(54) Drying support for laundry drying device

(57) A drying support for a laundry drying device is disclosed, which drying support is a substantially quadrate foldable member with a certain thickness, and its longitudinal length S is less than or equal to the length in the axial direction of a drum of the laundry drying device; its minimum transverse length L_{min} after being folded is less than or equal to the inner diameter d of an entry opening on the laundry drying device, and its maximum transverse length L_{max} after being unfolded is less than or equal to the inner diameter D of the drum; when in use, the drying support is put inside the drum which stays still. When a user operates it, he or she directly puts the drying support inside the drum via the entry opening, unfolds the drying support, then lays the laundry to be dried above the drying support, and starts a drying program of the drying device, therefore the operation is very convenient.

CATEGORY OF CITED DOCUMENTS

X : particularly relevant if taken alone
Y : particularly relevant if combined with another document of the same category
A : technological background
O : non-written disclosure
P : intermediate document

T : theory or principle underlying the invention
E : earlier patent document, but published on, or after the filing date
D : document cited in the application
L : document cited for other reasons

& : member of the same patent family, corresponding document
