[000258] It is understood that the foregoing detailed description and examples are illustrative only and are not to be taken as limitations upon the scope of the invention. Various changes and modifications to the disclosed embodiments, which will be apparent to those of skill in the art, may be made without departing from the spirit and scope of the present invention. Further, all patents and other publications identified are expressly incorporated herein by reference for the purpose of describing and disclosing, for example, the methodologies described in such publications that might be used in connection with the present invention. These publications are provided solely for their disclosure prior to the filing date of the present application. Nothing in this regard should be construed as an admission that the inventor is not entitled to antedate such disclosure by virtue of prior invention or for any other reason. All statements as to the date or representation as to the contents of these documents is based on the information available to the applicants and does not constitute any admission as to the correctness of the dates or contents of these documents.

CLAIMS

What is claimed is:

1. A method of determining whether a subject has, or is at risk of developing, or is at a given stage of a condition afflicting a tissue of interest, comprising measuring in a biological sample from the tissue of interest expression level of one or more of the miRNAs, wherein the miRNAs comprise a sequence selected from SEQ ID NO: 1 to SEQ ID NO: 47,972, wherein the alteration of the level of said one or more miRNAs as compared to the level of the same one or more miRNA in a reference sample is indicative of the subject either having, or being at risk of developing, or is at a given stage of the condition.
2. The method of claim 1, wherein isoforms of the miRNAs are used.
3. The method of claim 1 or 2, wherein the reference sample represents a normal condition of the tissue.
4. The method of claim 1 or 2, wherein the reference sample represents a recognizable stage of an abnormal condition of the tissue.
5. The method of any of claims 1-4, wherein the tissue of interest is breast.
6. The method of any of claims 1-4, wherein the tissue of interest is pancreas.
7. The method of any of claims 1-4, wherein the tissue of interest is blood.
8. The method of any of claims 1-4, wherein the tissue of interest is prostate.
9. The method of any of claims 1-4, wherein the tissue of interest is colon.
10. The method of any of claims 1-4, wherein the tissue of interest is lung.
11. The method of any of claims 1-4, wherein the tissue of interest is skin.
12. The method of any of claims 1-4, wherein the tissue of interest is brain.
13. The method of any of claims 1-4, wherein the tissue of interest is liver.
14. The method of any of claims 1-4, wherein the tissue of interest is heart.
15. The method of any of claims 1-4, wherein the tissue of interest is muscle.
16. The method of any of claims 1-4, wherein the tissue of interest is ovary.
17. The method of any of claims 1-4, wherein the tissue of interest is testicle.
18. The method of any of claims 1-4, wherein the tissue of interest is bone marrow.
19. The method of claim 5, wherein the condition of interest is ductal in situ carcinoma (breast carcinoma).
20. The method of claim 5, wherein the condition of interest is lobular in situ carcinoma.
21. The method of claim 5, wherein the condition of interest is invasive breast cancer.
22. The method of claim 6, wherein the condition of interest is early stage cancer of

the pancreas.

23. The method of claim 6, wherein the condition of interest is late stage cancer of the pancreas.
24. The method of claim 7, wherein the condition of interest is leukemia.
25. The method of claim 8, wherein the condition of interest is cancer of the prostate.
26. The method of claim 9, wherein the condition of interest is cancer of the colon.
27. The method of claim 10, wherein the condition of interest is cancer of the lung.
28. The method of claim 11, wherein the condition of interest is melanoma.
29. The method of claim 11, wherein the condition of interest is psoriasis.
30. The method of claim 12, wherein the condition of interest is Alzheimer's disease.
31. The method of claim 12, wherein the condition of interest is Parkinson's disease.
32. The method of claim 12, wherein the condition of interest is cancer of the brain.
33. The method of claim 13, wherein the condition of interest is cancer of the liver.
34. The method of claim 14, wherein the condition of interest is cardiomyopathy.
35. The method of claim 15, wherein the condition of interest is a muscle disorder.
36. The method of claim 16, wherein the condition of interest is ovarian cancer.
37. The method of claim 17, wherein the condition of interest is testicular cancer.
38. The method of claim 18, wherein the condition of interest is myelodysplastic syndrome (MDS) or myeloproliferative disorders (MPD).

FIG. 1A

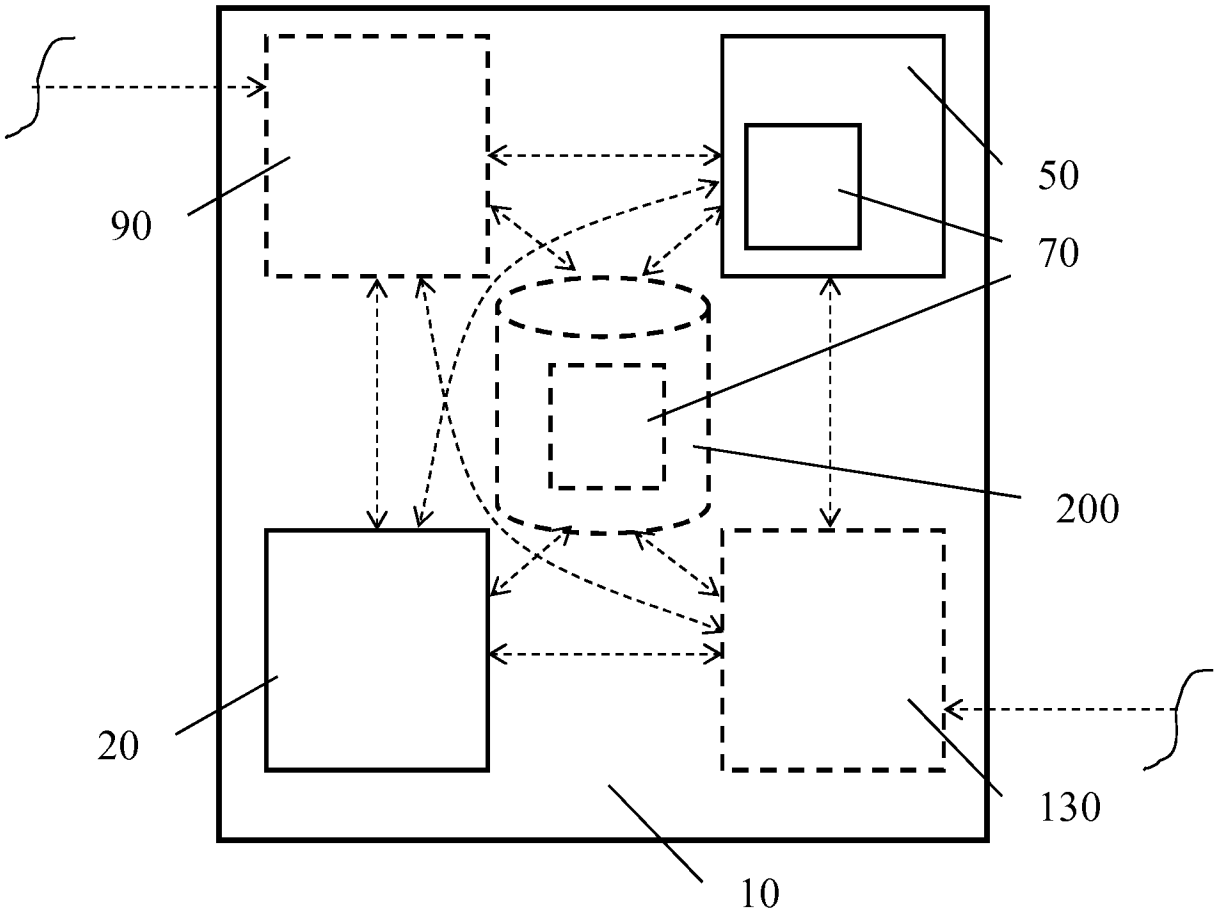

FIG. 1B

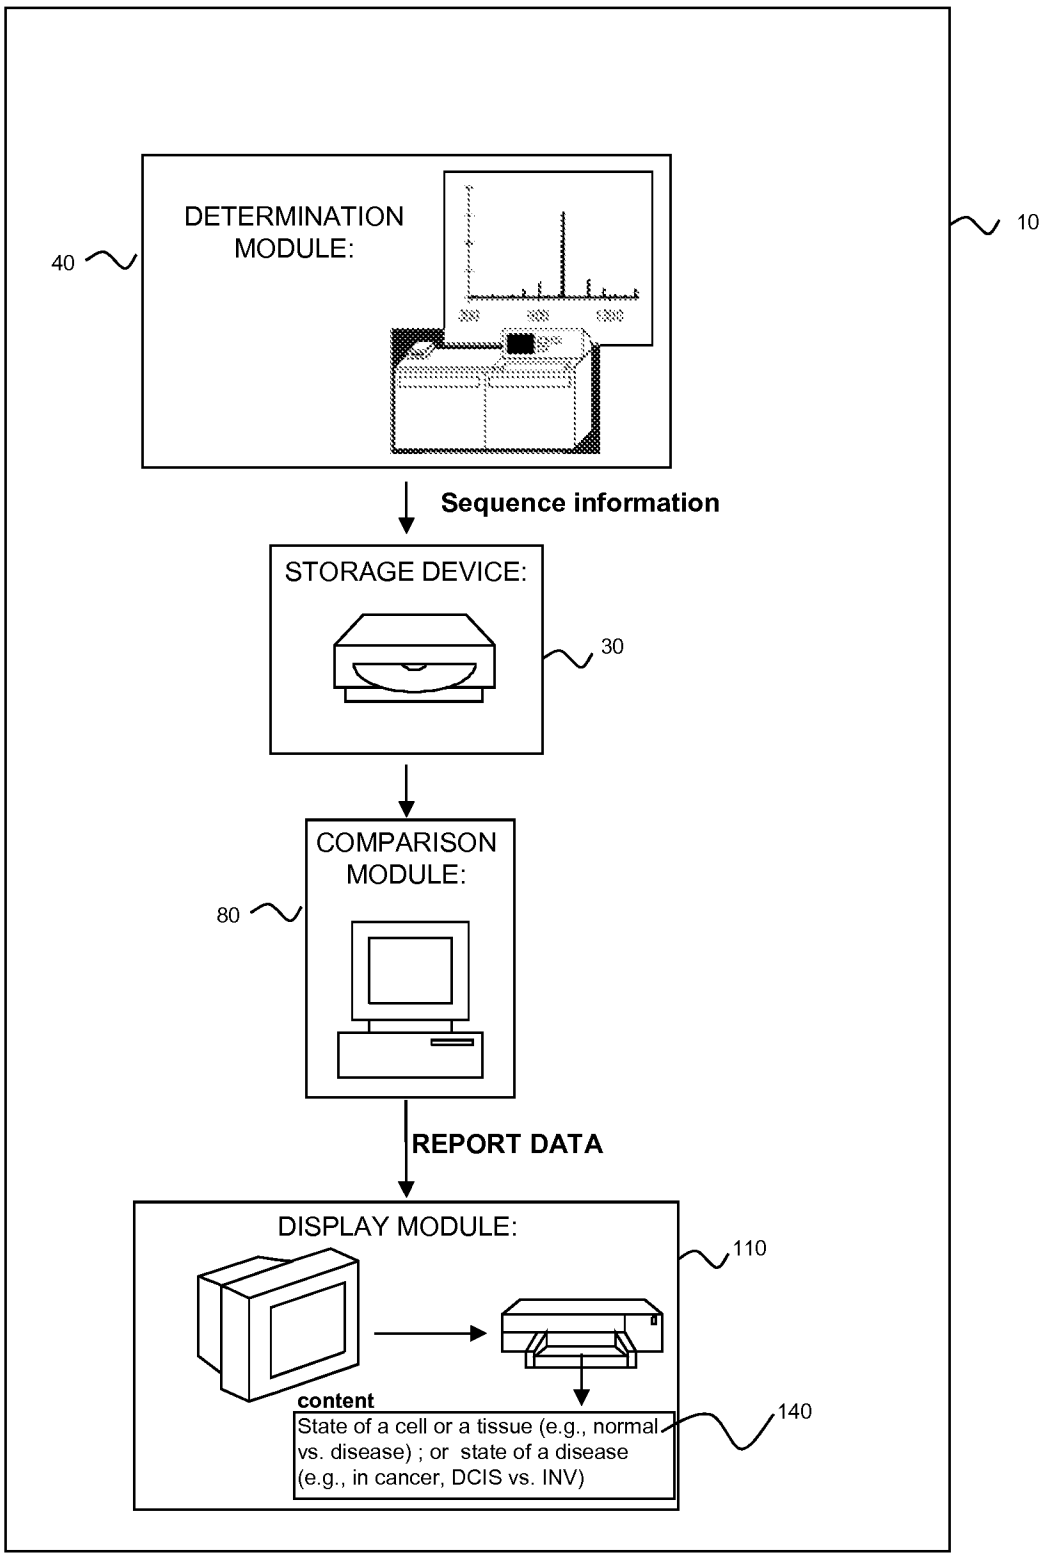
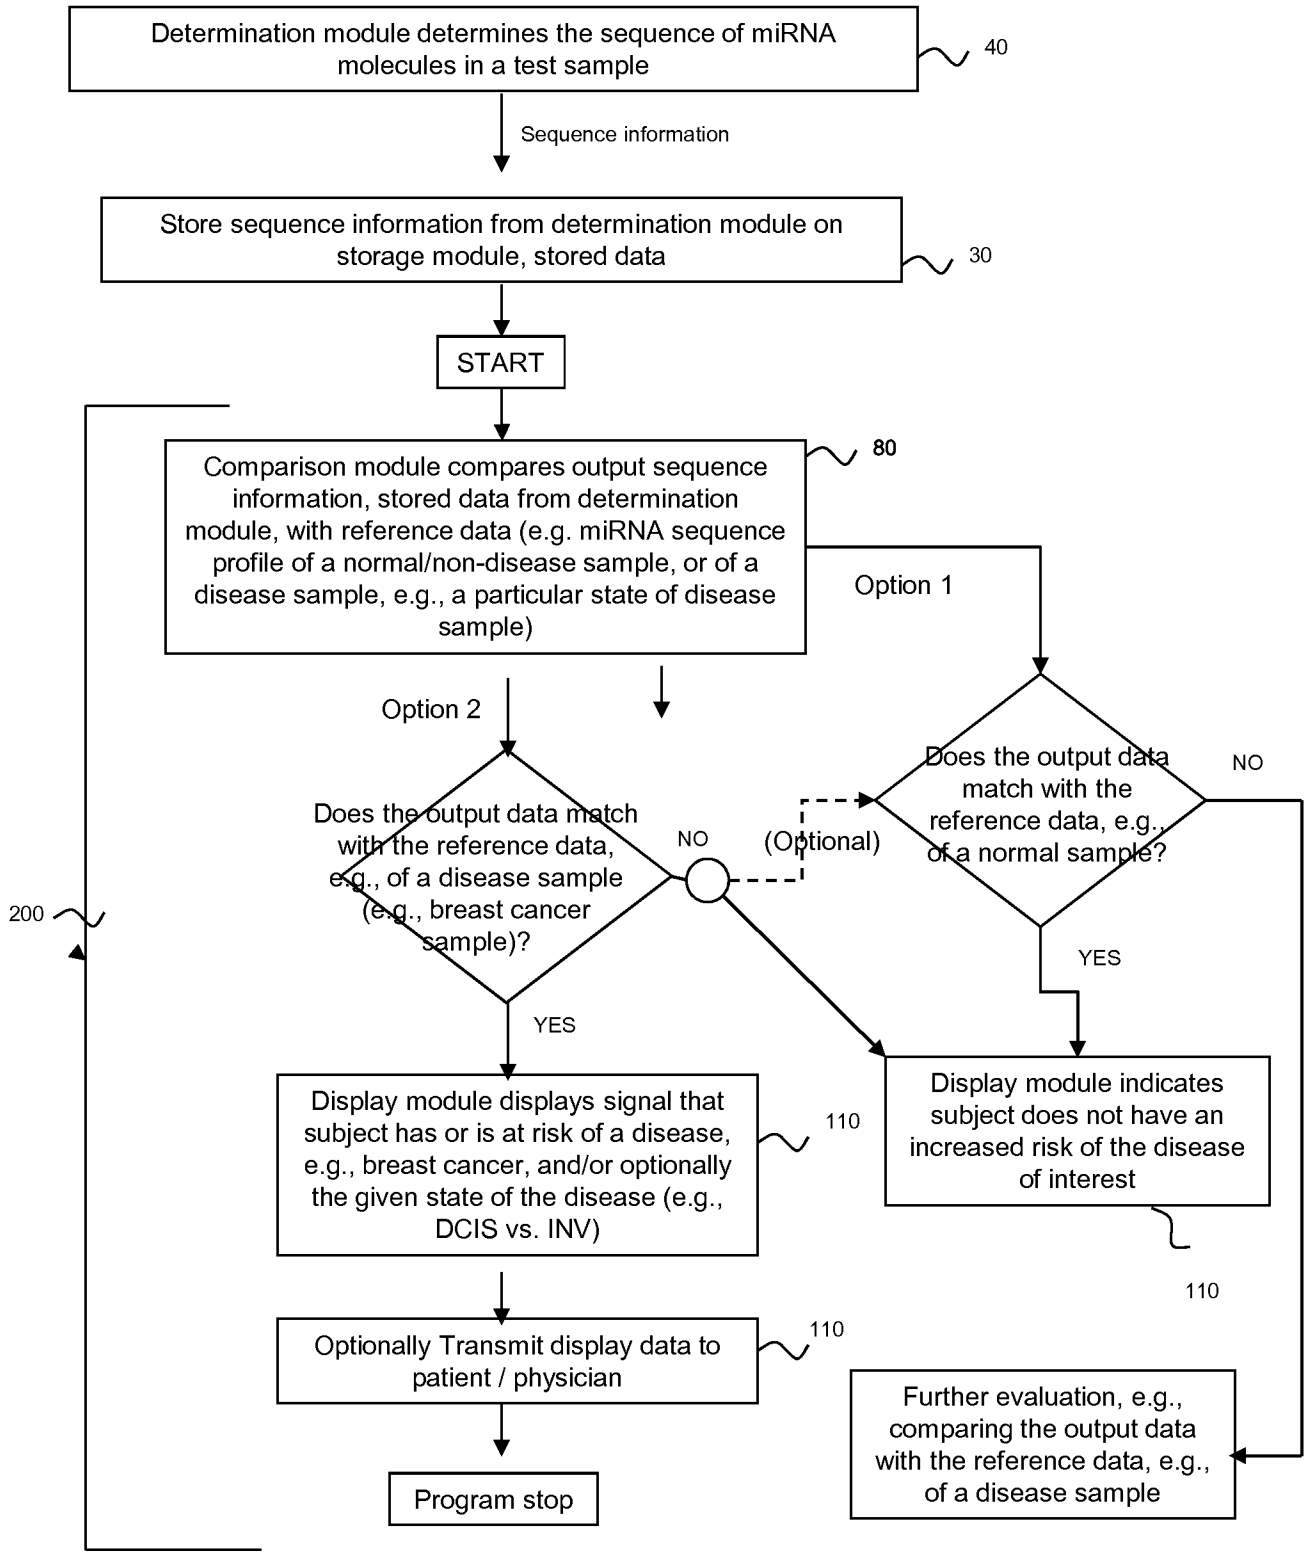


DETERMINATION MODULE:
40
10
Sequence information
STORAGE DEVICE:
30
COMPARISON MODULE:
80
REPORT DATA
DISPLAY MODULE:
110
content
State of a cell or a tissue (e.g., normal vs. disease) ; or state of a disease (e.g., in cancer, DCIS vs. INV)
140

FIG. 2



Determination module determines the sequence of miRNA molecules in a test sample
40
Sequence information
Store sequence information from determination module on storage module, stored data
30
START
Comparison module compares output sequence information, stored data from determination module, with reference data (e.g. miRNA sequence profile of a normal/non-disease sample, or of a disease sample, e.g., a particular state of disease sample)
80
Option 1
Option 2
Does the output data match with the reference data, e.g., of a disease sample (e.g., breast cancer sample)?
NO
(Optional)
Does the output data match with the reference data, e.g., of a normal sample?
NO
YES
YES
200
Display module displays signal that subject has or is at risk of a disease, e.g., breast cancer, and/or optionally the given state of the disease (e.g., DCIS vs. INV)
110
Display module indicates subject does not have an increased risk of the disease of interest
110
Optionally Transmit display data to patient / physician
110
Further evaluation, e.g., comparing the output data with the reference data, e.g., of a disease sample
