INVENTOR

BY Victor J. Evans

ATTORNEY

WITNESS:

Patented Apr. 5, 1927. 1,623,877

UNITED STATES PATENT OFFICE.

CHESTER E. KJETSAA, OF PHILADELPHIA, PENNSYLVANIA.

TOILET BOX.

Application filed December 7, 1925. Serial No. 73,843.

This invention relates to combination toilet boxes and has for its primary object the provision of a box adapted to carry toilet articles such as a comb, tooth brush, tooth paste and soap, all of which are adapted to fit in a separate compartment designed and shaped to accommodate the shape of tne particular article associated therewith.

A further object is to provide a box adapted to receive toilet articles and to retain the latter in a sanitary condition, free from dust and foreign matter but exposed to atmospheric air for keeping the articles in a dry state.

This invention also consists in certain other features of construction and in the combination and arrangement of the several parts, to be hereinafter fully described, illustrated in the accompanying drawings and specifically pointed out in the appended claim.

In describing my invention in detail, reference will be had to the accompanying drawings wherein like characters denote like or corresponding parts throughout the several views, and in which:

Figure 1 is a perspective view of the tray which forms a part of the present invention,

Figure 2 is a longitudinal sectional view through the box and tray therefor,

Figure 3 is a vertical sectional view therethrough.

Referring to the drawings in detail the reference numeral 1 indicates the box of rectangular formation crimped in semi-circular formation adjacent the upper edge thereof to provide an exteriorly arranged flange 2 adapted to accommodate and provide a resting means for the lid 3, which has centrally secured thereto a ring 4 capable of swinging movement so that the same can be arranged to lie flat upon the lid when not in use or raised to operative position as suggested in Figure 3. It will be obvious that the ring 4 is adapted to be used as a handle for the lid which is formed at appropriate places at opposite sides of said handle with a plurality of openings 5 so that air can be admitted to the interior box as will be readily apparent. The walls of the box can also be formed with openings for the same purpose, as shown in Figure 2.

Adjacent the flange 2, the walls of the box are further crimped to provide an inwardly extending flange 6′ adapted to receive the tray 6 having centrally formed therein an opening 7 to provide a finger holding means for removing or replacing the tray on the flange 6′ within the box. Adjacent one longitudinal edge of the tray there is formed a substantial cross sectional V-shaped channel shaped receptacle 8 of appropriate depth to receive a hair comb, and adjacent the channel shaped receptacle 8 there is a depression 9 forming a receptacle adapted to receive a tooth brush and which is slightly enlarged as at 10 to accommodate the bristle portion of the tooth brush. Disposed in the tray opposite the comb receiving receptacle 8 is a tooth paste container receiving receptacle 11 and a soap receptacle 12 is also formed in the tray adjacent the tooth paste receptacle and the tooth brush receptacle 9.

From the above and disclosure as presented by the drawings it will be obvious that the toilet box is ideal for keeping toilet articles in sanitary condition.

It is thought from the foregoing description that the advantages and novel features of my invention will be readily apparent.

I desire it to be understood that I may make changes in the construction and in the combination and arrangement of the several parts, provided that such changes fall within the scope of the appended claim.

What I claim is:

A rectangular box having perforations in its wall and crimped adjacent the upper edge thereof to provide an outwardly extending flange, said box being further crimped adjacent the flange first mentioned to provide an interiorly extending flange, a tray adapted to rest upon the interior extending flange and formed with a channel shaped receptacle at one longitudinal edge thereof, said receptacle being adapted to receive a hair comb, and said tray being further formed with a tooth brush receptacle, a tooth paste retainer receptacle and a depression to receive a cake of soap and said tray being provided with a centrally disposed opening for the purpose specified.

In testimony whereof I affix my signature.

CHESTER E. KJETSAA.
