UNITED STATES PATENT OFFICE.

LOUIS DRUDE AND EDMOND ST. ARNAULD, OF MERIDEN, CONNECTICUT.

CARD-TABLE ATTACHMENT.

SPECIFICATION forming part of Letters Patent No. 378,242, dated February 21, 1888.

Application filed June 27, 1887. Serial No. 242,562. (No model.)

To all whom it may concern:

Be it known that we, LOUIS DRUDE and EDMOND ST. ARNAULD, of Meriden, in the county of New Haven and State of Connecticut, have
5 invented a certain new and useful Improvement in Card-Table Attachments, of which the following is a description, reference being had to the accompanying drawings, wherein—

Figure 1 is a top view of the device embodying our said improvement. Fig. 2 is a view
10 in central vertical sections on the plane $x x$.

The letter a denotes a metallic plate, and b a spring-clamp for attaching the plate to the table, the table being grasped between the
15 plate and the clamp.

The letter c denotes a cup containing the cigar-rest d and vertical match-boxes e .

The letter f denotes a sliding slate, the edges of the plate a being turned over to form ways
20 for this purpose. The object of making the slate a sliding slate is that when the device is in use the slate may be pulled out, so as to form the cap or cover for the cup c .

The letter g denotes a bead counter as a
25 whole. Points of the game may be kept on the bead counter and games or other memoranda may be kept on the slate.

The letter h denotes the case, (such as a card-case for a pack of cards,) provided on the bottom with a socket, i , fitting upon the spring-clamp b . When the device is not in use, the
30 pack of cards can be kept in this card-case.

When it is desired to use the device, the card-case h , which is held under the plate a by the force of the spring b , is removed by drawing it longitudinally, so that the spring b will
35 slip from the socket i , that is on the bottom of the card-case, and the device slipped on the edge of a table, the plate a resting on the top, while the spring b grasps the under side of the table and firmly holds the device in position.
40

We claim as our improvement—

1. In combination with the plate a , the cup c and sliding slate f , all substantially as described, and for the purpose set forth.
45

2. In combination with the plate a and cup c , the spring b and the case h , provided with a socket, i , all substantially as described, and for the purpose set forth.

LOUIS DRUDE.

EDMOND ST. ARNAULD.
