(54) Title: REVERSIBLE GARAGE DOOR TRACK BRACKET

(57) Abstract: A reversible garage door track bracket (10) comprises a short flange (16) and a perpendicularly oriented long flange (18). The short flange (16) includes a slot (40) which has a wide portion (42) for receiving a jamb bolt (24), a narrow portion (44) for receiving a track bolt (26), and a plurality of holes (52) each for receiving one of a plurality of rivets (22). The long flange (18) is identical to the short flange (16), except in length. In use, an installer chooses which flange (16, 18) to secure to the track (12), by examining a garage door's thickness. The installer secures the bracket (10) to the track (12) using either the track bolt (26) or the plurality of rivets (22). If the installer desires a different mounting distance (90), the installer can simply remove the two bolts (24, 26), reverse the bracket (10), and reinstall the two bolts (24, 26).
INTERNATIONAL SEARCH REPORT

A. CLASSIFICATION OF SUBJECT MATTER
IPC(7) : A47F 5/00; F16M 13/00; E05D 15/06
US CL : 248/300.558, 544, 200, 224.8, 223.31, 225.11, 254; 16/94R; 160/201
According to International Patent Classification (IPC) or to both national classification and IPC.

B. FIELDS SEARCHED
Minimum documentation searched (classification system followed by classification symbols)
U.S. : 248/300.558, 544, 200, 224.8, 223.31, 225.11, 254; 16/94R; 160/201

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)
