to as “Dragon Bar.”

FIGS. 27-36 illustrate various aspects and characteristics of the club referred to as “Dragon Bar” all displayed on a mobile communication device. In particular, FIG. 30 shows three curves versus time: the total number of men at the club, the total number of women at the club and the overall total number of members at the club.

FIG. 37 shows the menu for selecting Check-in on a mobile communications device.

FIGS. 38-43 illustrate the various stages of the check-in involving selection of a club, estimation of the demographics of patrons at the club, evaluation of the club, the opportunity to play a game of chance to win a prize, redeeming the prize, and changing the evaluation of the club later.

FIGS. 44-47 illustrate the use of a mobile communication device with the Hoozware System for locating and viewing other members, including “Crush” members, employing filters for the selection.

FIGS. 48-50 illustrate the use of a mobile communication device for sending messages to other members of the Hoozware System.

FIGS. 51-53 display promotional offers from the club to the members on the screen of a mobile communication device.

FIGS. 54-63 illustrate the fields for a venue representative to login and provide their venue account and profile information.

FIGS. 64-69 illustrate the fields used for presenting the demographics of members at a venue, where FIG. 65 is an illustrative graph of the data tabulated in FIG. 64.

FIGS. 70-75 provide illustrative fields for promotional activities.

DETAILED DESCRIPTION OF THE INVENTION

A system and method is provided for a service to venues where people aggregate.

The subject invention is further described in detail hereunder referring to the embodiments provided in the drawings.

FIG. 1 is a diagrammatical view of the Hoozware system showing various entities communicating with a data processor 100. The data processor 100 comprises a processor 101, such as a central processing unit (CPU), computer memory 102 and a database 103 typically stored on a hard drive accessible by the processor 101. The data processor 100 may comprise a computer server, desktop computer, laptop computer, portable computer or any other convenient computing device or combination of distributed or networked computing and/or data communication devices. The database 103 may be a single database or may be multiple databases that may reside on a single hard drive or multiple hard drives accessible over a network, where the network may be wired or wireless. The database 103 may comprise a dating service database. Such a dating service database may exist at a remote site and be licensed from a Hoozware vendor partner.

The data processor 100 communicates, both wired and wirelessly, with various entities, including members, venues and sponsors. The data processor 100 can communicate wirelessly with a Hoozware Member 104 who is using a data communication device 105. The data communication device may be a mobile phone (a.k.a. mobile telephone, cellular telephone, cell phone) or handheld computer. By “handheld computer” is meant a relatively small wired, wireless or mobile computer, terminal or PDA (“personal digital assistant”), such as a Palm Pilot®, Pocket PC®, Blackberry®, and the like. The Member 104 may be standing on the ground 108, sitting, walking, running, etc., or be most anywhere where they can send and receive signals. A Member 106 may communicate with the Hoozware system data processor 100 from a building 109, such as their home or office, using a wired or wireless computer 107. The computer 107 may be a laptop computer, desktop computer, mobile phone, handheld computer and the like. A Member 110 may communicate with the Hoozware system data processor 100 from a vehicle 112, such as a car, bus, train, subway, people mover, aircraft, watercraft, and the like. Typically, the Member 110 communicates with the Hoozware system using a mobile phone 111; however, depending on whether the vehicle has wired communication capability, the Member 110 may use other wireless or wired communication devices, including handheld computers, wireless computers, wired computers, wired telephones, cordless telephones and the like.

The data processor 100 is also capable of communicating with venues and members and non-members at venues. The data processor 100 communicates with Venue 113 by both wired and wireless communication devices. For example, a venue manager 123 may communicate with the data processor 100 from his office using a wired desktop computer 124. The manager 123 may also communicate with the data processor 100 using a mobile phone. The data processor communicates with members 114 at Venue 113 typically by their data communication devices 122. In FIG. 1, members are shown having data communication devices that are depicted similarly to the data communication device 105. Non-members 115 at Venue 113 are not depicted in FIG. 1 to have data communication devices; however, they may have them. The non-members 115 typically have limited access to information that the data processor 100 provides to the members 114.

Typically, the data communication devices 122 comprise position-sensing devices, such as global positioning system (GPS) sensors. Any other convenient position-sensing device may be used. Assuming a member is in possession of such a data communication device, the location information provided by the GPS sensor is assumed to indicate the location information for the member. The data processor 100 typically receives location information from the data communication devices 122 of members 114. Accordingly, at Venue 113, three of the five people present are tracked and known to be at Venue 113. For the tracked members 114 the data processor also knows their traits and can calculate demographics of members 114 at Venue 113 and also estimate the demographics of the entire crowd based
on a previously estimated relationship between member demographics and entire crowd demographics.

The venue manager 123 at Venue1 113 typically can view information provided by the data processor 100 concerning the members 114 at Venue1 113, as well as, view information about the members 117 and 120 at other venues 116 and 119, respectively. A non-member 118 is at Venue1 116 and a non-member 121 is at VenueV 119. The data processor 100 typically provides such information concerning members to a Hoozware website, where the manager 123 views it using a browser or custom software application running on his office computer 124. The venue manager 123 at Venue1 113 may use such viewed information to decide to send a promotion to a desired number of members making up a demographic of interest or exhibiting a behavior of interest to the manager 123. For example, the manager 123 at Venue1 113 may decide at 10:00 p.m. that business is a little slow and so he wants to entice members to come to Venue1 113. The manager 123 can use either a browser or custom software application running on his office computer 124 to submit a request to send a promotion. In one illustrative embodiment, the manager 123 may use a series of drop-down boxes, number-entry boxes, radio buttons, and the like, to submit his request to the data processor 100. For example, the manager 123 may use drop-down boxes to select a first demographic group comprising women between the ages of 25 and 29. The manager 123 may then use a number-entry box to enter the desired number of members to which a promotion is sent. For example, the manager 123 may enter the number “25.” In the illustrative embodiment, the manager 123 then selects from a set of radio buttons which promotion is to be sent the his selected demographic. For example, the manager 123 selects his promotion to comprise an offer for “No Cover Charge.” In the illustrative embodiment, the manager 123 then selects from the drop-down boxes a second demographic group comprising men between the ages of 25 and 34; clicks a radio button that the promotion is to be sent to “All In The Selected Demographic Not At Venue1;” and selects from a set of radio buttons that the promotion comprise a “2 for 1” drink offer if redeemed within 30 minutes. The manager 123 then clicks a “Preview” button which summarizes the promotion, to whom it is to be sent, the associated cost of the promotion to be paid to Hoozware, and is then presented with “Send,” “Cancel,” and “Back” buttons. If Send is pressed, the data processor 100 follows the manager’s instructions and sends the promotion to the mobile phones (e.g., using SMS text messages) and/or email addresses of members fitting the desired demographics. The promotion may also be stored for members on the Hoozware data processor 100 in a location accessible by the members using any of a variety of wireless and wired communication devices.

In the illustrative embodiment above, selecting “All In The Selected Demographic Group Not At Venue1” means that the promotion will go to all members fitting the selected demographics, including the mobile phones of members at other venues. In fact, the Hoozware system typically allows a venue manager to specifically request that a promotion be sent to members exhibiting a particular behavior. Some example behaviors include (a) the venue you’re at now, (b) venues you frequent, (c) where you park before going to a venue, (d) where you eat before going to a venue, (e) the path you take in going to a venue, (f) how much you drink at a venue, (g) how much you spend at a venue, (h) which types of promotions you accept, (i) what types of products you buy, and the like. Accordingly, in the illustrative example above, the manager 123 at Venue1 113 might intentionally try to encourage members at other venues to come to his venue by selecting from a drop-down box that his promotion be sent to members 117 exhibiting the behavior that they are presently at Venue2 116. The manager 123 may select that the promotion sent to this selected group of members further include “No Cover Charge” since it is likely that such members already paid a cover charge at the competing Venue2 116. Venue2 116 may also send a promotion to its members in attendance to encourage them to stay. In a sense, the Hoozware system can be used like an “eBay® for people,” where venues, in effect, bid for members in real time.

Typically, various mobile phone controls are used to control the translation and zoom of the map. Mobile phone controls are also typically used to select a venue and request more information about the venue. For example to further illustrate, after selecting the map mode by toggling between “map mode” and “text mode” using the * key, the VenueA 212 is highlighted by default since it received the highest ranking score. To highlight a subsequent venue, the mobile phone “down arrow” is used; then to highlight a venue above, the mobile phone “up arrow” is used. Once a venue is highlighted for which the member desires more information, such as detailed information on the highlighted venue’s characteristics and attendee demographics, the “OK” button on the mobile phone is pressed. If the mobile phone has a touch screen, the member may simply tap the circle designating the venue to bring up detailed information on the corresponding venue.

FIG. 2B is a text display 222 that may be used in an exemplary embodiment to display venue search results on the screen of a mobile phone when in “text mode.” In this embodiment, the text display 222 lists the venues returned by a Hoozware venue search. The text display 222 lists the
venue, Venue A 224, with the highest ranking score at the top next to ranking index 1 223 and with a ranking score of 78% 225 listed next to it on the other side. In the example, the other venues are listed below Venue A 224 next to their associated ranking index and ranking score. Typically, the text display 222 has a graphical scroll bar 227 when there are too many venue results to fit on a single screen.

[0518] Continuing with this exemplary embodiment, to toggle from the map display 200 to the text display 222 the member may again use the * key. Similar to the map mode, the Venue A 212 is highlighted by default since it received the highest ranking score. To highlight a subsequent venue in the text list, the mobile phone “down arrow” is used; then to highlight a venue above, the mobile phone “up arrow” is used. Once a venue is highlighted for which the member desires more information, such as detailed information on the highlighted venue’s characteristics and attendee demographics, the “OK” button on the mobile phone is pressed. If the mobile phone has a touch screen, the member may simply tap the name of the venue to bring up detailed information on it.

[0519] FIG. 3 is a simplified logic flow diagram for a software Hoozware mobile application which may be accessed by, or run on, a member’s mobile phone. A commercial Hoozware mobile application is typically much more complex; however, FIG. 3 exemplifies some of the basic elements that typically exist in such more complex applications. Such an application is typically downloaded to the member’s mobile phone from the Hoozware website, the member’s carrier’s website, a third-party mobile phone software website or by downloading the application from a CD to the member’s computer and then transferring the application to the member’s mobile phone. The Hoozware mobile application may also run on the Hoozware system server 100 and be accessed, such as by a web browser, using a mobile phone (typically using a WAP browser), other data terminal, an office computer, communication device and the like.

[0520] In an illustrative embodiment, the Hoozware mobile application is loaded onto the member’s mobile phone and launched, i.e., started 300. Once the application is launched it runs as a background process until terminated by the member. Typically, even if the mobile phone is turned off, if the application had not been explicitly terminated by the member prior to turning off the mobile phone, the application will automatically launch when the mobile phone is turned on.

[0521] During the process of loading and launching the Hoozware mobile application, the member is asked to setup the application. During setup, the member is typically asked to configure, define or edit the following application features: (1) tracking window(s), (2) moods, (3) personal profile, including traits, nickname, personal statement, self photo, etc., (4) register with Hoozware, (5) friends and groups, etc.

[0522] The Hoozware mobile application performs a number of important functions. Such functions include: (1) checking and handling tracking, (2) processing received messages and (3) processing messages to send. Each function may be a separate process and processed in parallel or sequentially. Each process may be a separate thread. In the Hoozware mobile application embodiment of FIG. 3, the functions are processed sequentially.

[0523] While it is running, the Hoozware mobile application checks 301 whether “tracking” is enabled for the member’s mobile phone. Most mobile phones have position tracking capability, such as GPS, which can be used to determine the geographical location of the phone, and hence, the member. If tracking is enabled the mobile phone automatically transmits 302 the location information of the mobile phone to the Hoozware system server 100. Transmission of the location information may use any convenient method, including an SMS message, email, telephone call and the like. If tracking is not enabled, in the embodiment as shown, the member is prohibited from receiving promotions and viewing certain venue information.

[0524] Next, the Hoozware mobile application checks 303 whether there is a message to receive and process. If so, the application receives the message and checks 304 to see if it is a promoter (i.e., venue or sponsor) promotion. If so, the promotion is provided to, or made accessible by, the member. In the embodiment of FIG. 3, the promotion is placed 305 in a special promotion message box on the member’s mobile phone. If there are no other unread promotion in the member’s promotion message box the member is notified that there is a new promotion available. In the embodiment of FIG. 3, the member can configure how they wish to be notified of such new promotion. Typical notification methods include visual, auditory and tactile signals.

[0525] If the message is not a promotion, in the embodiment of FIG. 3 the message is assumed to be venue information which was previously requested by the member. In an embodiment not shown here, the Hoozware mobile application checks the message to confirm that the received information is venue information. The venue information is displayed 306 on the member’s mobile phone, such as provided by the examples of FIGS. 2A and 2B.

[0526] Next, the Hoozware mobile application checks 307 whether the member has requested to send a message. This check 307 is also done next if it was determined 301 that tracking was not enabled. If the member has requested to send a message a check 308 is done to see if the request is for venue information. If so, the member’s current “mood” is submitted 309 to the Hoozware system server 100 along with a request for a list of venues best matching the demographics and characteristics defined by the member’s mood. If the member was not being tracked at the time of this venue information request, tracking will be enabled 310 on their mobile phone for a period of time. A typical period of time is until the end of the predefined tracking window.

[0527] If it was determined 308 that the member’s request was not for venue information, in the embodiment of FIG. 3 the request is assumed to be to send media information, so media is sent 311. In an embodiment not shown here, the Hoozware mobile application checks the request to confirm that it is to send media information. Media information sent by the member typically includes text, audio (including audio recordings of the crowd, music/band and voice annotated member comments), images and/or video, and may be sent in any convenient format, including SMS, MMS, email, a phone call, and the like. In one embodiment, if the member enters text into their mobile phone, uses their mobile phone to record sound, take a picture or record video, the Hoozware mobile application will infer that the member wishes to post characteristic information about a venue and so the Hoozware mobile application will prompt the member to submit such media to the Hoozware system server 100.

[0528] At this point, as well as if it had been determined 307 that the member was not requesting to send a message, control is returned to the beginning where the Hoozware mobile application checks 301 whether tracking is enabled.
FIG. 4 is a simplified logic flow diagram for a software application which may run on the Hoozware system server, a.k.a. data processor 100. A commercial Hoozware system server application is typically much more complex; however, FIG. 4 exemplifies some of the basic elements that typically exist in such more complex application. The Hoozware system server application performs a number of important functions. Such functions include: (1) receiving and processing messages from members, (2) receiving and processing messages from promoters, (3) storing member traits, venue demographics and venue characteristics. Each function may be a separate process and processed in parallel or sequentially. Each process may be a separate thread. In the Hoozware system server application embodiment of FIG. 4, the functions are processed sequentially.

Once the Hoozware system server application is loaded onto the Hoozware system server and started it checks 401 whether there is a message to receive. If not, the application continues to check 401 until there is a message to receive. Once there is a message to receive, the Hoozware system server application checks 402 whether the message is from a member. If not, in the simple embodiment of FIG. 4 the Hoozware system server application assumes the message is from a promoter. In an embodiment not shown here, the Hoozware system server application checks the message to confirm that it is from a promoter.

A promoter message typically includes a promotion and instructions regarding to which members the promotion is to be sent. Such instructions typically include demographics and behaviors that members must possess to receive the promotion. Optionally, such instructions further include the maximum number of members to which the promotion is to be sent. Optionally, such instructions further include specific members, typically referred to anonymously by a member identifier, to which the promotion is to be sent. A promotion typically comprises drink specials, cover charge discounts, access to VIP lounges, transportation offers, parking specials, food specials, merchandise offers, lodging specials, music downloads, passes to other events, retail gift cards, and the like. The message is sent 403 to, or made accessible by, one or more members by the Hoozware system server 100 following the promoter's instructions. At this point, control is returned to checking 401 whether there is a message to receive.

A promotion may be redeemed by the receiving member in a variety of ways, including showing the agent the promotional material displayed the member’s mobile phone, where such promotional material typically includes an offer identifier. The promoter’s agent is anyone permitted by the promoter to provide to the redeeming member the goods and/or services promoted by the promotional material. The redeeming member may be required to show the promoter's agent the member's personal-field photo on their mobile phone, or other identification, to confirm that they are the intended member for the promotional material. The member may receive rewards points for accepting the promotional material. For more discussion on rewards, refer to the previous details of one embodiment of the subject invention in Section 3.2 covering an example Rewards Program.

If the check 402 regarding whether the message to be received is from a member is true, the message is received and queried 404 to see if it contains location information of the member’s mobile phone (a.k.a. mobile communication device). If so, in the embodiment of FIG. 4 the Hoozware system server 100 predicts 405 whether the member is at a particular venue. If so, the member’s traits are combined with the traits of other members estimated to be at the venue to provide 406 demographics for the venue. In the embodiment of FIG. 4, other members may be alerted 407 to the change in venue demographics. Typically, a member will receive such an alert 407 only if they have requested to be alerted if a demographic of interest to them has moved above or below a predefined level, or if a member of interest, such as a friend or group member, has arrived at or left the venue. At this point, control is returned to checking 401 whether there is a message to receive.

If the message that is received and queried 404 does not contain location information the message is queried 408 to see if it contains a request for venue information. If so, the message contains the sending member’s “mood” and/or associated desired demographics and venue characteristics with weighting factors. The Hoozware system server 100 processes the desired demographics and venue characteristics with weighting factors to determine the ranked list of venues that best matches the member’s desires. Typically, such a ranked list of venues includes a measure of how close each listed venue matches the member’s defined mood. The ranked list of venues and measures of match are sent typically to the member’s mobile phone and/or home computer. At this point, control is returned to checking 401 whether there is a message to receive.

If the message is queried 408 and does not contain a request for venue information, in the embodiment of FIG. 4 the message is instructed to contain media information. In an embodiment not shown here, the Hoozware system server application checks the message to confirm that it contains media information. The media information in the message is added 410 to the database 103 that the Hoozware system server 100 accesses. The media information is added 410 to the section of the database 103 for the venue the media pertains to. At this point, control is returned to checking 401 whether there is a message to receive.

FIG. 5 is a simplified logic flow diagram for a software application which may be accessed by, or run on, a promoter’s office computer. A commercial Hoozware promoter application is typically much more complex; however, FIG. 5 exemplifies some of the basic elements that typically exist in such more complex application. Such an application is typically downloaded to the promoter’s office computer (or alternately, to a mobile phone, other data terminal, etc.) from the Hoozware website or by loading the application from a CD to the promoter’s computer. The Hoozware promoter application may also run on the Hoozware system server 100 and be accessed, such as by a web browser, using an office computer, mobile phone, other data terminal, communication device and the like. The Hoozware promoter application performs a number of important functions. Such functions include: (1) receiving member demographics and behaviors, (2) receiving member demographics at venues, (3) selecting promotions and specifying instructions regarding to which member the promotions should go, and (4) sending the promotion and instructions to the Hoozware system server 100.

Each function may be a separate process and processed in parallel or sequentially. Each process may be a separate thread. In the Hoozware promoter application embodiment of FIG. 5, the functions are processed sequentially.

Once the Hoozware promoter application is loaded onto the promoter’s computer, or accessed by a web browser and started it allows the promoter to continually view 501
the demographics and behaviors of members in the HooZware system. In the embodiment of FIG. 5, the HooZware promoter application allows the promoter to also view the demographics at one or more venues.

[0538] The HooZware promoter application allows the promoter to select 502 promotional materials to send or post, and to specify instructions regarding which members to send to, or make accessible, the promotional materials. The HooZware promoter application also allows the promoter to send 503 the promotional materials and instructions to the HooZware system server 100, which then sends to, or makes accessible, the promotional materials to members according to the instructions.

[0539] FIG. 6 is a simplified logic flow diagram for a software application which may be accessed by, or run on, a member’s home computer. A commercial HooZware member’s home application is typically much more complex; however, FIG. 6 exemplifies some of the basic elements that typically exist in such more complex application. Typically, the member’s mobile application (FIG. 3) and the member’s home application (FIG. 6) are similar. In fact, typically, the member’s mobile application provides a subset of functionality of the member’s home application. The member’s home application is typically downloaded to the member’s home computer from the HooZware website or by loading the application from a CD to the member’s computer. The HooZware member’s home application may also run on the HooZware system server 100 and be accessed, such as by a web browser, using a home computer, mobile phone, other data terminal, communication device and the like. The HooZware member’s home application performs a number of important functions. Such functions include: (1) viewing venue demographics and characteristics, and determine which friends and groups are at which venues, (2) uploading media content concerning venue characteristics to the HooZware system server 100, (3) viewing, redeeming or requesting a promotion, (4) defining and editing personal traits and related information, (5) selecting a tracking window and enabling/disabling tracking, (6) defining and editing moods, (7) defining friends and groups, (8) specifying visibility to others and (9) reviewing, adding and/or redeeming rewards. Each function may be a separate process and processed in parallel or sequentially. Each process may be a separate thread. In the HooZware member’s home application embodiment of FIG. 6, the functions are processed sequentially.

[0540] Once the HooZware member’s home application is loaded onto the member’s home computer, or accessed by a web browser, and started 600 it checks 601 to see if the member has requested a venue search. If so, the member’s “mood” and/or associated desired demographics and venue characteristics with weighting factors are sent to the HooZware system server 100. The HooZware system server 100 processes the desired demographics and venue characteristics with weighting factors to determine the ranked list of venues that best matches the member’s desires. Typically, such a ranked list of venues includes a measure of how close each listed venue matches the member’s defined mood. In the embodiment of FIG. 6, the ranked list of venues and measures of match are sent to the member’s home computer for viewing 602. At this point, in the embodiment of FIG. 6, control is returned to checking 601 to see if the member has requested a venue search.

[0541] If the member has not requested a venue search, in the embodiment of FIG. 6 the HooZware member’s home application checks 603 to see if the member has requested to upload media content. If so, the member is provided with functionality to conveniently upload 604 to the HooZware system server 100 text comments, voice annotations, photos, recorded audio and video clips from a venue, and the like. The media is stored in the portion of the database 103 for the corresponding venue. At this point, in the embodiment of FIG. 6, control is returned to checking 601 to see if the member has requested a venue search.

[0542] If the member has not requested to upload media content, in the embodiment of FIG. 6 the HooZware member’s home application checks 605 to see if the member has requested to access promotions. If so, the member is provided with functionality to conveniently access promotions relevant to the member. Such promotions may be stored and accessed from the HooZware system server 100 or stored locally on the member’s home computer. The member may view promotions 606 currently relevant to the member, redeem such promotions or request that a promotion be offered to the member. At this point, in the embodiment of FIG. 6, control is returned to checking 601 to see if the member has requested a venue search.

[0543] If the member has not requested to access promotions, in the embodiment of FIG. 6 the HooZware member’s home application checks 607 to see if the member has requested to maintain their member profile. If so, the member is provided with functionality to conveniently maintain their member profile. Such member profile information is typically stored on the HooZware system server 100 or stored locally on the member’s home computer. The member may define 608, edit or view their member profile. The member profile typically includes personal traits that are combined with traits of other members to produce member demographics. Such traits typically comprise: age, sex, sexual orientation and preference, education, race, religion, smoker/non-smoker, marital status (e.g., single/married/committed/divorced), parental status, family status, occupation, home zip code, political affiliation, pictures, both direct and anonymous contact information, friend status, group status, as well as other online dating categories including physical attributes (e.g., height, weight, eye color, hair color, balding, body type, etc.), etc. At this point, in the embodiment of FIG. 6, control is returned to checking 601 to see if the member has requested a venue search.

[0544] If the member has not requested to maintain their member profile, in the embodiment of FIG. 6 the HooZware member’s home application checks 609 to see if the member has requested to set tracking parameters. If so, the member is provided with functionality to conveniently set tracking parameters 610. Such functionality typically allows the member to select a tracking window. Tracking windows are predefined periods of time in which a member’s location is automatically transmitted from their mobile phone to the HooZware system server 100. Setting tracking parameters also include the ability to enable or disable tracking, regardless of the tracking window selected. At this point, in the embodiment of FIG. 6, control is returned to checking 601 to see if the member has requested a venue search.

[0545] If the member has not requested to set tracking parameters, in the embodiment of FIG. 6 the HooZware member’s home application checks 611 to see if the member has requested to define moods. If so, the member is provided with functionality to conveniently define, edit, view and select moods 612. Mood definitions may be stored in the database
103 on the Hoozware system server 100 and/or on the member's home computer and/or the member's mobile communication device. Mood definitions include the name of the mood and the associated desired demographics and venue characteristics with weighting factors. At any time there is a default mood in effect that is used by the Hoozware system server 100 when a request is received by the member for a venue search; however, a new default mood may be selected at any time using either the Hoozware member's home application or mobile application. At this point, in the embodiment of FIG. 6, control is returned to checking 601 to see if the member has requested a venue search.

[0546] If the member has not requested to define moods, in the embodiment of FIG. 6 the Hoozware member's home application checks 613 to see if the member has requested to define friends and/or groups. If so, the member is provided with functionality to conveniently define, edit, view and select friends and groups 614. Friend and group definitions may be stored in the database 103 on the Hoozware system server 100 and/or on the member's home computer and/or the member's mobile communication device. Friend definitions include the name of the friend. Group definitions include the name of the group, the group leader and the associated group members. Friend status and group status may be included by a member as parameters of interest in a venue search request. At this point, in the embodiment of FIG. 6, control is returned to checking 601 to see if the member has requested a venue search.

[0547] If the member has not requested to define friends and/or groups, in the embodiment of FIG. 6 the Hoozware member's home application checks 615 to see if the member has requested to set their visibility to others. If so, the member is provided with functionality to conveniently define, edit, view and select visibility 616. Visibility settings may be stored in the database 103 on the Hoozware system server 100 and/or on the member's home computer and/or the member's mobile communication device. A member may allow various entities to view certain personal information. Typical entities comprise: all members, a subset of members (such as friends and/or groups), venues, and sponsors. Personal information that a member can typically restrict visibility to comprises any of their personal traits, such as: age, sex, sexual orientation and preference, education, race, religion, smoker/non-smoker, marital status (e.g., single/married/committed/divorced), parental status, financial status, occupation, home zip code, political affiliation, pictures, both direct and anonymous contact information, friend status, group status, as well as other online dating categories including physical attributes (e.g., height, weight, eye color, hair color, balding, body type, etc.). A typical visibility setting for a first member is that a second member cannot view any trait of the first member if the second member doesn't allow the first member to view the same trait of the second member. At this point, in the embodiment of FIG. 6, control is returned to checking 601 to see if the member has requested a venue search.

[0548] If the member has not requested to set their visibility to others, in the embodiment of FIG. 6 the Hoozware member's home application assumes that the member wishes to access rewards. If so, the member is provided with functionality to conveniently enter items that provide reward points 617, review the member's current number of reward points and/or redeem goods and/or services using the member's points. Reward information may be stored in the database 103 on the Hoozware system server 100 and/or on the member's home computer and/or the member's mobile communication device. For discussion on how a member may receive rewards points for accepting the promotional material, refer to the previous details of one embodiment of the subject invention in Section 3.2 covering an example Rewards Program. The member typically may use their rewards point to receive goods and/or services. Such goods and/or services typically comprise: drink specials, cover charge discounts, access to VIP lounges, transportation offers, parking specials, food specials, merchandise offers, lodging specials, music downloads, passes to other events, retail gift cards, and the like. At this point, in the embodiment of FIG. 6, control is returned to checking 601 to see if the member has requested a venue search.

[0549] FIG. 7 is a graph exemplifying how demographics information at a venue may be presented to a member, venue or sponsor, for viewing on a mobile phone, data terminal, home or office computer screen, and the like. In this example, the ordinate ("Y axis") 700 represents the demographics d at venue v, such as, the percentage of members at venue v that possess trait d. The abscissa ("X axis") 701 represents the time t. FIG. 7 shows an historical curve 702 that represents a function of previous nights where the demographic d for venue v were recorded over time. Also in FIG. 7 is a curve showing the actual 703 recorded demographics d for venue v up to the point 704 corresponding to the present time of 11:40 p.m., where the demographics d denote that 36% of the crowd possess trait d.

[0550] FIGS. 8-75 illustrate use and operation of the second embodiment of the subject system. In typical operation, the Hoozware System is a mobile phone service that informs members "Who Is Where" (i.e., Hoozware), and what's happening at venues, such as clubs (nightclubs, bars, lounges and the like). The Hoozware System brings together mobile communication device users and venues. In one commercial embodiment, the Hoozware System is free to members, and venues pay to send offers to members. In another commercial embodiment, members pay on a time and/or feature usage basis. In yet another commercial embodiment, venues pay on a time usage basis.

[0551] Using their mobile communication device, such as a mobile telephone, PDA, pocket computer, and the like, a member can:

[0552] (1) view timely club information, such as: (a) crowd demographics (size, gender mix, age, etc.); (b) peer reviews (e.g., "This place rocks!"); (c) club descriptions (e.g., no cover charge, full menu, etc.); (d) events schedules (e.g., live band tonight); (e) directions; etc.;

[0553] (2) meet up with existing friends and meet new friends; and

[0554] (3) receive valuable club coupons (e.g., free drinks, 2-for-1 drinks, free cover charge, etc.).

[0555] The Hoozware System enables venues to target offers to members of the system who like to go to venues such as theirs. A recipient member can immediately receive notification and view venue offers on their mobile communication device. A venue can send out an offer at a specific time, or send an offer having a specific time window for redemption. Venues can target a specific demographic or group of members to draw in business during specific, or "slow," times. Venues can track the demographics of members who patronize their place of business. Venues can announce "what's happening" by posting their events calendar, business description and directions.
For venues to use the Hoozware System, first they sign up. They then login via the web and update their account information, business profile and events calendar. At any time, a venue can login to their account and view the demographics of members checked-in to their venue. The venue may use the web interface to enter an offer type (e.g., 2-for-1 drink, discounted cover charge, food discount, etc.), the timing of the offer and to which members (either presently at the venue or not) the offer should be sent.

The following is an illustrative scenario: It’s Saturday evening and Rachael wants to go out... but where? She pulls out her mobile phone and clicks her web browser to connect to the Hoozware website. Her “Party Mood” is still the default so she pressses “Find Clubs”. Her phone displays “Dragon Bar” first in a list of San Francisco clubs since it has a score of 89%, the highest percentage match to her mood criteria. She checks out a short video clip of the crowd posted by another Hoozware member to the Hoozware website. Looks pretty happening. Rachael previously defined her Party Mood to include DJ Hip Hop, no cover, drink discounts, lots of friends, guys who pass her “Cool Guy” filter and a club where people currently there say it “rocks.” She goes to Dragon Bar and “Checks-In” to the club using the Hoozware System on her phone and quickly rates a few simple features of the club for other Hoozware members to see. Since she checked-in she gets to “spin” the virtual roulette wheel that the Hoozware System displays on her phone to see if she can win a prize. Tick, tick, tick, clunk. Cool! She won a free drink. She shows the prize coupon displayed on her phone to the bartender who promptly gives her the free vodka-cranberry she ordered. She’s stoked. Hmm. Now, who’s here? She uses the Hoozware System to do a quick search using her phone and sees that she has eight friends and three guys here who pass her very specific “Cool Guy” filter. Could this be the night she meets Mr. Right? Rachael does a quick review of Chris’ profile. Wow! He’s cute, and they have so much in common. He’s even from her hometown of Cleveland. They exchange anonymous text messages using the Hoozware System before deciding to meet at the bar. The rest is Hoozware history...

To use Hoozware, a user signs up over the web to become a member. Typically the member will sign up using a desktop computer or mobile communication device such as a smart mobile phone, personal digital assistant (PDA), pocket computer and the like. Typically, non-members can access limited features of the Hoozware System. To sign up, an individual completes a Member Profile, including (a) Demographic Information, (b) optional Social Information and (c) optional Crush Information. The Demographic Information is used when the Hoozware System compiles the venue crowd statistics; the Social Information is used to share a member’s interests with other members; and Crush Information is used when the member participates in the “crush matching” dating element of the Hoozware System.

During the sign-up process, an individual also provides various Preferences. A member uses their Preference settings to manage their (a) favorite venues, (b) friends list, (c) “Filters” for screening members, (d) “Moods” for ranking venues, (e) alert notifications, (f) location privacy settings, and the like.

Once signed up, members can use their mobile communication device or desktop computer to search for venues, which search may be based on desired criteria called a “Mood.” A Mood may include such criteria as (a) geographical distance away; (b) number of friends, crush matches or crowd size in attendance; (c) Reviews (including Surveys and Postings (including Overall Recommendation, Comments and Media)) submitted by members in attendance at the venue; (d) venue characteristics; (e) combinations of the above criteria as well as other criteria.

After identifying a venue, a member may inspect details about the venue, including viewing (a) current crowd demographics; (b) list of members present; (c) real-time member Surveys and Postings; (d) discount offers from the venue; (e) venue description; (f) venue events; (g) directions to the venue; and the like.

Members can also search for other members, which search may be based on desired criteria called a “Filter.” A Filter may include criteria to identify (a) Friends; (b) Crush Matches; (c) individuals based on selected Demographic Information; and the like. Once an individual identifies another member, the individual may view the Profile (e.g., background and interests) of such member, and send messages to and receive messages from the member, facilitating meeting existing and new friends at a venue.

Members can also receive, view and redeem offers sent to them by venues or other parties. Members may also receive advertisements sent to them by advertisers.

At a venue a member “Checks-In” using their mobile communication device. The Check-in procedure typically includes submitting a “Review” which typically includes a required “Survey” and an optional “Posting.” The Review typically requires answering at least one Survey question where typically the member must estimate something about the venue scene that is of interest to another member. Typically a member will be asked to estimate and answer from three to six Survey questions. The member Review may also include an optional Posting, including such elements as an Overall Recommendation, written Comments and Media (such as photos, videos and audio clips) of the venue scene. Media uploads and downloads on a mobile communication device are typically supported using MMS.

After a member Checks-in to a venue and submits the Survey, they typically get a change to receive a Prize, where typically the Hoozware System presents them with a game of chance. One exemplary game of chance is where the member gets to select one of four drink shakers presented on the member’s mobile communication device. When the member selects a shaker, the screen on their mobile communication device is refreshed where the selected shaker is replaced with either an empty or full drink glass. A full drink glass represents that the member won a drink Prize. Another illustrative game of chance is where the member gets to press a key on their mobile communication device to initiate the spinning of a roulette wheel. The wheel spins and stops at a position indicating whether the member has won a Prize or not.

In either illustrative example, if the member wins a Prize, the Prize is listed in an Offer Center with other offers they might already have received from a venue or advertiser, and the member is typically given a limited time in which to redeem the Prize. By limiting the time to typically between two and five minutes, members are not incentivized to try to fake a Check-in and submit a Survey when they’re not at the venue in order to win a Prize, since if they’re not already at the venue, they won’t have time to use the Prize they’re trying to win. Members typically are limited such that they cannot Check-in to a venue more than every 15-30 minutes. In this way, if there are multiple venues in close proximity to one
another, a member cannot quickly attempt a fake Check-in and submit a Survey at multiple venues in an attempt to see if they can win a Prize at one of the venues before deciding which venue to go into.

[0567] To incentivize members present at a venue to help update the venue scene for other members not present to view, typically after Checking-in a member can submit a new Survey every two hours and receive another opportunity to win a Prize, such as by playing a game of chance. Any member Checked-in to a venue may submit an updated Survey as often as they'd like; however, they only get a chance to win a Prize after a minimum amount of time has passed since they have taken their most recent chance to win a Prize. Typically, venues are required to cover the cost of honoring redemption of a Prize.

[0568] FIGS. 8-53 below illustrate how the Hoozoo System operates for members in a second embodiment. Various modifications may be introduced for different situations, the check-in procedure changed, the game altered, information expanded, incentives varied, and the like.

[0569] FIG. 8 provides exemplary information requested to open a member account using a web browser 800 on a desktop computer. An account may similarly be opened using a mobile communication device. This web view is entitled New Registration 801. Fields that are requested in this example include: Username 802, Password, Re-type password, Display name, First name, Last name, Email, Mobile number, Mobile carrier and Cellphone model. In this example, “winnners” 803 is entered as the username. The username is typically the name the member uses to login to their account. The Display name (in this case “winner”) is the name other members may see associated with the member’s information. Other members may also see the First name, and may do a Member Search using any of the First name, Last name and Display name.

[0570] To ensure that a computer recognizable mobile carrier is entered, a “down-arrow” 804 may be used such that when it is selected (e.g., by clicking with a computer mouse or tapping to it and pressing “OK”) a selectable list of mobile carriers is displayed. Similarly, to ensure that a computer recognizable Cellphone model is selected, a down-arrow 805 may be used, such that when it is selected a selectable list of cellphone models is displayed. When this New Registration 801 page is completed, the prospective member selects Submit 806. Alternately, if the prospective member elects not to open a member account at this time, they may select Cancel 807.

[0571] FIGS. 9-12 refer to information about a member and the opportunity to find a partner, referred to as “Crush Information.” In this example, the member fills out the information using a web browser on a desktop computer.

[0572] FIG. 9 exemplifies Demographic Information 901 a member is required to provide as part of completing their profile 900. In this example, the member completing their profile is Rachael. Required fields that must be filled out include: Gender 902, Date of birth 907 and Zipcode 910. Typically, a member’s Gender 902 is viewable by all other members; however, a member’s Date of birth 907 is not viewable directly, but a member’s age, calculated using the Date of birth 907, is viewable. Also, a member’s Zipcode 910 is not viewable by other members, but the living distance between members, as calculated using the distance between Zipcodes 910, is viewable. The slider 911 indicates that this screen may be continued.

[0573] For Gender 902, the member may select and check the box 904 next to Man 903 or the box 906 next to Woman 905 (which is check in this example). This this example, each of the month, day and year corresponding to Date of birth 907 have a down-arrow to ensure a computer-readable entry. For instance, the down-arrow 909 is used to select the year of birth 908. Typically, if the member attempts to enter information directly into one of the boxes, such as the year 908, the box will display the closes match to an acceptable entry.

[0574] FIG. 10 exemplifies Social Information 1000 that a member may optionally provide. Typically, any such Social Information 1000 that is entered is viewable by all members. In this example, the Social Information 1000 includes the ability to enter: a Statement 1001 (including a text box 1002), Media Files 1003, Residence 1004 city and state, Hometown 1005 city and state, Interests 1006 including Music 1007, Dancing, Movies and Television. The Media Files 1003 may include photo images, video clips, audio tracks, documents, Power Point presentations, other media types and the like. The list of Interest 1006 may be extensive to cover a very broad range of possibilities. The slider 1010 indicates that this screen may be continued. Other information that Social Information 1000 may include is one or more Drink Faves (shoe for “Drink Favorities”), one or more Club Faves, one or more Band/Artist Faves, one or more Book Faves, spoken Languages, Education, Occupation, Political View, and the like. In the example of FIG. 10, Music 1007 allows the member to specify whether they are interested in music by checking the Yes box 1008 or the No box. If the Yes box 1008 is checked, they may be allowed to check any of a variety of additional boxes related to Music 1007, such as Pop, Rock, Hip-hop, Jazz 1009 (which is checked), Classical, and the like. Similarly, checking Yes to Dancing may expose a list of dances to specify. Similarly, checking Yes to Movies may expose a list of movie types to specify, such as Drama, Action, Romance, Sci-fi, Comedy, and the like. Similarly, checking Yes to Television may expose a list of TV types to specify, such as Sitcom, Game, Reality, Talk, Documentary, and the like.

[0575] FIG. 11 exemplifies Crush Information 1100 that a member may optionally provide. Typically, a member entering any such Crush Information 1100 may indicate who may view it. The member may indicate if they are participating in the Crush Matching program by checking the box 1101. Participation includes various privileges. As with Social Information 1000, Crush Information may include a statement, entitled Here About me 1102, with associated text box 1103. The member may also include Media Files 1104 which may be more aimed to attract someone in a dating sense than the Media Files 1003 provided in the Social Information 1000. Other exemplary fields for the Crush Information include Status 1105, (sexual) Orientation, Body type, Height, Smoking (frequency), Drinking (frequency), Ethnicity, Religion, Income, Have children, Want children, and the like. The slider 1106 indicates that this screen may continue.

[0576] FIG. 12 represents a continuation of FIG. 11. FIG. 12 provides a statement 1200 about what a member is looking for in their “crush,” i.e., ideal date. The member is able to specify which pre-defined filter 1201 they’d like to use to help search for their crushes. The member may select who may review their Crush Information 1100, including All members 1203, All members participating in Crush Matching, Crush Matches and Other members 1204. When other members 1204 is selected, typically by checking the associated box, the member may be allowed to type into a box 1205, or select
from a list, the names (Display names, First names, Last names, etc.) of members they want to allow to see their Crush Information 1100.

[0577] FIGS. 13-23 provide user preferences and various aspects of information included in the database of the Hooware System. In this example, the member fills out the information using a web browser on a desktop computer.

[0578] FIG. 13 is one screen a member completes when filling out My Preferences 1300, where the preferences are various parameters used to control operation of the Hooware System. One such preference is My Clubs 1301. This preference is sometimes also called My Faye Clubs. My Clubs 1301 is a list of venues a member wishes to particularly keep track of. The list may be user generated and maintained. The list may be populated with some automation based on inference by the Hooware System. As shown, there are three entries in the My Clubs 1301 list, including Ruby Skye 1302, Dragon Bar and Matrix. As shown, a member may modify an entry, such as Ruby Skye 1302, by selecting Edit 1303 or Delete 1304 in the same row. Alternately, a member may click on the name of the venue or in a box next to it to modify the entry. As shown, to add a new entry, the member selects Add New 1305. When finished, the member selects Done 1306.

[0579] FIG. 14 provides another preference called My Friends 1400. My Friends 1400 is a list of members that a member wishes to particularly keep track of and provide viewing privileges to. Adding a member as a friend may require acceptance by the member being added, or adding a member as a friend may simply require a member to enter the added member’s Display name. FIG. 14 shows a list of nine friends: joeyb 1401, audefreys, buddabing, skilife, icandy, jssreekon, paligirlsnufe, beachdog and tunafilms. As shown with My Clubs 1301, there are various selections to add and modify the list, including View 1402, Delete 1403, Add New 1404 and Done 1405.

[0580] FIG. 15 provides another preference called My Filters 1500. This preference is sometimes also called My Member Filters. My Filters 1500 is a list of labeled filters (i.e., formulas) for specifying how to produce a “filtered” list of members from all members or another list of members. FIG. 15 shows a list of four filters: Same Hometown 1501, Hip-hop & Dancing, Ideal Guy and Cool Guy 1502. Filters may be member defined, as well as, initially populated with Hooware System defaults. As with My Clubs 1301, there are various selections to add and modify the list. If it is desired to modify the Cool Guy 1502 filter, Edit 1503 is selected. In another example, the same element of the list may be clicked on directly to select for editing.

[0581] FIG. 16 exemplifies the information a member may select when defining or editing a filter, e.g., when selecting Edit 1503 to edit the Cool Guy 1502, 1600 filter. Typically, a member can require as part of their filter any Demographic Information 1601, Social Information 1605 and Crush Information 1700. Regarding Demographic Information 1601, a member can typically specify their requirements for a variety of fields including Gender 1602, Age 1603 and Distance 1604. Regarding Social Information 1605, a member can typically specify their requirements for a variety of fields including Residence 1606, Hometown 1607, Interests 1608 including Music 1609, Dancing, Movies, TV, and the like. The slider 1610 indicates that this screen continues.

[0582] Regarding Crush Information 1700, a member can typically specify their requirements for a variety of fields including Status 1701, Orientation, Body type, Height, Smoking, Drinking, Ethnicity, Religion, Income, Have children, Want children, and the like. The filter can then be saved as the same name when editing by selecting Save As 1702. The filter can be saved with another filter name by selecting Save As 1703. Alternately, editing or creating the filter may be canceled by selecting Cancel 1704. The slider 1705 indicates that this screen is a continuation of another screen.

[0583] FIG. 18 provides another preference called My Moods 1800. This preference is sometimes also called My Club Moods or My Venue Moods. My Moods 1800 is a list of labeled criteria for specifying how to sort, i.e., rank, a list of venues. FIG. 18 shows a list of six moods: Rachael’s Party Mood 1801, Closest Distance, Most Members, Most Friends, Closest & Most Friends and Most Offers. Moods may be member defined, as well as, initially populated with Hooware System defaults. As with My Clubs 1301, there are various selections to add and modify the list. If it is desired to modify Rachael’s Party Mood 1801, Edit 1802 is selected. In another example, the same element of the list may be clicked on directly to select for editing.

[0584] FIG. 19 exemplifies the information a member may select when defining or editing a mood, e.g., when selecting Edit 1802 to edit Rachael’s Party Mood 1801, 1900. Typically, a member can require as part of their mood information provided by a venue, as well as, information estimated or otherwise provided by another member regarding a venue. Three exemplary categories of features a member may use to define a mood include Club Features 1901, Attendance Features 1908 and Other Features 1911. For instance, Club Features 1901 are provided by a venue when they sign up to participate in the Hooware System. Club Features 1901 may include such features as Atmosphere 1902, Entertainment 1904, Food 1905, Services 1906, Events 1907, and the like. Atmosphere 1902 may include such fields as Dress code 1903, Lighting, Romantic, Good for kids, and the like. Entertainment 1904 may include such fields as TV, Pool, Darts, Video games, Juke box, and the like. Food 1905 may include different kinds of food offerings, such as Full menu, Bar food, and the like. Services 1906 may include fields such as Coat check, Valet, and the like. Events 1907 typically lists the types of events the venue has on tap, such as Live music, Comedy, DJ music, Happy Hour, and the like.

[0585] Attendance Features 1908 are features based on the members in attendance. The Attendance Features 1908 may include Demographic Information, Social Information and Crush Information on members who are checked-in or otherwise known to be at a venue. A member can use a mood definition to rank venues based on their member filters, including filters for their Crush Matches. In FIG. 19, if a member selects (typically by clicking on it with a computer mouse) one of the underlined fields that end with an ellipsis, that opens up a “browse” window where the member may search for and select desired entries from a list of possible entries. Alternately, the member may type in the desired entry name in the box, such as the box 1910, separating each entry with a delimiter such as a comma or semicolon.

[0586] Other Features 1911 typically include Offers, such as drink, food and cover-charge discounts. Other Features 1911 may also allow a member to rank venues based on their proximity, i.e., Club distance. The slider 1912 indicates this screen is continued.

[0587] FIG. 20 provides Review Features 2000 as another exemplary category of feature a member may use to define a mood. The Review Features 2000 may include estimates pro-
vided by members regarding the venue “scene,” e.g., estimates of the crowd size, typical attendee age, gender mix, music, whether people are dancing, quality of the drinks, bar service, cover charge and the like. (How these estimates are entered will be discussed with subsequent figures.) Crowded 2001 designates the estimate for the crowd size. To require this review feature in a mood, a member selects the box 2002. In one embodiment of the invention, the member may also set the target crowd size they are desiring. For example, if the member desires a “packed” crowd, the use the down-arrow 2003 to select the value “3” 2004. Alternatively, the member could also type a “3” directly into the associated box. The legend showing selections and their meanings is provided to the right 2005. The slider 2006 indicates this page is continued from a previous page.

[0589] FIG. 21 provides another preference called My Alerts 2100. My Alerts 2100 is a list of labeled criteria for specifying when, and optionally how, to notify a member of the occurrence of an event of their interest. FIG. 21 shows a list of 4 alerts: Offer at any club 2102, Offer at current club, Check-in by a friend 2103. Messages can be sent to a match. Alerts may be member defined, as well as, initially populated with Hoozware System defaults. As with My Clubs 1301, there are various selection to add and modify the list. If it is desired to modify the Check-in by a friend 2103 alert, Edit 2104 is selected. In another example, the each element of the list may be clicked on directly to select for editing.

[0589] FIG. 22 exemplifies the information a member may select when defining or editing an alert, e.g., when selecting Edit 2104 to edit Check-in by a friend 2102, 2103. Typically, an alert allows the member to select a Trigger Event 2201. In this example, selecting the down-arrow 2202 causes the selectable trigger events to be listed in the box 2202. Such selectable trigger events typically include Check-in, Offer, Message, and the like. If Check-in or Offer is selected as the trigger event, the member typically must also specify a time to Consider 2205. If Check-in or Message is selected as the trigger event, the member typically must also specify the date to Consider 2204.

[0590] FIG. 23 provides another preference called My Location 2300. My Location 2300 is a list of criteria for specifying which to members the Hoozware System can provide your check-in status and location. In addition to a Master Switch 2301, FIG. 23 shows a list of five examples of groups of members that can know your location: All members 2302, Friends, Crush Matches, Current Club Crow and Other members 2303. Typically, to select one of these, a member selects the associated check box. If “Other members” 2303 is selected, the defining member enters one or more members into the box 2304 (separating each member by a delimiter) who should be given permission to know their check-in status and location. Alternately, by clicking on “Other members” 2303, a “browse” window will open and provide a list of members to choose from.

[0591] FIG. 24 shows an exemplary menu of selections displayed on the screen 2401 of a mobile communication device 2400, such as a mobile telephone. Typical elements on the screen include a communication signal indicator 2402 and a battery level indicator 2403. Also in this example is a Hoozware logo 2404, as well as, indicators for master enables for alerts 2405, location 2406 and crush matching 2407, and indication 2408 that the screen 2401 is displaying the Main menu.

[0592] On the Main menu 2408 of FIG. 24 are selections for Check-in 2409, (submit or view a) Review 2410, Check-out 2411, (find) Clubs 2412, (view) Offers 2413, (find) Members 2414, (send or read) Messages 2415, (set or view) My Preferences 2416, as well as set the master switches for Alerts 2417, Location 2418 and Crush (matching) 2419. To perform a club search, Clubs 2412 is selected. In general, to select an option, if the screen 2401 of the mobile communication device 2400 is a touch-sensitive screen, the desired option is typically tapped with a stylus. If the screen 2401 is not touch sensitive, then typically a button on the mobile communication device 2400 is used to navigate between options, and another button, typically labeled “OK”, is used to select the desired option after navigating to it and highlighting it. If Clubs 2412 is selected, program control is passed to the Clubs menu.

[0593] In general, throughout much of the following figures, the word “club” is used; although, it may represent the more general category of venue.

[0594] FIGS. 25-26 demonstrate how to search for and select a particular club using a mobile communication device; where, in this example, the selected club is referred to as “Dragon Bar.”

[0595] FIG. 25 is the Clubs 2500 menu. An exemplary label for the screen is Club Finder 2501. To do a search the member must select the desired field under Consider only 2502. Typically, Consider only 2502 refers to geographical regions used to narrow the search space. In the example of FIG. 25, box 2504 is a drop-down box of choices. To drop down the box 2502, typically a down-arrow 2503, or equivalent icon, is used. Typically when the box 2504 is dropped down, a button on the mobile communication device 2400 is used to navigate between the selections, and the “OK” button is used again to select the desired option after navigating to it and highlighting it. Alternately, if the list of selections is short, a separate check-box can be displayed for each selection. Typical choices for the box 2504 include neighborhoods, cities and other geographically identifiable regions. Although not shown in this example, there can be a “state” box or other box to first narrow down the geographical region to a more manageable area. In this example, the neighborhood called SF-Mission is selected. Other example options include All Clubs, My Face Clubs, etc.

[0596] Next, the box 2507 corresponding to Ranking Mood 2505 is selected, typically using the down-arrow 2506. In this example, Rachael’s Party Mood is selected, although, any previously defined mood from My Moods may be selected, such as Closest Distance, Most Members, Most Friends, etc. The box 2507 may also include a selection called “Define/edit mood,” or equivalent, which allows the member to define a new mood or edit an existing mood. Once the geographical region and mood are selected, the member selects Search 2508. Alternately, if the name of the desired club is known, it may be entered in the box 2510 under the Name or street 2509 title, and then selecting Lookup 2511. Alternately, if the name of the desired street one or more clubs are on is known, the street name (optionally with the street number) may be entered in the box 2510 followed by selecting Lookup 2511. If just a street name is entered, typically a list of all clubs located on that street will be displayed.

[0597] Back 2512 may be used to go back to the previous screen. If the screen is being displayed in a web browser, the
browser typically will have such a “back” capability built in. Select 2513 may be used to select a highlighted element of the interface.

*0598* FIG. 26A is a repeat of FIG. 25 with Search 2600, 2508 highlighted. When selected, the Club Search 2601 menu of FIG. 261 is displayed. In this example, as indicated by the heading 2602, there are 192 clubs that are sorted, where only the first five are displayed (e.g., due to screen space constraints). The club with the highest rank in this example is Dragon Bar 2603, with a ranking (i.e., “closeness match) score of 89% 2604. In this example, to display the next five lower ranked clubs Next 2605 is selected. To display a map showing the geographical location of a club, and optionally other information of interest about the club, a club is highlighted (as Dragon Bar 2603 is highlighted) and Map 2606 is selected.

*0599* FIGS. 27-36 illustrate various aspects and characteristics of the club referred to as “Dragon Bar” all displayed on a mobile communication device. In particular, FIG. 30 shows three curves versus time: the total number of men at the club, the total number of women at the club and the overall total number of members at the club.

*0600* If the highlighted club Dragon Bar 2603 in FIG. 261 is selected, the menu for Dragon Bar 2700 is displayed. At the bottom, the Search Score 2712 value of 89% is displayed. At a club menu such as this menu for Dragon Bar 2700, there are four selections to choose from: Crowd 2701, Reviews 2703, Offers 2703 and Description 2704. Next to Crowd 2701 is a brief summary of demographics and related crowd information for members who are checked-in at the club. This example: 2701 includes 14 men, 17W 2706 indicates that the crowd includes 17 women; 26ys 2707 indicates that the typical age of the crowd is 26 year old; and the number 6 followed by the heart icon indicates that the member has six people in the crowd who match their currently designated filter for crush matching. Note that the general term “typical age” is used, and the algorithm for determining it is not specified. Typical age may be determined using the average, median or some other determination, including where a portion of the higher and/or lower ages may be thrown out to avoid skewing of the number.

*0601* Next to Reviews 2702 is a brief summary of related review information, some of which is provided in real time at the club. For instance, the two solid stars and one hollow star followed by a parenthetical number 5 and the time of 10:22 P indicate that based on 5 reviews over some designated time period (e.g., the past 30-60 minutes), with the most recent review coming at 10:22 p.m. on the current day, that the average Overall Recommendation for the club is two out of a possible three stars.

*0602* Next to Offers 2703 is a number 3, indicating that the member has three offers pending for use at Dragon Bar.

*0603* If Description 2704 is selected, more general information as provided by club (e.g., Dragon Bar) is presented.

*0604* If Crowd 2701 is selected as shown in FIG. 27, the Crowd 2800 menu is shown as exemplified in FIG. 28. The top summary heading 2801 indicates that there are currently 31 members checked-in at Dragon Bar, and 23 of the members have information that is viewable to the member using the phone. To sort the viewable members, the viewing member fills in the Show 2802 box 2004 using the drop-down arrow 2803 to select Crush Matches. The resulting members may be further limited by selecting the box 2805 to show Only members with Photos.

*0605* Based on these elections in this example, summary information for all four resulting members is displayed. The first entry 2806 in the list for robinhood has a number of identifying icons displayed. The camera icon 2807 indicates that this member has at least one photograph. Alternately, depending on data and screen refresh rates, a thumbnail of the photo may be displayed.

*0606* The check-mark icon 2808 indicates that the member is checked-in (which is actually redundant information here, since this list is already known to be a list of members checked-in at Dragon Bar).

*0607* The circle 2809 with the cross in it indicates check-in Location visibility: shaded means check-in Location is visible, where if the left side is shaded it means the other member’s check-in Location is visible to you, and where if the right side is shaded, it means your check-in Location is visible to them. In a simpler embodiment, a fully shaded circle 2809 means your check-in Location is visible to the indicated member.

*0608* The heart symbol 2810 indicates Crush Information visibility and Crush Matches: shaded means Crush Information is visible, and blinking means “is a Crush Match.” If the left side of the heart is visible/blinking it means the other member’s Crush Information is visible to you (you are one of their Crush Matches) if the right side of the heart is visible/blinking it means your Crush Information is visible to them (they are one of your Crush Matches). In a simpler embodiment, a fully shaded heart 2810 means the indicated member passes your selected Crush Match filter.

*0609* The M,29 indicates that robinhood is a 29-year-old male.

*0610* Besides Crush Matches, examples of other selectable options for box 2804 include: All Viewable, Friends, Same Hometown, Cool Guys, Women, Demographics or any other defined filter or system keyword, etc.

*0611* FIG. 29 is the Crowd menu similar to FIG. 28 but where next to Show 2900 the option Demographics 2902 is selected using the drop-down arrow 2901. Gender 2903, Age 2904 and Distance 2905 information are then summarized, with the option to graph the information. Distance 2905 indicates how far the crowd individuals who are checked-in live from you as calculated using Zipcodes. Associated with Gender 2903 is the graph 2906 selection.

*0612* FIG. 30 exemplifies the Gender vs. Time 3001 plot that is displayed in a Graph 3000 screen when Graph 2906 of FIG. 29 is selected. The solid curves to the left of the “Now” 3009 vertical line are actual data for the current evening; the dotted curves to the right of the “Now” 3009 vertical line show historic data for the same night of the week. The abscissa 3003 is a time axis and the ordinate 3002 is the # People axis. The legend for the three curves is provided by the box 3004. The curve 3005 designated by X represents Women; the curve 3006 designated by + represents Men; and the curve 3007 designated by O represents the total of Men and Women. This plot shows that at approximately 10:00 p.m. the number of men begins to exceed the number of women present. This plot also shows that historically, between 11:30 p.m. and midnight that the number of women stops increasing and starts to decrease. Attendees may find this information useful in helping to determine when they want to arrive or leave, and club managers may use such information to deter-
mine when they want to send out offers to men an to women to achieve more desirable curves.

[0613] FIG. 31 is similar to FIG. 27, except that now Reviews 3100 is selected which brings up the Reviews menu 3200 of FIG. 32. In FIG. 32, the heading 3201 indicates that there are 42 reviews. Reviews include real-time, member-submitted Surveys, which are estimates of the club scene. Reviews also include Postings, which include (overall) Recommendations, Comments, Media, and the like. Using drop-down arrow 3202 Recommendations is selected in the box 3203 in the Show heading 3204. The (overall) Recommendation Average heading 3205 indicates that the recommendation average for the club (i.e., Dragon Bar) is two out of a possible three stars based on five reviews going back in time (e.g., 30-60 minutes) from 10:22 p.m. There are 18 recommendations where the first 10 are displayed. The slider 3209 indicates that if you scroll the screen down you will see the remainder of the first 10 recommendations.

[0614] Each individual review may be summarized with the Display name of the submitting member, a submission timestamp and how many reviews the member has submitted. A particular review may be selected to see its details. As shown previously in FIG. 28, icons indicate the existence of certain components or items of interest. In this case, the camera icon 3207 indicates that there is at least one photo associated with the first recommendation 3206 submitted at 10:22 p.m. by neotrax. Neotrax gives a one of three stars overall recommendation for the club (i.e., Dragon Bar), and she has submitted a total of 58 recommendations regarding various clubs so far. The text icon 3208 indicates that there is a free-form Comment associated with the third recommendation submitted at 9:53 p.m. by paintboysie. Paintboysie gives the club a two of three stars overall recommendation, and he has submitted 16 recommendations regarding various clubs so far.

[0615] Besides Recommendations, other Show 3294 options include: All Reviews, Crowded, Music, Dancing, Gender Mix, Age, Comments, Photos, Video Clips, Audio Clips, and the like.

[0616] FIG. 33 is similar to FIG. 27, except that now Offers 3300 is selected which brings up the Offers menu 3400 of FIG. 34. In FIG. 34, the heading 3401 indicates that the member has 3 offers at Dragon Bar. Using drop-down arrow 3403 “Earliest expiration” is selected in the box 3404 in the “Sort by” heading 3202. The first offer 3405 indicates that the member has an offer that expires at closing time the current evening for a 2-for-1 drink. As sorted, this is the offer that expires the soonest of all offers at the club. Other “Sort by” options include: Discount level, Item type, and the like. An offer can be selected to view or redeem.

[0617] FIG. 35 is similar to FIG. 27, except that now Description 3500 is selected which brings up the Description menu 3600 of FIGS. 36A and 36B. In FIG. 36A, a text description 3601 of the club is provided. The slider 3602 indicates that the screen is continued. The screen of FIG. 36A continues in FIG. 36B and provides options to view the following about the club (i.e., Dragon Bar): Features 3604, Events 3605, Media 3606, Map 3607, Directions 3608, and the like. The slider 3603 indicates that the screen is a continuation of another screen.

[0618] FIGS. 38-43 illustrate the various stages of the check-in involving selection of a club, estimation of the demographics of patrons at the club, evaluation of the club, the opportunity to play a game of chance to win a prize, redeeming the prize, and changing the evaluation of the club later.

[0619] Similar to FIG. 24, FIG. 37 shows the Main menu 3700 on a mobile communications device except that now Check-in 3701 is selected which brings up the Check-in menu 3800 of FIG. 38. In FIG. 38, the drop-down arrow 3802 is used to select a club entry in the box 3803 under the heading for Clubs 3801. Once a club is designated, Map 3805 may be selected to see a geographical map and optionally other information, including directions, about the designated club. Also, once inside a club and after a club is designated, Check-in 3804 may be selected to check-in to the club. Checking-in to a club is typically required to redeem offers, get a chance to "play" for a door prize, inform others where you are, and the like.

[0620] FIG. 39 is the Review menu 3900, which is part of the standard check-in procedure. A Review typically includes: (a) a mandatory real-time Survey 3901 and (b) an optional Posting 3905. The Survey is a set of questions the member checking-in is required to estimate. The Posting typically includes: (a) an Overall Recommendation, (b) free-form text Comments, and (c) Media. Media typically includes: (a) Photos, (b) Video Clips, (c) Audio Clips and (d) other documents.

[0621] The heading 3901 asks the member checking-in to submit a Survey of the club (i.e., the Dragon Bar). The Survey provides a number of questions to estimate, typically between one and six, but typically the number of questions is five. In this embodiment, the survey questions asked pertain to: Crowded 3902 (with example answers 3903 being: empty, so-so, packed, and the like), Music (with example answers being: none, recorded, DJ, live, and the like), Dancing (with example answers being: nobody, some, everyone, and the like), Gender Mix (with example answers being: mostly men (dudes), even, mostly women (chicks), and the like) and Typical Age (with example answers being: 20’s, 30’s, 40’s & up, and the like). In this example, if the estimate of Crowded 3902 is “packed,” the member would select “3” 3904 on their mobile communication device. Other survey questions may include: drink quality, drink price, cover charge, ethnic mixture, efficiency of bar service, wait to get in, and the like.

[0622] In FIG. 39, to answer a question the member presses the corresponding number on their phone. In general, there could be more or fewer questions, different members might be asked different questions and the member may respond using any convenient method or technology. In other words, in order to provide more complete demographics of all patrons at the club for others to search on, rather than relying on automatic tracking of only members (using tracking technologies such as GPS, WiFi, Bluetooth, etc.) to compile only the demographics of members checked into a club, members present at the club provide the Hoozeware System with real-time estimates of various demographics categories for all patrons at the club.

[0623] Members can also provide real-time Postings of the atmosphere and other club characteristics. For instance, if there were just one member at a club with 100 patrons in attendance, when the member checked in they might provide a Survey estimating that the club was crowded; there was a rocking DJ that packed the dance floor; the club had an even mix of men and women; and the typical patron age was 20-something. Thus, a different member doing a club search would be able to assess the fact that the club atmosphere was
exactly what they were looking for, even though there was only one member checked in. Of course, in the future, when most club patrons use the HooZware System, and when GPS, WiFi, Bluetooth or any other applicable tracking technology is widely supported, the demographics that the HooZware System associates with the club will be more accurate since such demographics will be based on a larger amount of actual member location data than mere estimation.

[0624] As a reward to the member for providing the Survey they typically get a chance to win a door prize, such as a discounted drink. After checking-in, the member must typically reconfirm their check-in periodically, e.g., every two hours, or they will be automatically checked-out. After reconfirming their check-in, they are typically granted another opportunity to win a door prize by submitting another Survey. A checked-in member may submit a Survey as often as they like, but the member’s most recent Survey (or, in general, their Review) places the previous one for any compiled club averages, and the member doesn’t get a chance to win a door prize more often than at a maximum frequency, which is typically every two hours.

[0625] Surveys must be submitted while at the club and using the member’s mobile communication device. The optional Postings may be submitted while at the club or anytime after leaving, and may be submitted by the member’s mobile communication device or from the member’s account using a desktop computer.

[0626] When Posting 3905 is selected in FIG. 39, the Posting menu 4000 of FIG. 40 is brought up. The heading 4001 indicates that the following information is the Posting for Dragon Bar. Postings are optional and are attributed to the posting member. The first element of the posting is (overall) Recommendation 4002. The heading 4003 is a list of exemplary possible responses, including: lame, so-so and rocks. Of course, there can be other responses. In this example, “rocks” corresponds to entering the number “3” 4004. Free-form personalized Comments 4005 may be entered in the corresponding text box. Media 4006 may be attached, where media includes any of a variety of elements, including but not limited to still images, moving images, sound images, presentations, combinations of the preceding, and the like.

[0627] FIG. 41 shows a game of chance given to a member after checking-in and successfully completing a Survey as part of a Review. This particular game includes a roulette wheel 4101. Typically the member will press a key on their mobile communication device to initiate spinning of the wheel roulette 4101. This embodiment, the member has a 1-in-4 (i.e., 25%) chance of winning a 2:1 (i.e., 2-for-1) drink. If a winning sector 4102 of the roulette wheel 4101 stops at the indicator 4103, the member is informed 4104 that they have won a prize. If a member wins a prize, they receive a Prize Offer to that effect in their Offer Center that they may redeem. Typically, the member has a short limited time in which to redeem such Prize Offer in order to ensure that a member inappropriately checking-in while not at the club cannot redeem such Prize Offer before it expires.

[0628] Other games include a modified “shell game,” where the member selects one of a group of items. For instance, there may be four drink shakers presented, and the member has a one-in-four (25%) chance of picking the drink shaker hiding a full drink. Typically, a club participating in the HooZware System will cover the cost of redeeming the Prize Offer.

[0629] In more general terms, after checking-in and successfully submitting a Survey, a member present at a venue uses their mobile communication device to communicate with a computer server, where a result of the communication is associated with the member. The members’ mobile communication device transmits a first signal concerning the venue to the computer server when the member is present at the venue with their mobile communication device. In response to the first signal, a second signal is transmitted from the computer server to the mobile communication device, wherein the second signal solicits an action from the member. The member then performs the action, and their mobile communication device transmits a third signal to the computer server indicating their action. Then, a fourth signal is transmitted from the computer server to the member’s mobile communication device indicating the result of the member’s action.

[0630] FIG. 42 shows how to redeem a Prize Offer. Using their mobile communication device, the winning member selects the Prize Offer in their Offer Center if it is not already being displayed. The Prize heading 4200 indicates the contents being displayed are a Prize Offer. Typically the club’s logo 4201 is displayed. The type of prize won 4202 is also displayed. The heading 4203 indicates that the Prize Offer was won at 11:45 p.m. that evening at Dragon Bar. The heading 4204 indicates the details of the Prize Offer as being “Buy 1 drink, get 1 drink free.” Each offer is typically tagged with a code, such as the code 4205. Prize Offers typically have a limited time by which they must be used. Here the remaining time to redeem the Prize Offer is 4:56 minutes 4206. Typical times range from one to 10 minutes, with the typical time being five minutes. The message 4207 indicates that the Coupon is deleted after usage! The Prize Offer is valid until the timer counts down to zero. During the time the Prize Offer is valid, the coupon displayed on the member’s mobile communication device must be shown to a member of the club’s wait staff. The wait staff should verify that the counter is not yet zero. After viewing the coupon, the member or wait staff should press the button corresponding to Done 4208 to designate the coupon as having been “used.” Typically, the winning member can request a physical coupon from the wait staff if they wish to redeem their Prize Offer at a later time.

[0631] Note that to prevent an unauthorized user from using someone else’s offers, a member’s Offer Center typically can only be accessed by the mobile communication device of the member associated with the offers. Further toward this goal of authenticating the redeemer of an offer, when redeeming an offer, the photo of the member associated with the offer may be displayed on the coupon.

[0632] Similar to FIG. 37, FIG. 43 shows the Main menu on a mobile communications device, except that now Review 4300 is selected which brings up the Review menu 3900 of FIG. 39, which has already been discussed in detail. Another difference in the Main menu display of FIG. 43 compared to the Main menu display of FIG. 37 is that since the member is checked-in, the heading 4301 designates that the member is Checked-in at Dragon Bar. The Main menu display of FIG. 43 also has a heading 4302 that designates that the member will be automatically checked-out in 45 minutes.

[0633] FIGS. 44-47 illustrate the use of a mobile communication device with the HooZware System for locating and viewing other members, including “Crush” members, employing filters for the selection.
FIGS. 48-50 illustrate the use of a mobile communication device for sending messages to other members of the Hoozware System.

Similar to FIG. 44, FIG. 48 shows the Main menu on a mobile communications device, except that now Messages 4800 is selected which brings up the Messages menu 4900 of FIG. 49. In FIG. 49, the heading 4901 indicates that the member has 4 messages. Using drop-down arrow 4902 “Earliest date” is selected in the box 4903 in the “Sort by” heading 4901. The first message 4904 indicates that the member has received a message from baddabing on Mar. 13, 2006. The message subject was to the effect that the Matrix was rocking. As sorted, this message at the top is the oldest, i.e., received the earliest. Other “Sort by” options include: Oldest date, subject, alphabetical, and the like. To choose a message to view or respond to, navigation keys on the member's mobile communications device are used to highlight and select a desired message, such as the message from midwestor 4905. Alternately, to compose a new message, Compose 4906 is selected.

If the message from midwestor 4905 is selected, it brings up a screen exemplified by FIG. 49B. This screen indicates that it is Message 3 4907 and contains some summary information and icons pertaining to midwestor. To view midwestor, Member View 4908 is selected. To view information on the club midwestor is at, Club View 4909 is selected. The message 4910, including message subject, salutation, body, and signature are displayed. The following options pertain to the currently selected message: Delete 4911 deletes the message; Previous 4912 displays the previous message in the list in FIG. 49A; Reply 4913 opens a reply message to midwestor; Next 4914 displays the next message in the list in FIG. 49A; and Compose 4915 opens a new message.

In FIG. 49B, Reply 4913 is highlighted. If selected, a reply message is opened as shown in FIG. 50. Messages 5000 is the menu label. In the reply message, the recipient midwestor 5002 is automatically filled in, as is the subject 5004, salutation 5006 and signature 5010. To choose from a variety of prompted member recipients, the To: box 5001 is selected; to choose from a variety of prompted subjects, the Subject: box 5003 is selected; choose from a variety of prompted salutations, the Salutation: box 5005 is selected; choose from a variety of prompted bodies, the Body: box 5007 is selected; choose from a variety of prompted signatures, the Signature: box 5009 is selected; and to browse for attachments, the Attach: 5011 box is selected. Alternately, any of the corresponding boxes 5002, 5004, 5006, 5008, 5010 may be filled manually by typing. To cancel the message Cancel 5013 is selected, and to send the message to the intended recipient Send 5014 is selected.

Example prompted recipients include defined groups (e.g., Friends) and other members. Example prompted subjects include: Call Me!; Check It Out!; Good Tunes!; I’m Here!; I’m Outta Here!; It’s Rockin’!; Let Me Buy You A Drink!; Let’s Chat!; Let’s Meet!; Meet @ the Bar in 5 mins!; Nice Pics!; Nice Profile!; We Match!; Where Are You; Wink!; You’re Cute!; You’re Hot!; and the like. Example
prompted salutations include: Hello.; Hey.; Hi.; Hiya.; and the like. Example prompted bodies include: Cool.; I’ll be there.; Maybe later.; No thanks.; Thanks.; Yes.; and the like. Example prompted signatures include the sending member’s Display name, their first name, their last name, and the like. [0643] An alternate embodiment for a message is where for each heading (To, Subject, Salutation, Body and Signature) there is (a) a drop-down box listing each of the prompted responses along with an entry that says, “Use Custom Box,” and (b) a box where custom text can be entered. Typically associated with the Subject heading is a drop-down box with the list of clubs. When used, the Subject is augmented with the selected club name. Typically associated with the Signature is a box to select “Include my mobile number.” Thus, the member can easily inform the recipient of their mobile number, which otherwise is not provided to the recipient.

[0644] FIGS. 51-53 display promotional offers from the club to the members on the screen of a mobile communication device.

[0645] Similar to FIG. 48, FIG. 51 shows the Main menu on a mobile communications device, except that now Offers 5100 is selected which brings up the Offers menu 5200 of FIG. 52A. FIG. 52A displays four clubs with offers awaiting the member: Adaptive Path has one offer; Dragon Bar 5201 has three offers; Hemlock Tavern has one offer and Ruby Sky has one offer.

[0646] Similar to FIG. 34, in FIG. 52B, the heading 5202 indicates that the member has 3 offers at Dragon Bar. Using drop-down arrow 5204 “Earliest expiration” is selected in the box 5205 in the “Sort by” heading 5203. The first offer 5206 indicates that the member has an offer that expires at closing time the current evening for a 2-for-1 drink. As sorted, this is the offer that expires the soonest of all offers at the club. Other “Sort by” options include: Discount level, Item type, and the like. An offer can be selected to view or redeem.

[0647] When an offer in FIG. 52 is highlighted and selected, as is the first offer 5206, the offer is displayed as exemplified in FIGS. 53A and 53B. FIGS. 53A and 53B exemplify how to redeem an offer. Using their mobile communication device, a member selects the desired offer in their Offer Center (e.g., one of the offers listed in FIGS. 52A and 52B) if it is not already being displayed. The label of the screen in FIG. 53A is Offers 5300. Typically the club’s logo 5301 is displayed. The type of offer 5302 is also displayed. The heading 5303 indicates that the offer is “Offer 1” at Dragon Bar. The heading 5304 indicates the details of the offer as being “Buy 1 drink, get 1 drink free.” The heading 5305 indicates that the offer expires at closing on the evening of Mar. 14, 2006. To use the offer, the member selects “Use Now” 5306.

[0648] When “Use Now” 5306 is selected, the offer heading 5303 typically changes to say the time that the offer was used 5307, e.g., at 11:03 p.m. Each offer is typically tagged with a code, such as the code 5308. Offers typically have a limited time by which they must be used, to prevent the member from going to multiple wait staff attempting to use the same coupon multiple times. Here the remaining time to redeem the offer is 1:56 minutes 5309. Typical times range from one, to 10 minutes, with the typical time being two minutes. The offer is valid until the timer counts down to zero. During the time the offer is valid, the coupon displayed on the member’s mobile communication device must be shown to a member of the club’s wait staff. The wait staff should verify that the counter is not yet zero. After viewing the coupon, the member or wait staff should press the button corresponding to Done 5310 to designate the coupon as having been “used.”

[0649] FIGS. 54-75 below illustrate a how the Hoozware System operates for the venues in the second embodiment. Various modifications may be introduced for different situations, information expanded, incentives varied, and the like.

[0650] FIGS. 54-63 illustrate the fields for a venue representative to login and provide their venue account and profile information.

[0651] FIG. 54 is the login screen to access the Hoozware System. The Hoozware System in this embodiment is accessed via a web browser 5400 at the URL 5401. Instead of the H? logo in previous figures, FIG. 54 displays a person near a magnifying glass 5402. As is customary for login screens, the member is prompted to enter their username in the box 5403 and their password in the box 5404. The remainder of the screen may be used for general information, advertisements, video promotions, details about the Hoozware System, and the like.

[0652] FIG. 55 is a screen labeled “Venue Console for My Venue” 5500. Using this console, various groups of venue information may be accessed, including View information 5503, Promotions information 5404, My Venue Profile information 5405, My Venue Account information 5406, the ability to Logout 5507, and Help 5508. “My Venue Account” information 5406 presents a screen of information the venue (e.g., club, bar, lounge, etc.) completes. The Administrator Primary Contact information 5501 is entered in the boxes. Such contact information typically includes a name, office telephone number, mobile number, fax number and email address. Although not shown, there may be additional fields 5502 for an Administrator Secondary Contact; Marketing Primary Contact; Marketing Secondary Contact, and the like.

[0653] FIG. 56 presents “My Venue Profile” information. Such information typically includes a box 5600 to enter the venue name, as well as address, phone, fax, website and directions box 5601. The directions box 5601 have an associated slider bar 5602 with up/down arrows for causing the text in the directions box 5601 to scroll so the amount of text in the directions box 5601 is not limited to the box dimensions. The slider 5603 indicates that the information on this screen is to be continued.

[0654] FIG. 57 is a continuation of FIG. 56. In FIG. 57 the venue may enter a Short Summary 5700 and a Long Summary 5701 about themselves. Typically, the Short Summary 5700 is used when displaying on small screens, such as screens of a mobile communication device; typically the Long Summary 5701 is used when displaying on large screens, such as desktop computer monitors.

[0655] FIG. 57 also allows a venue to provide media for the Hoozware System to direct to users when they request more information about a club they're considering. As shown in this embodiment, there are spots for three different media entries; however, by selecting New 5709, new media entries may be added. In this example, the first media entry is a picture named photo1.jpg 5703. The name of the file may be typed into the associated box. Alternately, by selecting Media 1 . . . 5702 a browse window is typically opened to help locate the desired file. In this example, to delete an entire media entry the associated box 5705 is checked and then Delete 5708 is selected. The second media file in this exemplary embodiment is a sound file named sound1.wav 5706, and the third media file in this example is a movie file named video1.wmv 5707. Typically associated (e.g., next to the
media file is a caption. In the example of FIG. 57 the caption entered for photo1.jpg is “Our dance floor” 5704.

[0656] Other elements typically part of the “My Venue Profile” information include an events calendar. Typically, to view or edit venue event, the venue representative select the calendar icon 5711 or the descriptive words “Events Calendar . . .” 5710. As before, the slider 5712 indicates this screen is continued on another.

[0657] FIG. 58 provides still more information a venue can complete for the Hoosier System to make available to users, i.e., members, and optionally to guests, of the system. Such information includes the availability and type of Food 5800; the Atmosphere 5805; the Dress Code 5806; available Entertainment 5807; the existence of a Coat Check 5808; whether the venue is “Good for Kids” 5809; and the like. FIG. 58 provides various example elections for each category just listed; for example, elections for the Food 5800 category may include: No food 5801, Bar food 5803, Full menu 5804, and the like. To select an election such as “No food” 5801, typically one checks the associated box 5802. The slider 5810 at the bottom indicates that this is the last screen for My Venue Profile.

[0658] FIG. 59 provides an example embodiment of an Events Calendar 5900 which is opened when either the calendar icon 5711 or text Events Calendar . . . 5710 are selected in FIG. 57. As displayed, two months at a time, February 5901 and March 5903, are presented. By selecting the right arrow 5905 the two months are each incremented by one month; similarly, by selecting the left arrow 5904 the two months are each decremented by one month. The lighter colored days of February (1-12) represent days already passed, which can only be viewed but no longer edited; whereas, the darker colored days (13-28) represent today into the future, which can be both viewed and edited. An underlined number, such as number 13 5902, signifies that the number may be selected to bring up the detailed calendar for that day. Selecting (e.g., clicking on) number 13 5902 in the February 2006 calendar brings up the Current Events List 6000 of FIG. 60. Selecting Back 5906 reverts to the previous screen.

[0659] FIG. 60 is a detailed display of an exemplary Current Events List 6000 for the date Feb. 13, 2006. Each of the four underlined events shown is summarize by five event fields, including: Type 6001, an event Name 6002, an event Start Time 6003, an event End Time 6004, and a binary indication of whether Dancing 6005 is appropriate. To delete a listed event, one selects the associated box, such as box 6013 next to Happy Hour 6006, and then selects Delete 6102. To delete all events, one can either individually select each associated box, or select the single box 6011, which automatically selects each box below it. To add a new event, one selects New 6014 and then completes the various event fields which appear in a new event window. The first example event listed is for Happy Hour 6006 starting at 4:00 p.m. 6008 and ending at 6:00 p.m. 6009, where dancing is specified as not really appropriate with an entry of No 6010. Note that the spot for a Name is left blank 6007 for this particular event.

[0660] FIG. 61 is the first of three screens (i.e., together with FIGS. 62 and 63) that exemplify the information a venue typically enters when adding a new event, such as when New 6014 is selected in FIG. 60. The screen in FIG. 61 is referred to as a New Event screen 6100. First the Type 6101 of event is selected. In this example, DJ Music 6102 is specified. The down-arrow 6103 is used to expand the box of selections (as shown), which in this example include: DJ Music, Live Music, Recorded Music, Comedy Show, Dance Performance, TV Sports, Activities, Happy Hour, and the like. When any of the music choices 6105 (e.g., DJ Music 6104, Live Music or Recorded Music) is selected, the lightly colored Genre box 6106 is displayed to provide a context-sensitive set of subsequent choices. (When displayed in context, the Genre box 6106 is not typically lightly colored, but is only lightly colored here to indicate that it remains grayed out until it is in context.) In this example, the list of music genre is so long that it has been figuratively wrapped 6108 to continue with the remainder of the selections 6109. The genre selected in this example is Hip Hop 6107. Other music genre choices include: 60’s, 70’s, 80’s, 90’s, A Capella, Acid, Acoustic, Alternative, Blues, Christian, Classic Rock, . . . , Soul, Techno, Vocal, and the like.

[0661] Similar to the context-sensitive music genre, if TV Sports 6110 were selected as the Type 6101, an Activities list 6111 of options may be boldly displayed. Possible TV Sports choices include: Football, Baseball, Basketball, Hockey, Tennis, and the like. In this example Baseball 6112 has been selected.

[0662] Also similar to the context-sensitive music genre, if Activities 6113 were selected as the Type 6101, an Activities list 6114 of options may be boldly displayed. Possible Activities choices include: Pool, Darts, Poker, and the like. In this example Poker 6115 has been selected. The slider 6116 indicates this screen is continued.

[0663] FIG. 62 is a continuation of the New Event screen of FIG. 61. Here the name of the DJ event is specified as “Frenchy LeFreak” 6200. As with venue information, event information may also have a Short Summary 6201 and a Long Summary 6202 for mobile and desktop screens, respectively. The time the Doors Open 6203 is specified, as is the Start Time 6204 and End Time 6205 for the event. Cover charge 6206 is specified as not existing based on a check in the box 6207. If there were a cover charge, the No box 6207 would not be checked, and the lightly colored cost box 6208 and starting time 6209 for the cover charge would become boldly colored, indicating they are relevant. Dancing 6210 is specified by checking either the Yes box 6211 or No box 6213. Since the Yes box 6211 is checked, the starting time 6212 for dancing is relevant.

[0664] If the event repeats, the Recurrence box 6214 is selected. The Recurrence box 6214 may operate like the other popular calendaring systems, such as the Recurrence option in the calendar feature of Microsoft Outlook (R), where various recurrence parameters may be selected. The slider 6215 indicates that this slide is a continuation and there is still another slide to come.

[0665] FIG. 63 is the final screen example here for adding a new event, as indicated by the slider 6311 at the bottom. In this figure, various website links are provided, including a link 6300 to information the venue provides regarding the event; as well as, a link 6301 the performer (i.e., the “talent”) provides to their own website. In a similar manner that a venue added media to embellish information about them in FIG. 57, so can a performer, or a venue, add media about an event. In FIG. 63, the filename photo1.jpg 6303 may be typed in to the box, or the underlined word Media1 . . . 6302 may be selected to bring up a browser window to allow one to search for the desired media file in a file system. To delete a media listing, the associated box 6305 is checked and Delete 6306 is selected. Each media entry has an optional Caption, such as “Frenchy” 6304 in the photo1.jpg example. Selecting New
6307 allows a new media entry to be stored. Back 6308 caused the screen to go back to the previous display. Selecting OK 6309 causes the entered information to be stored and closes the NewEvent window; and Cancel 6310 closes the NewEvent window without storing any modifications made.

[0666] FIGS. 64-69 illustrate the fields used for presenting the demographics of members at a venue, where FIG. 65 is an illustrative graph of the data tabulated in FIG. 64.

[0667] FIG. 64 again displays the Venue Console, with focus this time on View 6400. In one exemplary embodiment there are three categories of View 6400: Member Demographics 6401, Venue Characteristics 6402 and Report 6403. FIG. 64 shows how a member’s demographics may be specified. One can specify they are interested in member demographic data from only today (in this example, Feb. 13, 2006) 6404. Since the associated box is not checked, the text “Today” is lightly colored. To specify a range of dates over which member demographic data should be assembled, Range 6405 is selected, as well as Start Date 6406 and End Date 6410. One convenient way that the dates may be entered is to use the drop-down arrow 6408 to select from a list of allowable dates, including “Nov” 6407. The month, day and year may be individually selected for both the Start Date 6406 and End Date 6410, or alternately, it may be convenient to select a calendar 6409 that opens a new window and allows the user to select the date from an image of a monthly calendar, similar to what was depicted in FIG. 59 for specifying event dates. If a range of dates is selected, different slices of the data may be selected 6411 and averaged, or otherwise mathematically operated upon. A slice of data may be selected by specifying one or more days of the week over which to perform the average. Other selections include specifying whether to use members only at the venue’s venue 6419, or members that attended all venues 6420 over the selected day or range of days.

[0668] The Table Chooser 6412 button provides a user interface for specifying which demographic field or other parameter is of interest in the selected member data. For instance, one demographic field is total population 6413, which may be subdivided into Male population 6414 and Female population 6415. In the associated table, each of these populations is tabulated versus time of day, where both the raw number and percent of total is presented. For instance, in cell 6417, the total number of Females at the venue at 8:30 p.m. 6416 is 5, which corresponds to 56% of the total population of 9. Slider 6418 indicates there are subsequent slides.

[0669] If the underline word Total in FIG. 64 is selected, the tabulated data is graphed, typically in a new window. This graph is similar to the graph previously described in FIG. 30. The title is “Total: Members at My Venue” 6500. The number of people 6502 is plotted on the ordinate; whereas, the time 6503 is plotted on the abscissa. The curve 6504 designated by X is for Women; the curve 6505 designated by + is for Men; and the top curve 6506 designated by O is the total number of people. The legend 6501 is provided. At roughly 10:00 p.m. 6507 the number of men surpasses the number of women at the venue, and the number of women takes a steep drop off around midnight 6508. Selecting the underlined text for Number of People, causes the ordinate to switch from “number of people” to “percent of people”. Selecting Back 6509 causes the screen to present the previous display.

[0670] FIG. 66 is a continuation of FIG. 65 where instead of total number of people, Age 6600 and Age Range 6604 are the selected demographics to tabulate (and potentially plot), Range 6605 is 21-24 years old; cell 6608 says there are 4 people accounting for 20% of the population in the 21-24 year-old range; cell 6603 says 34.3 is the average 6601 age at 8:30 p.m. 6602. The slider is 6607.

[0671] FIG. 68 is a continuation where Salary 6800 is the selected demographic. Cell 6803 indicates that 7% of the member population at the venue at 8:30 p.m. 6802 makes less than $50,000 per year 6801. The slider is 6804.

[0672] FIG. 67 is a continuation where Music Preference 6700 is the selected demographic. Cell 6703 indicates that 45% of the member population at the venue at 8:30 p.m. 6702 likes Hip Hop 6701. The slider is 6704.

[0673] FIG. 69 is a continuation where Distance Traveled 6900 is the selected demographic. Cell 6903 indicates that 30% of the member population at the venue at 8:30 p.m. 6902 traveled less than one mile 6901. The slider is 6904. Other member demographics which a venue may wish to select to tabulate or plot include: Education, Occupation, City, Interests, Sports Preferences, and the like.

[0674] FIGS. 70-75 provide illustrative fields for promotional activities. FIG. 70 again displays the Venue Console, with focus this time on Promotions 7000. In one exemplary embodiment there are three categories of Promotions 7000: New 7001, Current 7002 and Expired 7003. The New 7001 category assists a venue operator in defining a new promotion, including selecting to whom it will be sent. The screen asks the venue to “Select Recipients” 7004. At any time, the total selected recipients is tallied. In this example, the total is 21,969 7005. To limit the number of recipients, the venue may elect to send the promotion to everyone who’s redeemed an offer at their venue within some selected time frame 7006. The venue may also similarly limit the promotion to redemptions at any venue 7007, which is what is being done in this example. The slider is 7008.

[0675] Similarly, the venue may limit the promotion to people who’ve attended their venue 7000, or any venue 7001 in some previous time frame, as shown in FIG. 71. Similarly, the venue may limit the promotion to people who’ve attended Happy Hour at their venue 7002, or any venue 7003. The slider is 7004.

[0676] FIG. 72 allows the venue to further limit the number of promotion recipients by member demographics 7200, such as Gender 7202, Age 7206, Distance 7207, whether the member’s on the venue’s VIP list 7209, the type of Music they like, their Salary, Education, Occupation, Sports interests, Outdoor Activities, Other Interests, City, and the like.

[0677] Note: When one clicks on an underlined label followed by “...”, and further followed by a box with up/down arrows, they get a selection box similar to what they get when one clicks on “To...” while addressing an email in Outlook. Also, a check box is automatically unchecked if a list is specified.

[0678] FIG. 73 demonstrates how to Select a Promotion 7300. First the Type 7301 is selected, such as: 2 for 1, Free, Discount, and the like. Next the item 7304 the Type applies to is designated, such as All Drinks, Beer/Wine, Well Drinks, Admission, Food Item, Merchandise, and the like. Next, if appropriate, a Discount 7305 is selected, where the Discount 7305 is specified in dollar amounts or percentage 7307. Typically a minimum is set for each to make sure a member gets a good offer and not just a useless advertisement. The venue may also select that a discount only applies to a second or lesser-priced item 7308. Short 7310 and long 7311 logos may also be specified to be associated with the promotion.
[0679] In FIG. 74 allows the venue to select dates 7400 that the promotion is sent out 7401, the promotion begins 7405, expires 7406, and whether there is a Recurrence 7407. Any of the type of date entry techniques already described or otherwise convenient may be employed. If the number of recipients is greater than desired based on the other types of limitations previously discussed, the venue may limit the recipients 7408 by requiring that the promotion fit a budget 7409, that the number of recipients not exceed a limit 7412, that the number of redemptions of the offer not exceed a limit 7415, and the like. Any number entered in box 7412 is reflected in the line 7414. When all the promotion parameters are specified, the venue reviews the promotion 7416.

[0680] FIG. 75 displays a user friendly summary of the promotion in the area 7500. The promotion can be saved 7501 for later, printed 7502, canceled 7504, or submitted 7505, and the like.

[0681] It is evident from the above description that the subject invention provides for an effective and efficient way for people and venues to communicate for increasing the enjoyment of individuals in visiting venues and for enhancing revenues received by the clubs. The ability to evaluate a particular venue before traveling to the venue encourages individuals to participate in the activities of the venues. Individuals are informed as to the demographics at a venue and available rewards at the venue. The system provides for location based marketing and social networking in a unique and more efficient way as compared to prior methods.

[0682] All publications and patent applications cited in this specification are herein incorporated by reference as if each individual publication or patent application were specifically and individually indicated to be incorporated by reference.

[0683] Although the foregoing invention has been described in some detail by way of illustration and example for purposes of clarity of understanding, it will be readily apparent to those of ordinary skill in the art in light of the teachings of this invention that certain changes and modifications may be made thereto without departing from the spirit or scope of the appended claims.

What is claimed is:

1. A system comprising a network of venues and an organization communicating with said venues, said organization having people as members, said venues having promotions or characteristics of interest to said members, wherein when a member transacts a transaction at a venue, the location and time of said transaction is communicated to said organization, said system comprising:
   - mobile communication devices of said members;
   - a system data processor having data comprising:
     A) member and venue information;
     B) location information received by said data processor in the timeframe of said transaction, said location information comprising the location and time of said transaction;
     and
     C) said characteristics or promotion of at least one venue; wherein when said transaction is transacted said location information is transmitted from the site of said venue to said data processor;
     said data processor transmits said location information to at least one venue or said data processor has previous instructions from said at least one venue as to whom should receive characteristic or promotion information; said at least one venue may transmit characteristic or promotion information based on said location information to said data processor or may transmit characteristic or promotion information prior to receipt of said location information;
     and
     said data processor transmits the characteristic or promotion information received from said at least one venue to said mobile communication device.

2. A system for providing a service to promoters associated with an organization having people as members, said promoters having characteristics or promotions of interest to said members, said system comprising:
   - mobile communication devices of said members;
   - a system data processor having system data comprising:
     A) location information as a result of a transaction at a venue;
     and
     B) said characteristics or said promotions; and
   - said system data processor processing and providing a said member member-intended information comprising at least a portion of said characteristics or said promotions.

3. A system according to claim 2, wherein said location information includes a narrow range of time for said transaction.

4. A system according to claim 2, wherein said location information includes a narrow vicinity of location.

5. A system according to claim 2, wherein said mobile communication device of said member has position-sensing capability and at the time of said transaction provides said location information.

6. A system according to claim 5, wherein said location information includes the location of said member.

7. A system according to claim 5, wherein said position-sensing capability employs at least one of GPS, A-GPS, cell-towers, Wi-Fi access points, WiMAX and IP addresses.

8. A system according to claim 2, wherein said member-intended information is viewable on said mobile communication device of a said member.

9. A system according to claim 2, wherein at least a portion of the traits, behaviors or demographics of people who attend said venue is provided to said promoter.

10. A system according to claim 2, wherein said promoter is associated with said venue.

11. A system according to claim 2, wherein said promoter is not associated with said venue.

12. A system according to claim 2, wherein a transaction entity provides:
   - (A) said location information to said system data processor, and optionally said system data processor refines said location information, or
   - (B) the transaction occurrence time when said transaction occurs, wherein said mobile communication device of said member provides said location information associated with said transaction occurrence time to said system data processor, and wherein said mobile communication device receives said location information from at least one of (a) position-sensing capability, (b) data provided by said member and (c) another organization.

13. A system according to claim 12, wherein said another organization determines said location information from position-sensing capability associated with said mobile communication device or from data provided by said member.

14. A system according to claim 12, wherein said position-sensing capability is associated with said mobile communication device.

15. A system according to claim 12, wherein said transaction is a redemption transaction or a purchase transaction.
16. A system according to claim 12, wherein said transaction entity is said organization.

17. A system according to claim 12, wherein said location information comprises at least one of (a) latitude and longitude, (b) a code, (c) Zipcode, (d) name of said venue and (e) location center and radius.

18. A system according to claim 2, wherein said transaction is a redemption, and said system data processor determines said location information from the location of said venue where said redemption occurs.

19. A system according to claim 2, wherein said transaction is a purchase transaction and a purchase transaction entity provides said location information to said system data processor.

20. A system according to claim 2, wherein said transaction is a purchase transaction, a purchase transaction entity notifies said system data processor of said purchase transaction, and said mobile communication device having said position-sensing capability provides said location information to said system data processor.
