(54) **Door lock**

(57) A door lock comprising a lock casing (1) with a first operating axis (3) arranged for handle actuation and a first follower arrangement (4) mounted thereon, a second operating axis (5) arranged for key and/or turning knob actuation and a second follower arrangement (6) mounted thereon, a latch bolt (7) spring-loaded to a position protruding from the lock casing, which latch bolt has two protrusion positions of different lengths, and an auxiliary bolt (8) for controlling the protrusion of the latch bolt (7). The lock casing (1) is also provided with a hook bolt (13), which may be positively urged to a protruding position and to a retracted position, and with activating means (16), which are selectively arranged so as to be moved from a first position, in which they prevent the protrusion of the hook bolt (13) to a second position, in which they allow the protrusion of the hook bolt (13).
