# United States Patent [19]

[11] Patent Number: Plant 7,867

de Jong

[45] Date of Patent: May 12, 1992

[54] BOUWARDIA NAMED REDROX

[58] Field of Search ..... Plt./68

[76] Inventor: John M. F. de Jong, Floraweg 67,  
2371 AM Roelofarendsveen,  
Netherlands

Primary Examiner—James R. Feyrer  
Attorney, Agent, or Firm—Harold L. Jackson

[21] Appl. No.: 619,024

[57] ABSTRACT

[22] Filed: Nov. 28, 1990

A new Bouvardia variety characterized by the soft red, double flowers. The blooms have a better stem quality, and a longer vase life.

[51] Int. Cl.<sup>5</sup> ..... A01H 5/00

[52] U.S. Cl. .... Plt./68

## 1

### BACKGROUND OF THE NEW PLANT

This new Bouvardia originated as a mutation from the breeding stock plant Roxanne. The particular mutation was selected by me in 1989 for propagation and testing because of the distinctive coloration of its blossoms. Specifically, the flower is a lobed tubular corolla which is double. It is deep reddish pink in color. The selected plant was propagated by me in Roelofarendsveen, Holland through several generations of cutting propagation to establish that its distinctive characteristics hold true from generation to generation and appear to be firmly fixed.

Breeding efforts commenced 1984 in Roelofarendsveen, Holland where the breeding stock is maintained. My new variety, Redrox, differs from the mother plant, Roxanne, in that it has soft red flowers.

### DESCRIPTION OF THE DRAWING

This new variety of the Bouvardia plant is illustrated by the accompanying photograph which shows a blooming cyme of the plant with buds and flowers in various stages of opening.

### DESCRIPTION OF THE NEW PLANT

The following is a detailed description of my new Bouvardia plant with color designations according to The National Bureau of Standards, Standard Reference Material, #2107, comprising the ISCC-NBS Centroid Color Charts and NBS Special Publication, #440.

### THE PLANT

Origin: Mutation.  
Parentage: Stock plant.  
Classification: Rubiaceae family.  
Form: A vigorously growing small shrub with leaves arranged opposite and flowers in terminal cymes.  
Height: Up to 80.0 cm.  
Growth: Vigorous.  
Root stock: Rhizome.  
Foliage:  
Quantity.—Many.  
Number of leaves.—10–15 per stem.  
Size of leaf.—About 7.5 cm.  
Shape of leaf.—Lanceolate.  
Texture.—Smooth.  
Color.—Upper side: Green. Under side: Green.

### THE BUD

Form: Flask-shaped.

## 2

Size: Small.

Diameter.—About 0.75 cm.

Length.—About 2.5 cm.

Peduncle:

Length.—About 8.0 cm.

Texture.—Smooth.

Form.—Erect.

### THE FLOWER

10 Blooming habit: Continuously year-round.

Flower size:

Diameter.—About 1.5–2.0 cm.

Depth.—About 2.5 cm.

Borne: Terminal cymes.

15 Shape: Lobed tubular corolla.

Petalage:

Number of petals.—Eight–Twelve.

Arrangement.—Two to three concentric circles of four arranged alternately.

Form.—Elliptical.

Texture.—Smooth.

Appearance.—Satiny.

Color:

Outer petals.—Soft red (No. 12).

Inside petals.—Soft red (No. 12) with a white (No. 263) heart.

Persistence: The flowers hang on and dry.

Main stem or stalk:

Length.—Up to 80.0 cm.

30 Color.—Green.

Character.—Sturdy and erect.

Lasting quality of flower: About 25 days. As a cut flower 14 days.

### REPRODUCTIVE ORGANS

Stamens:

Number.—Four.

Arrangement.—Alternate with corolla lobes.

40 Anthers:

Size.—About 0.25 cm.

Color.—White (No. 263).

Filaments:

Length.—About 1.0 cm.

Color.—White (No. 263).

45 Pollen.—Black (No. 267).

Pistils:

Number.—One.

Styles.—Length: About 1.0 cm. Color: White (No. 263).

Fruit:

Plant 7,867

3

*Shape.*—Loculicidal capsule, seeds winged.

*Color.*—Brown.

This plant is particularly noted for the distinctive coloration of its flowers, which coloration does not

4

clearly resemble that of any other Bouvardia plant previously known to me.

I claim:

1. A new and distinctive Bouvardia cultivar, substantially as herein shown and described, characterized by the distinctive coloration of its profusely blooming flowers.
