(54) Title: ENDOPROSTHESES

(57) Abstract: An implantable endoprosthesis comprising a bioerodible body comprising a first bioerodible material, wherein the bioerodible body carries a plurality of discrete, spaced apart bioerodible regions comprising a second bioerodible material different from the first bioerodible material. A method of making the implantable endoprosthesis is disclosed too.

* Special categories of cited documents :

- *A* document defining the general state of the art which is not considered to be of particular relevance
- *E* earlier document but published on or after the international filing date
- *L* document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- *O* document referring to an oral disclosure, use, exhibition or other means
- *P* document published prior to the international filing date but later than the priority date claimed

T later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

X document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

Y document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
