UNITED STATES PATENT OFFICE.

CHARLES B. MACNEAL, OF PHILADELPHIA, PENNSYLVANIA, ASSIGNOR TO
ELIZABETH MACNEAL, OF SAME PLACE.

PUZZLE.

SPECIFICATION forming part of Letters Patent No. 524,258, dated August 7, 1894.

Application filed December 9, 1893. Serial No. 493,251. (No model.)

To all whom it may concern:

Be it known that I, CHARLES B. MACNEAL, a citizen of the United States, residing at Philadelphia, county of Philadelphia, and State of Pennsylvania, have invented a Puzzle, of which the following is a specification, due reference being had to the accompanying drawing, forming a part thereof.

My invention relates to a puzzle in which a bell or a like article is suspended over the central inside portion of a box in which are small globular objects the end sought being the working out or accomplishing of a certain predetermined result.

My invention consists of a round or other form of box furnished with small globular objects. Said box being provided with a device forming an elevation over its central inside portion, from which is suspended a bell or a similar article for a purpose presently explained.

The object of my invention is to so handle the box that the globular objects contained therein may be caught under the suspended article employed.

In the drawing, my puzzle is well shown by one view, the accompanying drawing being deemed necessary to fully illustrate my invention.

The several parts in the drawing are indicated by numerals.

Similar numerals denoting like parts where-

ever found and with reference to the same 1, is a box preferably circular in form.

2, are parts of the device forming the elevation over the inside central portion of the box.

3 is the appendage suspending the bell 4, from the device forming the elevation, and 5 are the small globular objects of which two are shown.

A puzzle of the character described is interesting and amusing, is cheap and simple in construction and affords a wide range to the fancy of the manufacturers in that many details of construction may be varied without departing from the spirit of the invention or the true scope thereof.

Having described and ascertained the nature of my invention, I claim and desire to secure by Letters Patent—

A puzzle as herein shown and described consisting of a round or other form of box furnished with small globular objects and a device forming an elevation over the center of its inside portion from which is suspended an inverted cup-shaped article, as and for the purpose set forth.

In testimony whereof I affix my signature in presence of two witnesses.

CHARLES B. MACNEAL.
