Letters Patent

The schedule referred to in these Letters Patent and making part of the same containing a description in the terms of the said Samuel Randall himself of his discovery are brought

An open Grate is brought which from experience before it was adopted in the Chimney flues or flues affixed under the coal or element of the fire rising the back or side of which are contiguous the coal &c. and adjacent to the bottom of it so that no air can pass in the chimney flue or flues without first passing through or obliquely into and through the coal or element of the fire that is the fire clay

The face of the draught may be governed by a movable plate of cast or sheet iron fixed above the fire or any thing that will usefully or partially supply the chimney flue or flue with unrarified air. This principle of the draught may be applied to any fire place stove or furnace
