ATTORNEY

UNITED STATES PATENT OFFICE.

ALBERT A. LOCKWOOD, OF NEW HAVEN, CONNECTICUT.

BOTTLE-HOLDER.

1,369,928. Specification of Letters Patent. Patented Mar. 1, 1921.

Application filed July 30, 1920. Serial No. 400,268.

To all whom it may concern:

Be it known that I, ALBERT A. LOCKWOOD, a citizen of the United States, residing in the city of New Haven and State of Connecticut, have invented new and useful Improvements in Bottle-Holders, of which the following is a specification, reference being had to the accompanying drawings.

The present invention pertains to devices for holding nursing bottles for infants, and the object is to provide a simple and efficient device of this kind which may be readily attached to a crib, baby carriage or the like, and wherein the nursing bottle may be located and securely held for the use of the infant, without the attention of any attendant.

In the drawings:

Figure 1 is a perspective view, showing the device in use on a crib.

Fig. 2 is a detail of the holder apart from the crib.

Fig. 3 is a plan view.

Fig. 4 is an edge elevation.

The invention consists of a cross-bar 1 adapted to lie across the side rails 2 of a crib, baby carriage or the like, where it may be secured by means of the straps 3 which pass through slots 4 in the ends of the cross bar 1 and around the side rails 2. The cross bar 1 is provided with a medial sloping trough or cavity 5 which conforms in general to the shape of a nursing bottle 10, and extends across the bar and is lower or deeper at one end 6 than at the opposite end 7. A two-piece strap 8—8′ extends from the bar 1 from opposite sides of the trough 5 and the free ends are joined across the trough by a buckle 9. The nursing bottle 10 is laid on its side in the trough 5, with the mouth 11 at the lower or deeper part of the trough, thus permitting the milk to flow entirely out of the bottle. The bottle is secured in the trough 5 by means of the strap 8—8′.

While I have herein described a certain specific method of constructing and assembling the elements of my invention, it is understood same may be varied in minor details, not departing from the spirit of my invention as defined in the appended claim.

What I claim to be new and patentable is:

A nursing bottle holder for cribs, comprising a cross bar; a strap at each end thereof for securing the bar to the crib; a sloping trough formed in the bar to hold the nursing bottle; and straps extended across the trough as means for securing the nursing bottle therein.

ALBERT A. LOCKWOOD.
