(54) **Improved module carrier for two modules**

(57) The proposed module carrier has a noticeably prismatic body and without an upper base, thus establishing a mouth for the introduction of the corresponding modules. The introduction of said modules is easier because of an inclined plane provided in said mouth which

allows the reduction of the module insertion force inside the module carrier, all of which being assisted because of an interior arrangement of small walls allowing the separation between the two modules that can be included inside said module carrier and which are of the lateral insertion type.
