(54) **Clock structure**

(57) A new clock structure comprising time indication means (4) and reference means (3) associated to a dial (2) in a specularly inverse way. In clocks with hands (4), the latter rotate anticlockwise, whereas in liquid crystals clocks and the like, figures are specularly inverse. Mirror means (6) may be provided to read the time through the reflected image (2', 3', 4') of the dial (2). The mirror means may comprise a mirror (6) pivoted to the dial (2) and having a reflecting side which, in use faces the dial, whereby the mirror rotation lets the observer to find a position in which he can see in the dial the reflected image (21) of the time to read (31,41). The mirror means may comprise on it reference means (22) to read the time, auxiliary reference means (20) being provided on the dial and on the mirror means (21), whereby the coincidence of the former on the latter allows a right time reading.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 98 11 4176

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
