UNITED STATES PATENT OFFICE.

JULIA NOTT WAUGH, OF SAN ANTONIO, TEXAS.

CAMP BEDDING-ROLL.

1,263,825.

To all whom it may concern:

Be it known that I, JULIA NOTT WAUGH, a citizen of the United States of America, and a resident of San Antonio, county of Bexar, and State of Texas, have invented certain new and useful Improvements in Camp Bedding-Rolls, of which the following is a full and clear specification.

The object of this invention is to provide a bedding roll in which the main sheet shall be adapted to receive a mattress or be stuffed with straw or grass or leaves, to enable it to be used as a bed-sack, as more fully hereinafter set forth.

In the drawing—

Figure 1 is a perspective view of my improved appliance opened out flat; and—

Fig. 2 is a cross-sectional view with the flaps folded into place.

In the drawing, a designates the main sheet of the appliance and b the two side flaps attached at their longitudinal edges to the longitudinal edges of the main sheet and extending the full length of the main sheet and adapted to be folded over upon the main sheet for use as bed covers. c designates another flap hingedly secured to the foot-end of the main sheet and adapted to be, like flaps b, folded over upon the main sheet for use as a bed cover. The main or base sheet has a supplemental sheet d fastened at its edges to the longitudinal edges of the main sheet and also along the top or head-end of the main sheet, the foot-end of this sheet d being unattached to the main sheet, whereby, by having this sheet d made full, a pocket is formed the full length of the main sheet, into which pocket a mattress or a stuffing of hay, grass or leaves may be inserted to enable the appliance to be used as a bed.

When the appliance is used as a bed, the side flaps and the foot flap are folded over upon the body of the person lying upon the mattress or sack. The foot flap serves to close the lower end of the bed-sack. When the pocket is not used to inclose a mattress during transportation, it may, of course, be used as a sort of clothing roll or to pack camp equipment in when the camp is to be moved.

The nature and scope of the invention having been thus indicated and its preferred embodiment having been specifically described, what is claimed as new is:

A bed roll consisting of a main sheet and a top sheet affixed to the main sheet along the longitudinal edges thereof and along its head edge, the foot edge of this top sheet being unconnected to the main sheet, thereby forming a pocket or pouch for the reception of a mattress, etc., side flaps attached to the side edges of the main sheet, and a foot flap attached to the foot edge of the main sheet, for the purposes set forth.

In testimony whereof I hereunto affix my signature.

JULIA NOTT WAUGH.
