(54) Spreader particularly for depositing adhesives and/or polymeric materials in liquid dispersion

(57) A spreader (1), particularly for depositing adhesives and/or polymeric materials in a liquid dispersion, comprising a head (2), which can be associated or is associated with a footing and on which there is an active surface (3); the head has a profile that comprises a first convex region (4), which blends a second flat region (6), which belongs to the active surface, with a first wall (5)

of the head (2). The active surface further comprises a third concave region (7), which blends the second flat region (6) with a fourth flat region (8), which is arranged obliquely to the second flat region (6) and is part of the active surface. A duct (10) is further formed within the head (2) and is connected to a tank (22) by means of a first passage (11) and a second passage (18), and a feeder unit is provided between the tank and the duct.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 04 02 7743

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
