(54) Title: AQUEOUS CLEAR COATING COMPOSITION AND METHOD FOR FORMING MULTILAYER TOPCOAT FILM

(57) Abstract: The present invention provides an aqueous clear coating composition comprising (A) an aqueous dispersion of a hydroxy group- and acid group-containing particulate resin having a hydroxy value of 30 to 200 mg KOH/g, an acid value of 5 to 50 mg KOH/g, and a mean particle size of 50 to 300 nm, and (B) a crosslinking agent, the composition having a viscosity such that the lowest viscosity value of the composition as measured over the temperature range of 30°C to 150°C at a frequency of 0.1 Hz at a solids content of at least 90 mass % is 30 Pa·s or less; and a method for forming a multilayer topcoat film using the aqueous clear coating composition.

* Special categories of cited documents:

- *A* document defining the general state of the art which is not considered to be of particular relevance
- *E* earlier document but published on or after the international filing date
- *L* document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- *O* document referring to an oral disclosure, use, exhibition or other means
- *P* document published prior to the international filing date but later than the priority date claimed

T later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

X document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

Y document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
