The ornamental design for endoscopic treatment device, as shown and described.

DESCRIPTION

FIG. 1 is a first perspective view of an endoscopic treatment device according to my new design; FIG. 2 is a front view thereof; FIG. 3 is a back view thereof; FIG. 4 is a plain view thereof; FIG. 5 is a base view thereof; FIG. 6 is a left side view thereof; FIG. 7 is a right side view thereof; FIG. 8 is a second perspective view thereof; and FIG. 9 is a reference drawing showing a state of use thereof. The present article is attached to a distal portion of a tube of an endoscopic treatment system to be opened and closed in a scissor-like motion as shown in the perspective view, FIG. 8. The present article constitutes the distal portion of the endoscopic treatment system and is inserted to the target lesion through the forceps channel of the endoscope for grasping the target lesion by scissor-like motion and excising the same by applying high-frequency current. Broken lines shown in the drawings illustrate portions of the endoscopic treatment device and form no part of the claimed design.
