(54) Title: SYSTEM AND METHOD FOR RECORDING NETWORK BASED VOICE AND VIDEO MEDIA

(57) Abstract: Users provide contact information to the system. The system uses the contact information to contact the user and collect a digital sample of the user's speech/voice. The digital sample is stored as the user's registered voice signature. Device identification and/or location information may be obtained from the user's device. This information may be cross-checked against external databases for corroboration. Discrepancies are noted in a report that can be used for investigative purposes. The system stores the device information, voice signature and user provided information in associated fashion. The voice signature is used to verify a subsequently provided voice sample when a user wishes to record a communications session. Access to recording functionality is allowed if the voice signatures match. Recording is initiated provided that consent to recording is provided by one or more parties to the communications session. The confirmation of consent is recorded and stored by the system.
