(54) **Remote monitoring system of cooling apparatus**

(57) A remote monitoring apparatus 3 for detecting an abnormal operation of an air conditioner by abnormal operation detecting means 11a retrieves a storage region 11c into which the detected abnormal operation has been stored. If there is a content identical to the presently sensed content in this storage region, then report judging means 11d cancel to report. Conversely, if there is no content identical to the presently sensed content,

then reporting means 11b reports via a public line to a remote monitoring terminal. When present reporting suppressing time T has passed, the abnormal operation content of the storage region is automatically erased. As a result, it is possible to suppress reporting of such an abnormal operation which continuously occurs within preselected time after this abnormal operation has once occurred.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 97 12 1191

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
