UNITED STATES PATENT OFFICE.

ALBERT J. MATTER, OF PORTLAND, OREGON.

STATIONARY-WASHBOWL CABINET.

954,121.

Specification of Letters Patent.

Patented Apr. 5, 1910.

Application filed August 20, 1909. Serial No. 513,854.

To all whom it may concern:

Be it known that I, ALBERT J. MATTER, a citizen of the United States, and residing at Portland, in the county of Multnomah and State of Oregon, have invented certain new and useful Improvements in Stationary-Washbowl Cabinets, of which the following is a specification.

This invention relates to improvements in cabinets or screens for stationary wash-bowls and has for its object to provide suitable means for hiding from view the stationary wash-bowls commonly used in offices.

Another object is to provide such a cabinet which has the appearance of some useful piece of furniture, and which may be easily and quickly opened so as to expose the wash-bowl for use.

I attain these objects by means of the improvements illustrated in the accompanying drawings, in which,

Figure 1 is an elevation showing cabinet open. Fig. 2 shows cabinet closed and appearing as a desk.

Like numerals of reference indicate similar parts throughout the several views.

Referring to the drawings, there is shown in Figs. 1 and 2 a standing-desk (to all outward appearance) having sides 2 and 13 and front 1 but no back. The top or cover 4 is attached by means of hinges 7 to cross-piece 11 which is rigidly attached to legs 3 and 12. In order that legs 3 and 12 may escape contact with base-board 9 and yet allow the cabinet to reach to the wall, extensions 8 are provided for the sides and may be of thinner material than the sides 2 and 13 so that they may be cut out to fit any

shaped chair rail or molding which may be attached to the wall. Part 5 which is provided with handles 17 and a groove 16 so as to appear as a drawer, is rigidly attached to top or cover 4. If desired a mirror may be provided as shown at 6. I prefer to make the cabinet somewhat wider than the wash-bowl so as to leave room between the wash-bowl and the sides of the cabinet for the reception of towels which can be hung on rod 14 or may be held there by any other suitable device.

It is understood that slight changes may be made in the specific structure shown without departing from the spirit of the invention.

What I claim is;

The combination with a stationary wash-bowl attached to the wall of a room, of a removable cabinet arranged to inclose said wash-bowl and comprising two sides and a front all rigidly connected, a cross-piece extending across the tops of the rear portions of the sides and rigidly connecting said sides, a cover hinged on said cross-piece, a depending-piece rigidly attached to said cover and arranged to meet the upper edge of the front when the cover is closed down, handles on said depending-piece, rungs attached to inside of aforesaid sides and a mirror attached to the inside of the aforesaid cover, all substantially as set forth.

In testimony whereof I affix my signature in presence of two witnesses.

ALBERT J. MATTER.
