(54) Title: METHOD FOR DIRECTLY INLINING VIRTUAL CALLS WITHOUT ON-STACK REPLACEMENT

(57) Abstract

A dynamic compiler determines whether to inline methods in place of virtual method calls by inspecting such calls' receiver expressions. If a given call site meets other criteria for inlining, the method is inlined if its receiver expression can be proved to have a property called "pre-existence". One kind of expression whose pre-existence is easily proved is a calling-procedure argument to which the body of the calling procedure makes no assignment. One of the other criteria is that the argument's static type is a class whose definition of the callee method has not been overridden, and the compiler employs a dependency data structure to record against both the caller and the callee that the caller contains code whose validity depends on the assumption that this criterion has been met. If the compiler thereafter compiles another implementation of the callee method, it inspects the dependency structures in which dependencies have been recorded against the callee method, and it recompiles the callers whose object code's validity is indicated by such structures to depend on that callee method's not having been overridden. The restriction of inlining to pre-existing receiver expression allows currently running invocations of the original compilation of the caller method to continue without fear of error.

<b>A. CLASSIFICATION OF SUBJECT MATTER</b> IPC 7 G06F9/44		
According to International Patent Classification (IPC) or to both national classification and IPC		
<b>B. FIELDS SEARCHED</b>		
Minimum documentation searched (classification system followed by classification symbols) IPC 7 G06F		
Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched		
Electronic data base consulted during the international search (name of data base and, where practical, search terms used)		
<b>C. DOCUMENTS CONSIDERED TO BE RELEVANT</b>		
Category	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
A	US 5 579 518 A (YASUMATSU KAZUKI) 26 November 1996 (1996-11-26)  column 2, line 45 -column 7, line 27 ---	1-7, 9-15, 17-23, 25-31, 33-39
A	CHAMBERS C ET AL: "An efficient implementation of SELF, a dynamically-typed object-oriented language based on prototypes" LISP AND SYMBOLIC COMPUTATION, JULY 1991, NETHERLANDS, vol. 4, no. 3, pages 243-281, XP000299230 ISSN: 0892-4635 page 63 -page 64, paragraph 6 --- -/--	8, 16, 24, 32, 40
<input checked="" type="checkbox"/> Further documents are listed in the continuation of box C.		
<input checked="" type="checkbox"/> Patent family members are listed in annex.		
° Special categories of cited documents :		
"A" document defining the general state of the art which is not considered to be of particular relevance "E" earlier document but published on or after the international filing date "L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified) "O" document referring to an oral disclosure, use, exhibition or other means "P" document published prior to the international filing date but later than the priority date claimed		
"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention "X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone "Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art. "&" document member of the same patent family
