Abstract: The present invention relates to fluorinated benzofuranyl-pyrimidine derivatives containing a sulfone group (I) as described and defined herein, and methods for their preparation, their use for the treatment and/or prophylaxis of disorders, in particular of hyperproliferative disorders and/or virally induced infectious diseases and/or of cardiovascular diseases. The invention further relates to intermediate compounds useful in the preparation of said compounds of general formula (I). R² represents the group (a).

(I)

(a)
 Declarations under Rule 4.17:

— as to applicant’s entitlement to apply for and be granted a patent (Rule 4.17(H))
Fluorinated benzofuranyl-pyrimidine derivatives containing a sulfone group

The present invention relates to fluorinated benzofuranyl-pyrimidine derivatives containing a sulfone group of general formula (I) as described and defined herein, and methods for their preparation, their use for the treatment and/or prophylaxis of disorders, in particular of hyper-proliferative disorders and/or virally induced infectious diseases and/or of cardiovascular diseases. The invention further relates to intermediate compounds useful in the preparation of said compounds of general formula (I).

The family of cyclin-dependent kinase (CDK) proteins consists of members that are key regulators of the cell division cycle (cell cycle CDK’s), that are involved in regulation of gene transcription (transcriptional CDK’s), and of members with other functions. CDKs require for activation the association with a regulatory cyclin subunit. The cell cycle CDKs CDK1/cyclin B, CDK2/cyclin A, CDK2/cyclinE, CDK4/cyclinD, and CDK6/cyclinD get activated in a sequential order to drive a cell into and through the cell division cycle. The transcriptional CDKs CDK9/cyclin T and CDK7/cyclin H regulate the activity of RNA polymerase II via phosphorylation of the carboxy-terminal domain (CTD). Positive transcription factor b (P-TEFb) is a heterodimer of CDK9 and one of four cyclin partners, cyclin T1, cyclin K, cyclin T2a or T2b.

Whereas CDK9 (NCBI GenBank Gene ID 1025) is exclusively involved in transcriptional regulation, CDK7 in addition participates in cell cycle regulation as CDK-activating kinase (CAK).

Transcription of genes by RNA polymerase II is initiated by assembly of the pre-initiation complex at the promoter region and phosphorylation of Ser 5 and Ser 7 of the CTD by CDK7/cyclin H. For a major fraction of genes RNA polymerase II stops mRNA transcription after it moved 20-40 nucleotides along the DNA template. This promoter-proximal pausing of RNA polymerase II is mediated by negative elongation factors and is recognized as a major control mechanism to regulate expression of rapidly induced genes in response to a variety of stimuli (Cho et al., Cell Cycle 9, 1697, 2010). P-TEFb is crucially involved in overcoming promoter-proximal pausing of RNA polymerase II and transition into a productive elongation state by phosphorylation of Ser 2 of the CTD as well as by phosphorylation and inactivation of negative elongation factors.

Activity of P-TEFb itself is regulated by several mechanisms. About half of cellular P-TEFb exists in an inactive complex with 7SK small nuclear RNA (7SK snRNA), La-related protein 7 (LARP7/PIP7S) and hexamethylene bis-acetamide inducible proteins 1/2 (HEXIM1/2, He et al., Mol Cell 29, 588, 2008). The remaining half of P-TEFb exists in an active complex containing the bromodomain protein Brd4 (Yang et al., Mol Cell 19, 535, 2005). Brd4 recruits P-TEFb through interaction with acetylated histones to chromatin areas primed for gene transcription. Through alternately interacting with its positive and negative regulators, P-TEFb is maintained in a functional equilibrium: P-TEFb bound to the 7SK snRNA...
complex represents a reservoir from which active P-TEFb can be released on demand of cellular transcription and cell proliferation (Zhou & Yik, Microbiol Mol Biol Rev 70, 646, 2006). Furthermore, the activity of P-TEFb is regulated by posttranslational modifications including phosphorylation/dephosphorylation, ubiquitination, and acetylation (reviewed in Cho et al., Cell Cycle 9, 1697, 2010).

Deregulated activity of CDK9 kinase activity of the P-TEFb heterodimer is associated with a variety of human pathological settings such as hyper-proliferative diseases (e.g. cancer), virally induced infectious diseases or cardiovascular diseases:

Cancer is regarded as a hyper-proliferative disorder mediated by a disbalance of proliferation and cell death (apoptosis). High levels of anti-apoptotic Bcl-2-family proteins are found in various human tumors and account for prolonged survival of tumor cells and therapy resistance. Inhibition of P-TEFb kinase activity was shown to reduce transcriptional activity of RNA polymerase II leading to a decline of short-lived anti-apoptotic proteins, especially Mcl-1 and XIAP, reinstalling the ability of tumor cells to undergo apoptosis. A number of other proteins associated with the transformed tumor phenotype (such as Myc, NF-kB responsive gene transcripts, mitotic kinases) are either short-lived proteins or are encoded by short-lived transcripts which are sensitive to reduced RNA polymerase II activity mediated by P-TEFb inhibition (reviewed in Wang & Fischer, Trends Pharmacol Sci 29, 302, 2008).

Many viruses rely on the transcriptional machinery of the host cell for the transcription of their own genome. In case of HIV-1, RNA polymerase II gets recruited to the promoter region within the viral LTR's. The viral transcription activator (Tat) protein binds to nascent viral transcripts and overcomes promoter-proximal RNA polymerase II pausing by recruitment of P-TEFb which in turn promotes transcriptional elongation. Furthermore, the Tat protein increases the fraction of active P-TEFb by replacement of the P-TEFb inhibitory proteins HEXIM1/2 within the 7SK snRNA complex. Recent data have shown that inhibition of the kinase activity of P-TEFb is sufficient to block HIV-1 replication at kinase inhibitor concentrations that are not cytotoxic to the host cells (reviewed in Wang & Fischer, Trends Pharmacol Sci 29, 302, 2008). Similarly, recruitment of P-TEFb by viral proteins has been reported for other viruses such as B-cell cancer-associated Epstein-Barr virus, where the nuclear antigen EBNA2 protein interacts with P-TEFb (Bark-Jones et al., Oncogene, 25, 1775, 2006), and the human lymphotropic virus type 1 (HTLV-1), where the transcriptional activator Tax recruits P-TEFb (Zhou et al., J Virol. 80, 4781, 2006).

Cardiac hypertrophy, the heart's adaptive response to mechanical overload and pressure (hemodynamic stress e.g. hypertension, myocardial infarction), can lead, on a long term, to heart failure and death. Cardiac hypertrophy was shown to be associated with increased transcriptional activity and RNA polymerase II CTD phosphorylation in cardiac muscle cells. P-TEFb was found to be activated by
dissociation from the inactive 7SK snRNA/HEXIM1/2 complex. These findings suggest pharmacological inhibition of P-TEFb kinase activity as a therapeutic approach to treat cardiac hypertrophy (reviewed in Dey et al., Cell Cycle 6, 1856, 2007).

In summary, multiple lines of evidence suggest that selective inhibition of the CDK9 kinase activity of the P-TEFb heterodimer (= CDK9 and one of four cyclin partners, cyclin T1, cyclin K, cyclin T2a or T2b) represents an innovative approach for the treatment of diseases such as cancer, viral diseases, and/or diseases of the heart. CDK9 belongs to a family of at least 13 closely related kinases of which the subgroup of the cell cycle CDK's fulfills multiple roles in regulation of cell proliferation. Thus, co-inhibition of cell cycle CDKs (e.g. CDK1/cyclin B, CDK2/cyclin A, CDK2/cyclinE, CDK4/cyclinD, CDK6/cyclinD) and of CDK9, is expected to impact normal proliferating tissues such as intestinal mucosa, lymphatic and hematopoietic organs, and reproductive organs. To maximize the therapeutic margin of CDK9 kinase inhibitors, molecules with high selectivity towards CDK9 are required.

CDK inhibitors in general as well as CDK9 inhibitors are described in a number of different publications: WO2008129070 and WO2008129071 both describe 2,4 disubstituted aminopyrimidines as CDK inhibitors in general. It is also asserted that some of these compounds may act as selective CDK9 inhibitors (WO2008 129070) and as CDK5 inhibitors (WO2008 129071), respectively, but no specific CDK9 IC50 (WO2008 129070) or CDK5 IC50 (WO2008129071) data is presented. These compounds do not contain a fluoro atom in 5-position of the pyrimidine core.

WO2008129080 discloses 4,6 disubstituted aminopyrimidines and demonstrates that these compounds show an inhibitory effect on the protein kinase activity of various protein kinases, such as CDK1, CDK2, CDK4, CDK5, CDK6 and CDK9, with a preference for CDK9 inhibition (example 80).

WO2005026129 discloses 4,6 disubstituted aminopyrimidines and demonstrates that these compounds show an inhibitory effect on the protein kinase activity of various protein kinases, in particular CDK2, CDK4, and CDK9.

WO 2009118567 discloses pyrimidine and [1,3,5]triazine derivatives as protein kinase inhibitors, in particular CDK2, CDK7 and CDK9.

WO201 1116951 discloses substituted triazine derivatives as selective CDK9 inhibitors.
WO20121 17048 discloses disubstituted triazine derivatives as selective CDK9 inhibitors.
WO20121 17059 discloses disubstituted pyridine derivatives as selective CDK9 inhibitors.
WO2012143399 discloses substituted 4-aryl-N-phenyl-1,3,5-triazin-2-amines as selective CDK9 inhibitors.
EP1218360 Bl, which corresponds to US20041 16388 Al, US7074789B2 and WO2001025220A1, describes triazine derivatives as kinase inhibitors, but does not disclose potent or selective CDK9 inhibitors.

WO2008079933 discloses aminopyridine and aminopyrimidine derivatives and their use as CDK1, CDK2, CDK3, CDK4, CDK5, CDK6, CDK7, CDK8 or CDK9 inhibitors.

WO201 1012661 describes aminopyridine derivatives useful as CDK inhibitors.

WO201 1026917 discloses carboxamides derived from substituted 4-phenylpyridine-2-amines as inhibitors of CDK9.

WO2012066065 discloses phenyl-heteroaryl amines as inhibitors of CDK9. A selectivity towards CDK9 over other CDK isoforms is preferred, however disclosure of CDK-inhibition data is confined to CDK 9. No bicyclic ring systems are disclosed attached to the C4 position of the pyrimidine core. Within the group attached to C4 of the pyrimidine core, alkoxy phenyls can be regarded as encompassed, but there is no suggestion for a specific substitution pattern characterised by a fluoro atom attached to C5 of the pyrimidine ring, and an aniline at C2 of the pyrimidine, featuring a substituted sulfanyl-methylene group in meta position. Compounds shown in the examples typically feature a substituted cycloalkyl group as R1 but no phenyl.

WO2012066070 discloses 3-(aminoaryl)-pyridine compounds as inhibitors of CDK9. The biaryl core mandatorily consists of two heteroaromatic rings.

WO2012101062 discloses substituted bi-heteroaryl compounds featuring a 2-aminopyridine core as inhibitors of CDK9. The biaryl core mandatorily consists of two heteroaromatic rings.

WO2012101063 discloses carboxamides derived from substituted 4-(heteroaryl)-pyridine-2-amines as inhibitors of CDK9.

WO 2012101064 discloses N-acyl pyrimidine biaryl compounds as inhibitors of CDK9.

WO 2012101065 discloses pyrimidine biaryl compounds as inhibitors of CDK9. The biaryl core mandatorily consists of two heteroaromatic rings.

WO 2012101066 discloses pyrimidine biaryl compounds as inhibitors of CDK9. Substitution R1 of the amino group attached to the heteroaromatic core is confined to non-aromatic groups but does not cover substituted phenyls. Furthermore, the biaryl core mandatorily consists of two heteroaromatic rings.
Wang et al. (Chemistry & Biology 17, 1111-1121, 2010) describe 2-anilino-4-(thiazol-5-yl)pyrimidine transcriptional CDK inhibitors, which show anticancer activity in animal models.

WO 2011077171 discloses 4,6-disubstituted aminopyrimidine derivatives as inhibitors of CDK9.

WO 2014031937 discloses 4,6-disubstituted aminopyrimidine derivatives as inhibitors of CDK9.

WO 2013037896 discloses disubstituted 5-fluoropyrimidines as selective inhibitors of CDK9.

WO 2013037894 discloses disubstituted 5-fluoropyrimidine derivatives containing a sulfoximine group as selective inhibitors of CDK9.

WO 2014060376 discloses substituted 4-(ortho)-fluorophenyl-5-fluoropyrimidin-2-yl amine derivatives containing a sulfone group as selective inhibitors of CDK9.

WO 2014060375 discloses substituted 5-fluoro-N-(pyridin-2-yl)pyridin-2-amine derivatives containing a sulfone group as selective inhibitors of CDK9.

WO 2014060493 discloses substituted N-(pyridin-2-yl)pyrimidin-4-amine derivatives containing a sulfone group as selective inhibitors of CDK9.

WO 2014076028 discloses substituted 4-(ortho)-fluorophenyl-5-fluoropyrimidin-2-yl amine derivatives containing a sulfoximine group as selective inhibitors of CDK9.

WO 2014076091 discloses substituted 5-fluoro-N-(pyridin-2-yl)pyridin-2-amine derivatives containing a sulfoximine group as selective inhibitors of CDK9.

WO 2014076111 discloses substituted N-(pyridin-2-yl)pyrimidin-4-amine derivatives containing a sulfoximine group as selective inhibitors of CDK9.

WO 2015001021 discloses 5-fluoro-N-(pyridin-2-yl)pyridin-2-amine derivatives containing a sulfoximine group as selective inhibitors of CDK9.

WO2004009562 discloses substituted triazine kinase inhibitors. For selected compounds CDK1 and CDK4 test data, but no CDK9 data is presented.
WO2004072063 describes heteroaryl (pyrimidine, triazine) substituted pyrroles as inhibitors of protein kinases such as ERK2, GSK3, PKA or CDK2.

WO201009155 discloses triazine and pyrimidine derivatives as inhibitors of histone deacetylase and/or cyclin dependent kinases (CDKs). For selected compounds CDK2 test data is described.

WO2003037346 (corresponding to US7618968B2, US7291616B2, US2008064700A1, US2003153570A1) relates to aryl triazines and uses thereof, including to inhibit lysophosphatidic acid acyltransferase beta (LPAAT-beta) activity and/or proliferation of cells such as tumor cells.

WO2005037800 discloses sulfoximine substituted anilino-pyrimidines as inhibitors of VEGFR and CDK kinases, in particular VEGFR2, CDK1 and CDK2, having no aromatic ring directly bonded to the pyrimidine ring and having the sulfoximine group directly bonded to the aniline group. No CDK9 data are disclosed.

WO20080537800 describes sulfoximine substituted anilino-pyrimidines as inhibitors of VEGFR and CDK kinases, in particular VEGFR2, CDK1 and CDK2, having no aromatic ring directly bonded to the pyrimidine ring and having the sulfoximine group directly bonded to the aniline group. No CDK9 data are disclosed.

WO2008025556 describes carbamoyl sulfoximides having a pyrimidine core, which are useful as kinase inhibitors. No CDK9 data is presented. No molecules are exemplified, which possess a fluoropyrimidine core.

WO2002066481 describes pyrimidine derivatives as cyclin dependent kinase inhibitors. CDK9 is not mentioned and no CDK9 data is presented.

WO2008109943 concerns phenyl aminopyrimidine compounds and their use as kinase inhibitors, in particular as JAK2 kinase inhibitors. The specific examples mainly focus on compounds having a pyrimidine core.

WO2009032861 describes substituted pyrimidinyl amines as JNK kinase inhibitors. The specific examples mainly focus on compounds having a pyrimidine core.

WO2010142329 concerns amino-pyrimidine compounds as inhibitors of TBK1 and/or IKK epsilon. The specific examples mainly focus on compounds having a pyrimidine core.

WO2012139499 discloses urea substituted anilino-pyrimidines as inhibitors of various protein kinases.

WO2014106762 discloses 4-pyrimidinylamino-benzensulfonamide derivatives, differing from the compounds of the present invention inter alia through the sulfonamido moiety attached to the aniline portion, as inhibitors of polo-like kinase-1.
Despite the fact that various inhibitors of CDKs are known, there remains a need for selective CDK9 inhibitors to be used for the treatment of diseases such as hyper-proliferative diseases, viral diseases, and/or diseases of the heart, which offer one or more advantages over the compounds known from prior art, such as:

- improved activity and/or efficacy
- beneficial kinase selectivity profile according to the respective therapeutic need
- improved side effect profile, such as fewer undesired side effects, lower intensity of side effects, or reduced (cyto)toxicity
- improved physicochemical properties, such as solubility in water and body fluids
- improved pharmacokinetic properties, allowing e.g. for dose reduction or an easier dosing scheme
- easier drug substance manufacturing e.g. by shorter synthetic routes or easier purification.

A particular object of the invention is to provide CDK9 kinase inhibitors which, compared to the compounds known from prior art, show an increased selectivity for CDK9/Cyclin T1 as compared to CDK2/Cyclin E, preferably at high ATP concentrations, e.g. as determined using Method lb. "CDK9/CycT1 high ATP kinase assay" and Method 2b. "CDK2/CycE high ATP assay", infra.

Another object of the invention is to provide CDK9 kinase inhibitors which show an increased potency to inhibit CDK9 activity (demonstrated by a lower IC50 value for CDK9/Cyclin T1) compared to the compounds known from prior art.

Another object of the invention is to provide CDK9 kinase inhibitors which show an increased potency to inhibit CDK9 activity at high ATP concentrations compared to the compounds known from prior art.

Another particular object of the invention is to provide CDK9 kinase inhibitors, which show an improved anti-proliferative activity in tumor cell lines such as HeLa, HeLa-MaTu-ADR, NCI-H460, DU145, Caco-2, B16F10, A2780 or MOLM-13, compared to the compounds known from prior art.

Further, it is also an object of the present invention to provide CDK9 kinase inhibitors, which, compared to the compounds known from prior art, are highly selective for CDK9/Cyclin T1 as compared to CDK2/Cyclin E, preferably at high ATP concentrations, and/or which show an increased potency to inhibit CDK9 activity and/or which show an improved anti-proliferative activity in tumor cell lines such as HeLa, HeLa-MaTu-ADR, NCI-H460, DU145, Caco-2, B16F10, A2780 or MOLM-13, and/or which show an increased potency to inhibit CDK9 activity at high ATP concentrations compared to the compounds known from prior art.
The present invention relates to compounds of general formula (I)

![Formula Image]

wherein

- $R^1$ represents a group selected from Ci-C6-alkyl-, C$_3$-C$_7$-cycloalkyl-, heterocyclyl-, phenyl-, heteroaryl-, phenyl-Ci-C3-alkyl- and heteroaryl-Ci-C3-alkyl-,
- wherein said group is optionally substituted with one or two or three substituents, identically or differently, selected from the group of hydroxy, cyano, halogen, halo-Ci-C3-alkyl-, Ci-C6-alkoxy-, Ci-C3-fluoroalkoxy-, -Nth, alkylamino-, dialkylamino-, acetylamino-, N-methyl-N-acetylamino-, cyclic amines, -OP(0)(OH)$_2$, -C(0)OH, -C(0)NH$_2$;

- $R^2$ represents the group

![Group Image]

- $R^3, R^4$ represent, independently from each other, a group selected from a hydrogen atom, fluoro atom, chloro atom, bromo atom, cyano, -$SF_5$, Ci-C3-alkyl-, Ci-C3-alkoxy-, halo-Ci-C3-alkyl-, Ci-C3-fluoroalkoxy-;
- $R^5, R^6$ represent, independently from each other, a group selected from a hydrogen atom, fluoro atom, chloro atom, bromo atom, cyano, Ci-C3-alkyl-, Ci-C3-alkoxy-, halo-Ci-C3-alkyl-, C$_1$-C$_3$-fluoroalkoxy-;
- $R^5, R^7$ represent, independently from each other, a group selected from a hydrogen atom, fluoro atom, chloro atom, Ci-C3-alkyl-, Ci-C3-alkoxy-, halo-Ci-C3-alkyl-, Ci-C3-fluoroalkoxy-;

and the salts, solvates or salts of solvates thereof.
Compounds according to the invention are the compounds of the formula (I) and the salts, solvates and solvates of the salts thereof, the compounds of the hereinafter recited formula which are encompassed by formula (I) and the salts, solvates and solvates of the salts thereof, and the compounds which are encompassed by formula (I) and are mentioned hereinafter as exemplary embodiments and the salts, solvates and solvates of the salts thereof, where the compounds which are encompassed by formula (I) and are mentioned hereinafter are not already salts, solvates and solvates of the salts.

The compounds according to the invention may, depending on their structure, exist in stereoisomeric forms (enantiomers, diastereomers). The invention therefore relates to the enantiomers or diastereomers and respective mixtures thereof. The stereoisomerically pure constituents can be isolated in a known manner from such mixtures of enantiomers and/or diastereomers.

If the compounds according to the invention can be in tautomeric forms, the present invention encompasses all tautomeric forms.

Further, the compounds of the present invention can exist in free form, e.g. as a free base, or as a free acid, or as a zwitterion, or can exist in the form of a salt. Said salt may be any salt, either an organic or inorganic addition salt, particularly any physiologically acceptable organic or inorganic addition salt, customarily used in pharmacy.

Salts which are preferred for the purposes of the present invention are physiologically acceptable salts of the compounds according to the invention. However, salts which are not suitable for pharmaceutical applications per se, but which, for example, can be used for the isolation or purification of the compounds according to the invention, are also comprised.

The term "physiologically acceptable salt" refers to a relatively non-toxic, inorganic or organic acid addition salt of a compound of the present invention, for example, see S. M. Berge, et al. "Pharmaceutical Salts," J. Pharm. Sci. 1977, 66, 1-19.

Physiologically acceptable salts of the compounds according to the invention encompass acid addition salts of mineral acids, carboxylic acids and sulfonic acids, for example salts of hydrochloric acid, hydrobromic acid, hydroiodic, sulfuric acid, bisulfuric acid, phosphoric acid, nitric acid or with an organic acid, such as formic, acetic, acetoacetic, pyruvic, trifluoroacetic, propionic, butyric, hexanoic, heptanoic, undecanoic, lauric, benzoic, salicylic, 2-(4-hydroxybenzoyl)-benzoic, camphoric, cinnamic, cyclopentanepropionic, digluconic, 3-hydroxy-2-naphthoic, nicotinic, pamoic, pectinic, persulfuric, 3-phenylpropionic, picric, pivalic, 2-hydroxyethanesulfonate, itaconic, sulfamic, trifluoromethanesulfonic, dodecylsulfuric, ethansulfonic, benzenesulfonic, para-toluenesulfonic, methanesulfonic, 2-naphthalenesulfonic, naphthalenedisulfonic, camphorsulfonic acid, citric, tartaric, stearic, oxalic, malonic, succinic, malic,
adipic, alginic, maleic, fumaric, D-gluconic, mandelic, ascorbic, glucoheptanoic, glycerophosphoric, aspartic, sulfosalicylic, hemisulfuric, or thiocyanic acid, for example.

Physiologically acceptable salts of the compounds according to the invention also comprise salts of conventional bases, such as, by way of example and by preference, alkali metal salts (for example sodium and potassium salts), alkaline earth metal salts (for example calcium and magnesium salts) and ammonium salts derived from ammonia or organic amines with 1 to 16 C atoms, such as, by way of example and by preference, ethylamine, diethylamine, triethylamine, ethyldiisopropylamine, monoethanolamine, diethanolamine, triethanolamine, dimethylaminoethanol, procaine, dibenzylamine, /V-methyImorpholine, arginine, lysine, ethylenediamine, /V-methylpiperidine, N-methylglucamine, dimethylglucamine, ethylglucamine, 1,6-hexadiamine, glucosamine, sarcosine, serinol, tris(hydroxymethyl)aminomethane, aminopropanediol, Sovak base, and 1-amino-2,3,4-butanetriol. Additionally, the compounds according to the invention may form salts with a quaternary ammonium ion obtainable e.g. by quarternisation of a basic nitrogen containing group with agents such as lower alkylhalides such as methyl-, ethyl-, propyl-, and butylchlorides, -bromides and -iodides; dialkylsulfates such as dimethyl-, diethyl-, dibutyl- and diamylsulfates, long chain halides such as decyl-, lauryl-, myristyl- and stearylchlorides, -bromides and -iodides, aralkylhalides such as benzyl- and phenethylbromides and others. Examples of suitable quarternary ammonium ions are tetramethylammonium, tetraethylammonium, tetra(α-propyl)ammonium, tetra (n-butyl)ammonium, or N-benzyl-N,N,N,N-trimethylammonium.

The present invention includes all possible salts of the compounds of the present invention as single salts, or as any mixture of said salts, in any ratio.

Solvates are the term used for the purposes of the invention for those forms of the compounds according to the invention which form a complex with solvent molecules by coordination in the solid or liquid state. Hydrates are a special form of solvates in which the coordination takes place with water. Hydrates are preferred as solvates within the scope of the present invention.

The invention also includes all suitable isotopic variations of a compound of the invention. An isotopic variation of a compound of the invention is defined as one in which at least one atom is replaced by an atom having the same atomic number but an atomic mass different from the atomic mass usually or predominantly found in nature. Examples of isotopes that can be incorporated into a compound of the invention include isotopes of hydrogen, carbon, nitrogen, oxygen, phosphorus, sulfur, fluorine, chlorine, bromine and iodine, such as ²H (deuterium), ³H (tritium), ¹³C, ¹⁴C, ¹⁵N, ¹⁷O, ¹⁸O, ³²P, ³³P, ³⁵S, ³⁴S, ³⁶S, ³⁸F, ³⁷Cl, ¹²²Br, ¹²³I, ¹²⁴I, ¹²⁷I and ¹³¹I, respectively. Certain isotopic variations of a compound of the invention, for example, those in which one or more radioactive isotopes such as ³H or ¹⁴C are
incorporated, are useful in drug and/or substrate tissue distribution studies. Tritiated and carbon-14, i.e., $^{13}$C, isotopes are particularly preferred for their ease of preparation and detectability. Further, substitution with isotopes such as deuterium may afford certain therapeutic advantages resulting from greater metabolic stability, for example, increased in vivo half-life or reduced dosage requirements and hence may be preferred in some circumstances. Isotopic variations of a compound of the invention can generally be prepared by conventional procedures known by a person skilled in the art such as by the illustrative methods or by the preparations described in the examples hereafter using appropriate isotopic variations of suitable reagents.

In addition, the present invention also encompasses prodrugs of the compounds according to the invention. The term "prodrugs" encompasses compounds which themselves may be biologically active or inactive, but are converted (for example by metabolism or hydrolysis) to compounds according to the invention during their residence time in the body.

Furthermore, the present invention includes all possible crystalline forms, or polymorphs, of the compounds of the present invention, either as single polymorphs, or as a mixture of more than one polymorphs, in any ratio.

Accordingly, the present invention includes all possible salts, polymorphs, metabolites, hydrates, solvates, prodrugs (e.g. esters) thereof, and diastereoisomeric forms of the compounds of the present invention as single salt, polymorph, metabolite, hydrate, solvate, prodrug (e.g. esters) thereof, or diastereoisomeric form, or as mixture of more than one salt, polymorph, metabolite, hydrate, solvate, prodrug (e.g. esters) thereof, or diastereoisomeric form in any ratio.

For the purposes of the present invention, the substituents have the following meaning, unless otherwise specified:

The term "halogen atom" or "halo" represents fluorine, chlorine, bromine and iodine, particularly chlorine or fluorine, preferably fluorine.

The term "alkyl-" represents a linear or branched alkyl radical having the number of carbon atoms specifically indicated, e.g. C1-C10 one, two, three, four, five, six, seven, eight, nine or ten carbon atoms, e.g. methyl-, ethyl-, n-propyl-, isopropyl-, n-butyl-, isobutyl-, sec-butyl-, terti-butyl-, pentyl-, isopentyl-, hexyl-, heptyl-, octyl-, nonyl-, decyl-, 2-methylbutyl-, 1-methylbutyl-, 1-ethylpropyl-, 1,2-dimethylpropyl-, neo-pentyl-, 1,1-dimethylpropyl-, 4-methylpentyl-, 3-methylpentyl-, 2-methylpentyl-, 1-methylpentyl-, 2-ethylbutyl-, 1-ethylbutyl-, 3,3-dimethylbutyl-, 2,2-dimethylbutyl-, 1,1-dimethylbutyl-, 2,3-dimethylbutyl-, 1,3-dimethylbutyl-, or 1,2-dimethylbutyl-. If the number of carbon
atoms is not specifically indicated the term "alkyl-" represents a linear or branched alkyl radical having, as a rule, 1 to 9, particularly 1 to 6, preferably 1 to 4 carbon atoms. Particularly, the alkyl group has 1, 2, 3, 4, 5 or 6 carbon atoms ("C1-C6-alkyl-"), e.g. methyl-, ethyl-, n-propyl-, isopropyl-, n-butyl-, ieri-butyl-, penty1-, isopentyl-, hexyl-, 2-methylbutyl-, 1-methylbutyl-, 1-ethylpropyl-, 1,2-dimethylpropyl-, neo-pentyl-, 1,1-dimethylpropyl-, 4-methylpentyl-, 3-methylpentyl-, 2-methylpentyl-, 1-methylpentyl-, 2-ethylbutyl-, 1-ethylbutyl-, 3,3-dimethylbutyl-, 2,2-dimethylbutyl-, 1,1-dimethylbutyl-, 2,3-dimethylbutyl-, 1,3-dimethylbutyl-, or 1,2-dimethylbutyl-.

Preferably, the alkyl group has 1, 2 or 3 carbon atoms ("C1-C3-alkyl-"), methyl-, ethyl-, n-propyl- or isopropyl-.

The term "C3-C7-cycloalkyl-" is to be understood as preferably meaning a saturated or partially unsaturated, monovalent, monocyclic hydrocarbon ring which contains 3, 4, 5, 6 or 7 carbon atoms. Said C3-C7-cycloalkyl- group is for example, a monocyclic hydrocarbon ring, e.g. a cyclopropyl-, cyclobutyl-, cyclopentyl-, cyclohexyl- or cycloheptyl- group. Said cycloalkyl- ring is non-aromatic but can optionally contain one or more double bonds e.g. cycloalkenyl-, such as a cyclopropenyl-, cyclobutenyl-, cyclopropenyl-, cyclohexenyl- or cycloheptenyl- group, wherein the bond between said ring with the rest of the molecule may be to any carbon atom of said ring, be it saturated or unsaturated. Particularly, said cycloalkyl- group is a C3-C7-cycloalkyl-, a Cs-Cs-cycloalkyl- or a cyclohexyl- group.

The term "Cs-Cs-cycloalkyl-" is to be understood as preferably meaning a saturated, monovalent, monocyclic hydrocarbon ring which contains 3, 4 or 5 carbon atoms. In particular said Cs-Cs-cycloalkyl-group is a monocyclic hydrocarbon ring such as a cyclopropyl-, cyclobutyl- or cyclopentyl- group. Preferably said "Cs-Cs-cycloalkyl-" group is a cyclopropyl- group.

The term "C3-C6-cycloalkyl-" is to be understood as preferably meaning a saturated, monovalent, monocyclic hydrocarbon ring which contains 3, 4, 5 or 6 carbon atoms. In particular said C3-C5-cycloalkyl- group is a monocyclic hydrocarbon ring such as a cyclopropyl-, cyclobutyl-, cyclopentyl- or cyclohexyl- group.

The term "heterocyclyl-" is to be understood as meaning a saturated or partially unsaturated, monovalent, mono- or bicyclic hydrocarbon ring which contains 3, 4, 5, 6, 7, 8 or 9 carbon atoms and further containing 1, 2 or 3 heteroatom-containing groups selected from oxygen, sulfur, nitrogen. Particularly, the term "heterocyclyl-" is to be understood as meaning a "4- to 10-membered heterocyclic ring".

The term "a 4- to 10-membered heterocyclic ring" is to be understood as meaning a saturated or partially unsaturated, monovalent, mono- or bicyclic hydrocarbon ring which contains 3, 4, 5, 6, 7, 8 or 9 carbon atoms, and further containing 1, 2 or 3 heteroatom-containing groups selected from oxygen, sulfur,
nitrogen. A C₃-C₉-heterocyclyl- is to be understood as meaning a heterocyclyl- which contains 3, 4, 5, 6, 7, 8 or 9 carbon atoms and additionally at least one heteroatom as ring atoms. Accordingly in case of one heteroatom the ring is 4- to 10-membered, in case of two heteroatoms the ring is 5- to 11-membered and in case of three heteroatoms the ring is 6- to 12-membered.

Said heterocyclic ring is for example, a monocyclic heterocyclic ring such as an oxetanyl-, azetidinyl-, tetrahydrofuranyl-, pyrrolidinyl-, 1,3-dioxolanyl-, imidazolidinyl-, pyrazolidinyl-, oxazolidinyl-, isoxazolidinyl-, 1,4-dioxanyl-, pyrrolyl-, tetrahydropyranyl-, piperidinyl-, morpholinyl-, 1,3-dithianyl-, thiomorpholinyl-, piperazinyl-, or chinuclidinyl- group. Optionally, said heterocyclic ring can contain one or more double bonds, e.g. 4i7-pyranyl-, 2i7-pyranyl-, 2,5-dihydro-li7-pyrrolyl-, 1,3-dioxolyl-, 4i7-1,3,4-fhiadiazinyl-, 2,5-dihydrofuranyl-, 2,3-dihydrofuranyl-, 2,5-dihydrothienyl-, 2,3-dihydrobenzyl-, 4,5-dihydrooxazolyl-, 4,5-dihydroisoxazolyl-, or 4/M,4-fhiazinyl- group, or, it may be benzo fused.

Particularly, a C₃-C₇-heterocyclyl- is to be understood as meaning a heterocyclyl- which contains 3, 4, 5, 6, or 7 carbon atoms and additionally at least one heteroatom as ring atoms. Accordingly, in case of one heteroatom the ring is 4- to 8-membered, in case of two heteroatoms the ring is 5- to 9-membered and in case of three heteroatoms the ring is 6- to 10-membered.

Particularly, a C₃-C₆-heterocyclyl- is to be understood as meaning a heterocyclyl- which contains 3, 4, 5 or 6 carbon atoms and additionally at least one heteroatom as ring atoms. Accordingly, in case of one heteroatom the ring is 4- to 7-membered, in case of two heteroatoms the ring is 5- to 8-membered and in case of three heteroatoms the ring is 6- to 9-membered.

Particularly, the term "heterocyclyl-" is to be understood as being a heterocyclic ring which contains 3, 4 or 5 carbon atoms, and 1, 2 or 3 of the above-mentioned heteroatom-containing groups (a "4- to 7-membered heterocyclic ring"), more particularly said ring can contain 4 or 5 carbon atoms, and 1, 2 or 3 of the above-mentioned heteroatom-containing groups (a "5- to 7-membered heterocyclic ring"), more particularly said heterocyclic ring is a "6-membered heterocyclic ring", which is to be understood as containing 4 carbon atoms and 2 of the above-mentioned heteroatom-containing groups or 5 carbon atoms and one of the above-mentioned heteroatom-containing groups, preferably 4 carbon atoms and 2 of the above-mentioned heteroatom-containing groups.

The term "Ci-C6-alkoxy-" is to be understood as preferably meaning a linear or branched, saturated, monovalent, hydrocarbon group of formula -O-alkyl, in which the term "alkyl" is defined supra, e.g. a methoxy-, ethoxy-, n-propoxy-, wo-propoxy-, n-butoxy-, wo-butoxy-, feri-butoxy-, sec-butoxy-, pentyloxy-, wo-pentyloxy-, n-hexyloxy- group, or an isomer thereof. Particularly, the "Ci-C6-alkoxy-"
group is a "Ci-C\textsubscript{2}-alkoxy-", a "Ci-C\textsubscript{3}-alkoxy-", a methoxy-, ethoxy-, or propoxy- group, preferably a methoxy-, ethoxy- or propoxy- group. Further preferred is a "Ci-C\textsubscript{2}-alkoxy-" group, particularly a methoxy- or ethoxy- group.

The term "Ci-C\textsubscript{2}-fluoroalkoxy-" is to be understood as preferably meaning a linear or branched, saturated, monovalent, Ci-C\textsubscript{3}-alkoxy- group, as defined supra, in which one or more of the hydrogen atoms is replaced, identically or differently, by one or more fluoro atoms. Said Ci-C\textsubscript{3}-fluoroalkoxy-group is, for example a 1,1-difluoromethoxy-, a 1,1,1-trifluoromethoxy-, a 2-fluoroethoxy-, a 3-fluoropropoxy-, a 2,2,2-trifluoroethoxy-, a 3,3,3-trifluoropropoxy- particularly a "Ci-C\textsubscript{2}-fluoroalkoxy-" group.

The term "alkylamino-" is to be understood as preferably meaning an alkylamino group with one linear or branched alkyl group as defined supra. (Ci-C\textsubscript{3})-alkylamino- for example means a monoalkylamino group with 1, 2 oder 3 carbon atoms, (Ci-C\textsubscript{6})-alkylamino- with 1, 2, 3, 4, 5 or 6 carbon atoms. The term "alkylamino-" comprises for example methylamino-, ethylamino-, n-propylamino-, isopropylamino-, tert.-butylamino-, n-pentylamino- or n-hexylamino-.

The term "dialkylamino-" is to be understood as preferably meaning an alkylamino group having two linear or branched alkyl groups as defined supra, which are independent from each other. (Ci-C\textsubscript{3})-dialkylamino- for example represents a dialkylamino group with two alkyl groups each of them having 1 to 3 carbon atoms per alkyl group. The term "dialkylamino-" comprises for example: N,N-Dimethylamino-, N,N-Diethylamino-, N-Ethyl-N-methylamino-, N-Methyl-N-n-propylamino-, N-Isopropyl-N-n-propylamino-, N-t-Butyl-N-methylamino-, N-Ethyl-N-n-pentylamino- und N-n-Hexyl-N-methylamino-.

The term "cyclic amine" is to be understood as preferably meaning a saturated, monocyclic group with 4 to 10, preferably 4 to 7 ring atoms, of which at least one ring atom is a nitrogen atom. Suitable cyclic amines are especially azetidine, pyrrolidine, piperidine, piperazine, 1-methylpiperazine, morpholine, thiomorpholine, which could be optionally substituted by one or two methyl- groups.

The term "halo-Ci-C\textsubscript{3}-alkyl-" is to be understood as preferably meaning a linear or branched, saturated, monovalent hydrocarbon group in which the term "Ci-C\textsubscript{3}-alkyl-" is defined supra, and in which one or more hydrogen atoms is replaced by a halogen atom, identically or differently, i.e. one halogen atom being independent from another. Particularly, said halogen atom is fluorine. Preferably, said halo-Ci-C\textsubscript{3}-alkyl-group is a fluoro-Ci-C\textsubscript{3}-alkyl- group, such as for example -CF\textsubscript{3}, -CHF\textsubscript{2}, -CH\textsubscript{2}F, -CF\textsubscript{2}CF\textsubscript{3}, or -CH\textsubscript{2}CF\textsubscript{3}, more preferably it is -CF\textsubscript{3}. 
The term "phenyl-Ci-C3-alkyl-" is to be understood as preferably meaning a phenyl- group, in which one of the hydrogen atoms is replaced by a Ci-C3-alkyl- group, as defined supra, that links the phenyl-Ci-C3-alkyl-group to the rest of the molecule. Particularly, the "phenyl-Ci-C3-alkyl-" is a phenyl-C,C-alkyl-, preferably it is a benzyl- group.

The term "heteroaryl-" is to be understood as preferably meaning a monovalent, aromatic ring system having 5, 6, 7, 8, 9, 10, 11, 12, 13 or 14 ring atoms (a "5- to 14-membered heteroaryl-" group), particularly 5 (a "5-membered heteroaryl-") or 6 (a "6-membered heteroaryl-") or 9 (a "9-membered heteroaryl-") or 10 ring atoms (a "10-membered heteroaryl-"), and which contains at least one heteroatom which may be identical or different, said heteroatom being such as oxygen, nitrogen or sulfur, and can be monocyclic, bicyclic, or tricyclic, and in addition in each case can be benzocoondensed. Particularly, heteroaryl- is selected from thienyl-, furanyl-, pyrrolyl-, oxazolyl-, thiazolyl-, imidazolyl-, pyrazolyl-, isoxazolyl-, isothiazolyl-, oxadiazolyl-, triazolyl-, thiadiazolyl-, tetrazolyl- etc., and benzo derivatives thereof, such as, for example, benzothienyl-, benzothienyl-, benzoaxazolyl-, benzoisoxazolyl-, benzimidazolyl-, benzotriazolyl-, indazolyl-, indolyl-, isoindolyl-, etc.; or pyridyl-, pyridazinyl-, pyrimidinyl-, pyrazinyl-, triazinyl-, etc., and benzo derivatives thereof, such as, for example, quinolinyl-, quinazolinyl-, isoquinolinyl-, etc.; or azocinyl-, indolizinyl-, purinyl-, etc., and benzo derivatives thereof; or cinnolinyl-, phthalazinyl-, quinazolinyl-, quinoxalinyl-, naphthyridinyl-, pteridinyl-, carbazolyl-, acridinyl-, phenazinyl-, phenothiazinyl-, phenoxazinyl-, xanthenyl-, or oxepinyl-, etc. Preferably, heteroaryl- is selected from monocyclic heteroaryl-, 5-membered heteroaryl- or 6-membered heteroaryl-.

The term "5-membered heteroaryl-" is understood as preferably meaning a monovalent, aromatic ring system having 5 ring atoms and which contains at least one heteroatom which may be identical or different, said heteroatom being such as oxygen, nitrogen or sulfur. Particularly, "5-membered heteroaryl-" is selected from thienyl-, furanyl-, pyrrolyl-, oxazolyl-, thiazolyl-, imidazolyl-, pyrazolyl-, isoxazolyl-, isothiazolyl-, oxadiazolyl-, triazolyl-, thiadiazolyl-, tetrazolyl-. The term "6-membered heteroaryl-" is understood as preferably meaning a monovalent, aromatic ring system having 6 ring atoms and which contains at least one heteroatom which may be identical or different, said heteroatom being such as oxygen, nitrogen or sulfur. Particularly, "6-membered heteroaryl-" is selected from pyridyl-, pyridazinyl-, pyrimidinyl-, pyrazinyl-, triazinyl-.

The term "heteroaryl-Ci-C3-alkyl-" is to be understood as preferably meaning a heteroaryl-, a 5-membered heteroaryl- or a 6-membered heteroaryl- group, each as defined supra, in which one of the hydrogen atoms is replaced by a Ci-C3-alkyl- group, as defined supra, that links the heteroaryl-Ci-C3-alkyl- group to the rest of the molecule. Particularly, the "heteroaryl-Ci-C3-alkyl-" is a heteroaryl-C,C-alkyl-, a pyridinyl-Ci-C3-alkyl-, a pyridinylmethylyl-, a pyridinylethyl-, a pyridinylpropyl-, a pyridinyl-
Ci-C3-alkyl-, a pyrimidinylmethyl-, a pyrimidinylethyl-, a pyrimidinylpropyl-, preferably a pyrimidinylmethyl- or a pyrimidinylethyl- or a pyrimidinylethyl- or a pyrimidinylpropyl- group.

As used herein, the term "leaving group" refers to an atom or a group of atoms that is displaced in a chemical reaction as stable species taking with it the bonding electrons. Preferably, a leaving group is selected from the group comprising: halo, in particular chloro, bromo or iodo, methanesulfonyloxy-, p-toluenesulfonyloxy-, trifluoromethanesulfonyloxy-, nonafluorobutanesulfonyloxy-, (4-bromobenzene)sulfonyloxy-, (4-nitro-benzene)sulfonyloxy-, (2-nitro-benzene)-sulfonyloxy-, (4-isopropyl-benzene)sulfonyloxy-, (2,4,6-trimethyl-benzene)sulfonyloxy-, (4-tertbutyl-benzene)sulfonyloxy-, benzenesulfonyloxy-, and (4-methoxy-benzene)sulfonyloxy-.

The term "Ci-Cs-alkyl-" as used throughout this text, e.g. in the context of the definition of "Ci-Cio-alkyl-" is to be understood as meaning an alkyl- group having a finite number of carbon atoms of 1 to 10, i.e. 1, 2, 3, 4, 5, 6, 7, 8, 9 or 10 carbon atoms. It is to be understood further that said term "Ci-Cio-" is to be interpreted as any sub-range comprised therein, e.g. Ci-Cio, Ci-C9, Ci-Cs, Ci-C7, Ci-C6, Ci-C5, Ci-C4, Ci-C3, C1-C2, C2-C10, C2-C9, C2-C8, C2-C7, C2-C6, C2-C5, C2-C4, C2-C3, C3-C10, C3-C9, C3-C8, C3-C7, C3-C6, C3-C5, C3-C4, C4-C10, C4-C9, C4-C8, C4-C7, C4-C6, C4-C5, C5-C10, C5-C9, C5-C8, C5-C7, C5-C6, C6-C10, C6-C9, C6-C8, C6-C7, C6-C6, C7-C10.

Similarly, as used herein, the term "Ci-Ce-" as used throughout this text, e.g. in the context of the definition of "Ci-C6-alkyl-" "Ci-C6-alkoxy-" is to be understood as meaning an alkyl- group having a finite number of carbon atoms of 1 to 6, i.e. 1, 2, 3, 4, 5 or 6 carbon atoms. It is to be understood further that said term "Ci-Ce-" is to be interpreted as any sub-range comprised therein, e.g. Ci-Ce, C1-C5, C1-C4, C1-C3, C1-C2, C2-C6, C2-C5, C2-C4, C2-C3, C3-C6, C3-C5, C3-C4, C4-C6, C4-C5, C5-C6.

Similarly, as used herein, the term "Ci-C3-alkyl-" as used throughout this text, e.g. in the context of the definition of "Ci-C3-alkyl-" "Ci-C3-alkoxy-" or "Ci-C3-fluoroalkoxy-" is to be understood as meaning an alkyl- group having a finite number of carbon atoms of 1 to 3, i.e. 1, 2 or 3 carbon atoms. It is to be understood further that said term "Ci-C3-" is to be interpreted as any sub-range comprised therein, e.g. C1-C3, C1-C2, C2-C3.

Further, as used herein, the term "C1-C3-alkyl-" as used throughout this text, e.g. in the context of the definition of "C1-C3-alkyl-" is to be understood as meaning a cycloalkyl- group having a finite number of carbon atoms of 3 to 6, i.e. 3, 4, 5 or 6 carbon atoms. It is to be understood further that said term "C1-C3-" is to be interpreted as any sub-range comprised therein, e.g. C3-C6, C3-C5, C3-C4, C4-C6, C4-C5, C5-C6.

Further, as used herein, the term "C1-C7-alkyl-" as used throughout this text, e.g. in the context of the definition of "C1-C7-alkyl-" is to be understood as meaning a cycloalkyl- group having a finite number of carbon atoms of 7 to 10, i.e. 7, 8, 9 or 10 carbon atoms. It is to be understood further that said term "C1-C7-" is to be interpreted as any sub-range comprised therein, e.g. C7-C10, C7-C9, C7-C8, C8-C9, C9-C10.
carbon atoms of 3 to 7, i.e. 3, 4, 5, 6 or 7 carbon atoms, particularly 3, 4, 5 or 6 carbon atoms. It is to be understood further that said term “C3-C7” is to be interpreted as any sub-range comprised therein, e.g. C3-C7, C3-C6, C3-C5, C3-C4, C4-C7, C4-C6, C4-C5, C5-C7, C5-C6, C6-C7.

A symbol  at a bond denotes the linkage site in the molecule.

As used herein, the term “one or more times”, e.g. in the definition of the substituents of the compounds of the general formulae of the present invention, is understood as meaning one, two, three, four or five times, particularly one, two, three or four times, more particularly one, two or three times, even more particularly one or two times.

Where the plural form of the word compounds, salts, hydrates, solvates and the like, is used herein, this is taken to mean also a single compound, salt, isomer, hydrate, solvate or the like.

In another embodiment the present invention concerns compounds of general formula (I), wherein

R1 represents a group selected from Ci-C6-alkyl-, Cs-Cs-cycloalkyl-,

wherein said group is optionally substituted with one substituent selected from the group of hydroxy, halo-Ci-C2-alkyl-, Ci-C3-alkoxy-, Ci-C2-fluoroalkoxy-, -NH2, alkylamino-, dialkylamino-, cyclic amines, -OP(OH)2, -C(0)OH, -C(0)NH2;

R2 represents the group

\[ \text{R3 represents a hydrogen atom, a fluoro atom or chloro atom, a SF}_5\text{ group, a Ci-C3-alkyl group or a fluoro-Ci-C3-alkyl group;} \]

R4 represents a hydrogen atom or a fluoro atom;

R5○, R6 represent, independently from each other, a group selected from a hydrogen atom, fluoro atom, chloro atom, bromo atom, cyano, Ci-C3-alkyl-, Ci-C3-alkoxy-, halo-Ci-C3-alkyl-, Ci-C3-fluoroalkoxy-;

R6, R7 represent, independently from each other, a group selected from a hydrogen atom, fluoro atom, chloro atom, Ci-C3-alkyl-, Ci-C3-alkoxy-, halo-Ci-C3-alkyl-, Ci-C3-fluoroalkoxy-;

and the salts, solvates or salts of solvates thereof.
In a preferred embodiment the present invention concerns compounds of general formula (I), wherein

R¹ represents a group selected from CI-C6-alkyl-, C₅-C₆-cycloalkyl-

wherein said group is optionally substituted with one substituent selected from the group of hydroxy, CI-C₃-alkoxy-, -Nth, alkylamino-, dialkylamino-, cyclic amines,

-OP(0)(OH)₂;

R² represents the group

\[
\text{R}^3 \text{ represents a hydrogen atom, fluoro atom or chloro atom, a } -\text{SF}_5 \text{ group, a CI-C3-alkyl- group or a fluoro-CI-C3-alkyl- group;}
\]

R⁴ represents a hydrogen atom or a fluoro atom;

R⁵⁺, R⁶⁻ represent, independently from each other, a group selected from a hydrogen atom, fluoro atom, chloro atom, bromo atom, cyano, methyl-, methoxy-, halomethyl-, fluoromethoxy-;

R⁶⁻, R⁷⁻ represent, independently from each other, a group selected from a hydrogen atom, a fluoro atom and a chloro atom;

and the salts, solvates or salts of solvates thereof.

In another preferred embodiment the present invention concerns compounds of general formula (I), wherein

R¹ represents a CI-C₆-alkyl- group,

wherein said group is optionally substituted with one substituent, selected from the group of CI-C₃-alkoxy-, -NH₂, alkylamino-, dialkylamino-, and cyclic amines;

R² represents the group

\[
\text{R}^3 \text{ represents a hydrogen atom, fluoro atom or chloro atom or a } -\text{SF}_5, \text{ methyl-, ethyl- or trifluoro methyl- group;}
\]
$R^4$ represents a hydrogen atom or fluoro atom;

$R^6$, $R^7$ represent, independently from each other, a group selected from a hydrogen atom, fluoro atom and a chloro atom;

and the salts, solvates or salts of solvates thereof.

In a particularly preferred embodiment the present invention concerns compounds of general formula (I), wherein

$R^1$ represents a C1-C3-alkyl-group;

$R^2$ represents the group

![Chemical Structure](image)

$R^3$ represents a hydrogen atom or fluoro atom or a methyl-group;

$R^4$ represents a hydrogen atom;

$R^6$ represents a group selected from a hydrogen atom, fluoro atom and chloro atom;

$R^7$ represents a hydrogen atom;

and the salts, solvates or salts of solvates thereof.

In another particularly preferred embodiment the present invention concerns compounds of general formula (I), wherein

$R^1$ represents a C1-C3-alkyl-group;

$R^2$ represents the group

![Chemical Structure](image)

$R^3$ represents a hydrogen atom or fluoro atom or a methyl-group;

$R^4$ represents a hydrogen atom;

$R^6$ represents a group selected from a hydrogen atom and a fluoro atom;

$R^7$ represents a hydrogen atom;

and the salts, solvates or salts of solvates thereof.
In another particularly preferred embodiment the present invention concerns compounds of general formula (I), wherein

\[ R^1 \] represents a methyl- or an ethyl- group;
\[ R^2 \] represents the group

\[ \text{[Diagram]} \]

\[ R^3 \] represents a hydrogen atom or fluoro atom or a methyl- group;
\[ R^4 \] represents a hydrogen atom;
and the salts, solvates or salts of solvates thereof.

In another embodiment the invention relates to compounds of formula (I), in which \( R^1 \) represents a group selected from Ci-C6-alkyl-, Cs-Cs-cycloalkyl-, 4- to 7-membered heterocyclyl-, phenyl-, heteroaryl-, phenyl-Ci-C3-alkyl- and heteroaryl-Ci-C3-alkyl-, wherein said group is optionally substituted with one or two or three substituents, identically or differently, selected from the group of hydroxy, cyano, halogen, halo-Ci-C3-alkyl-, Ci-C6-alkoxy-, Ci-C3-fluoroalkoxy-, -NH\(_2\), alkylamino-, dialkylamino-, acetylamino-, N-methyl-N-acetylamino-, cyclic amines, -OP(0)(OH)\(_2\), -C(0)OH, -C(0)NH\(_2\).

In another embodiment the invention relates to compounds of formula (I), in which \( R^1 \) represents a group selected from Ci-C3-alkyl-, Cs-Cs-cycloalkyl-, 4- to 7-membered heterocyclyl-, phenyl-, heteroaryl-, phenyl-Ci-C\(_2\)-alkyl- and heteroaryl-Ci-C\(_2\)-alkyl-, wherein said group is optionally substituted with one or two or three substituents, identically or differently, selected from the group of hydroxy, cyano, halogen, halo-Ci-C\(_2\)-alkyl-, Ci-C3-alkoxy-, Ci-C\(_2\)-fluoroalkoxy-, -NH\(_2\), alkylamino-, dialkylamino-, acetylamino-, N-methyl-N-acetylamino-, cyclic amines.

In another embodiment the invention relates to compounds of formula (I), in which \( R^1 \) represents a group selected from Ci-C6-alkyl-, Cs-Cs-cycloalkyl-, wherein said group is optionally substituted with one substituent selected from the group of hydroxy, halo-Ci-C2-alkyl-, Ci-C3-alkoxy-, Ci-C2-fluoroalkoxy-, -NH2, alkylamino-, dialkylamino-, cyclic amines, -OP(0)(OH)\(_2\), -C(0)OH, -C(0)NH\(_2\).
In another embodiment the invention relates to compounds of formula (I), in which $R^1$ represents a group selected from $\text{Ci-C6-alkyl}$-, $\text{Cs-Cs-cycloalkyl}$-, wherein said group is optionally substituted with one substituent selected from the group of hydroxy, $\text{Ci-C3-alkoxy}$-, $\text{-NH}_2$, alkylamino-, dialkylamino-, cyclic amines, $\text{-OP(O)(OH)}_2$.

In another embodiment the invention relates to compounds of formula (I), in which $R^1$ represents a group selected from methyl-, ethyl-, propan-2-yl-, ieri-butyl-, cyclopropyl-, cyclohexyl- or phenyl-,

wherein said group is optionally substituted with one substituent selected from the group of hydroxy or methoxy-.

In another preferred embodiment the invention relates to compounds of formula (I), in which $R^1$ represents a $\text{Ci-C6-alkyl}$-group,

wherein said group is optionally substituted with one substituent selected from the group of $\text{Ci-C3-alkoxy}$-, $\text{-NH}_2$, alkylamino-, dialkylamino-, and cyclic amines.

In another preferred embodiment the invention relates to compounds of formula (I), in which $R^1$ represents a group selected from methyl-, ethyl-, propan-2-yl-, ieri-butyl-, cyclopropyl-, cyclopentyl-, cyclohexyl- or phenyl-,

wherein said group is optionally substituted with one substituent, selected from the group of $\text{Ci-C3-alkoxy}$-, $\text{-NH}_2$, alkylamino-, dialkylamino-, and cyclic amines.

In a particularly preferred embodiment the present invention concerns compounds of general formula (I), wherein $R^1$ represents a $\text{Ci-C3-alkyl}$-group.

In another particularly preferred embodiment the present invention concerns compounds of general formula (I), wherein $R^1$ represents a methyl- or an ethyl- group.

In another particularly preferred embodiment the present invention concerns compounds of general formula (I), wherein $R^1$ represents a methyl- group.

In another particularly preferred embodiment the present invention concerns compounds of general formula (I), wherein $R^1$ represents an ethyl- group.
In another embodiment the invention relates to compounds of formula (I), in which \( R^2 \) represents the group

\[
\begin{align*}
\text{\[R^5a, R^5b, R^6, R^7\]}
\end{align*}
\]

wherein

\( R^{5a}, R^{5b} \) represent, independently from each other, a group selected from a hydrogen atom, fluoro atom, chloro atom, bromo atom, cyano, Ci-C3-alkyl-, Ci-C3-alkoxy-, halo-Ci-C3-alkyl-, C\(_1\)-C3-fluoroalkoxy-.

and wherein

\( R^6, R^7 \) represent, independently from each other, a group selected from a hydrogen atom, fluoro atom, chloro atom, Ci-C3-alkyl-, Ci-C3-alkoxy-, halo-Ci-C3-alkyl-, Ci-C3-fluoroalkoxy-.

In a preferred embodiment the invention relates to compounds of formula (I), in which \( R^2 \) represents the group

\[
\begin{align*}
\text{\[R^5a, R^5b, R^6, R^7\]}
\end{align*}
\]

wherein

\( R^{5a}, R^{5b} \) represent, independently from each other, a group selected from a hydrogen atom, fluoro atom, chloro atom, bromo atom, cyano, methyl-, methoxy-, halomethyl-, fluoromethoxy-, and wherein

\( R^6, R^7 \) represent, independently from each other, a group selected from a hydrogen atom, a fluoro atom or a chloro atom.
In a particularly preferred embodiment the invention relates to compounds of formula (I), in which \( R_2 \) represents the group

\[
\begin{align*}
\text{wherein} \\
R_6, R_7 & \text{ represent, independently from each other, a group selected from a hydrogen atom, fluoro atom or chloro atom.}
\end{align*}
\]

In another particularly preferred embodiment the invention relates to compounds of formula (I), in which \( R_2 \) represents the group

\[
\begin{align*}
\text{wherein} \\
R_6 & \text{ represents a group selected from hydrogen, a fluoro or chloro atom, and wherein} \\
R_7 & \text{ represents hydrogen.}
\end{align*}
\]

In another particularly preferred embodiment the invention relates to compounds of formula (I), in which \( R_2 \) represents the group

\[
\begin{align*}
\text{wherein} \\
R_6 & \text{ represents a group selected from hydrogen or a fluoro atom, and wherein} \\
R_7 & \text{ represents hydrogen.}
\end{align*}
\]
In another particularly preferred embodiment the invention relates to compounds of formula (I), in which R^2 represents the group

![Chemical Structure](image1)

In another embodiment the invention relates to compounds of formula (I), in which R^3 and R^4 represent, independently from each other, a group selected from a hydrogen atom, fluoro atom, chloro atom, bromo atom, cyano, -SFs, Ci-C3-alkyl-, Ci-C3-alkoxy-, halo-Ci-C3-alkyl-, Ci-C3-fluoroalkoxy-.

In a preferred embodiment the invention relates to compounds of formula (I), in which R^3 represents a hydrogen atom, fluoro atom or chloro atom, a -SFs or Ci-C3-alkyl- group, or a fluoro-Ci-C3-alkyl- group, and R^4 represents a hydrogen atom or a fluoro atom.

In another preferred embodiment the invention relates to compounds of formula (I), in which R^3 represents a hydrogen atom, fluoro atom or chloro atom, or a -SFs or a methyl- group, and R^4 represents a hydrogen atom or a fluoro atom.

In another preferred embodiment the invention relates to compounds of formula (I), in which R^3 represents a hydrogen atom, fluoro atom or chloro atom, or a -SFs, methyl-, ethyl- or trifluoromethyl-group, and R^4 represents a hydrogen atom or a fluoro atom.

In another preferred embodiment the invention relates to compounds of formula (I), in which R^3 represents a hydrogen atom, fluoro atom or chloro atom, or a methyl-, ethyl- or trifluoromethyl- group, and R^4 represents a hydrogen atom.

In another preferred embodiment the invention relates to compounds of formula (I), in which R^3 represents a hydrogen atom, fluoro atom or chloro atom, or a methyl-, ethyl- or trifluoromethyl- group, and R^4 represents a hydrogen atom.

In another preferred embodiment the invention relates to compounds of formula (I), in which R^3 represents a hydrogen atom or fluoro atom, or a -SFs, methyl-, ethyl- or trifluoromethyl- group, and R^4 represents a hydrogen atom or a fluoro atom.
In another preferred embodiment the invention relates to compounds of formula (I), in which $R^3$ represents a hydrogen atom or fluoro atom, or a methyl-, ethyl- or trifluoromethyl- group, and $R^4$ represents a hydrogen atom or a fluoro atom.

In another preferred embodiment the invention relates to compounds of formula (I), in which $R^3$ represents a hydrogen atom or fluoro atom, or a -SF$_5$, methyl-, ethyl- or trifluoromethyl- group, and $R^4$ represents a hydrogen atom.

In another preferred embodiment the invention relates to compounds of formula (I), in which $R^3$ represents a hydrogen atom or fluoro atom, or a methyl-, ethyl- or trifluoromethyl- group, and $R^4$ represents a hydrogen atom.

In another preferred embodiment the invention relates to compounds of formula (I), in which $R^3$ represents a -SF$_5$, methyl-, ethyl- or trifluoromethyl- group, and $R^4$ represents a hydrogen atom or a fluoro atom.

In another preferred embodiment the invention relates to compounds of formula (I), in which $R^3$ represents a methyl-, ethyl- or trifluoromethyl- group, and $R^4$ represents a hydrogen atom or a fluoro atom.

In another preferred embodiment the invention relates to compounds of formula (I), in which $R^3$ represents a methyl-, ethyl- or trifluoromethyl- group, and $R^4$ represents a hydrogen atom.

In a particularly preferred embodiment the invention relates to compounds of formula (I), in which $R^3$ represents a hydrogen atom or fluoro atom, or a -SF$_5$ or methyl- group, and $R^4$ represents a hydrogen atom or a fluoro atom.

In a particularly preferred embodiment the invention relates to compounds of formula (I), in which $R^3$ represents a hydrogen atom or fluoro atom, or a methyl- group, and $R^4$ represents a hydrogen atom or a fluoro atom.

In another particularly preferred embodiment the invention relates to compounds of formula (I), in which $R^3$ represents a hydrogen atom or fluoro atom, or a -SF$_5$ or methyl- group, and $R^4$ represents a hydrogen atom.

In another particularly preferred embodiment the invention relates to compounds of formula (I), in which $R^3$ represents a hydrogen atom or fluoro atom, or a methyl- group, and $R^4$ represents a hydrogen atom.
In another particularly preferred embodiment the invention relates to compounds of formula (I), in which
R₃ represents a hydrogen atom, and R⁴ represents a hydrogen atom.

In another particularly preferred embodiment the invention relates to compounds of formula (I), in which
R₃ represents a methyl-, ethyl- or trifluoromethyl- group.

In another particularly preferred embodiment the invention relates to compounds of formula (I), in which
R₃ represents a fluoro atom, and R⁴ represents a hydrogen atom.

In another particularly preferred embodiment the invention relates to compounds of formula (I), in which
R₃ represents a methyl- group, and R⁴ represents a hydrogen atom.

In another embodiment the invention relates to compounds of formula (I), in which R₃ represents a group
selected from a hydrogen atom, fluoro atom, chloro atom, -SF₅, Ci-C₂-alkyl-, Ci-C₂-alkoxy-, halo-Ci-C₂ alkyl-, Ci-C₂-fluoroalkoxy-.

In a preferred embodiment the invention relates to compounds of formula (I), in which R₃ represents a
hydrogen atom, a fluoro atom or a chloro atom, a -SF₅ or Ci-C3-alkyl- group or a fluoro-Ci-C3-alkyl- group.

In another preferred embodiment the invention relates to compounds of formula (I), in which R₃ represents a
hydrogen atom, fluoro atom or chloro atom, a -SF₅ or Ci-C2-alkyl- group or a fluoro-Ci-C2-alkyl- group.

In another preferred embodiment the invention relates to compounds of formula (I), in which R₃ represents a
hydrogen atom, fluoro atom or chloro atom or a -SF₅ or methyl- group.

In another preferred embodiment the invention relates to compounds of formula (I), in which R₃ represents a
hydrogen atom, fluoro atom or chloro atom, or a -SF₅, methyl-, ethyl- or trifluoromethyl-group.

In another preferred embodiment the invention relates to compounds of formula (I), in which R₃ represents a
hydrogen atom, fluoro atom or chloro atom, or a methyl-, ethyl- or trifluoromethyl- group.

In another preferred embodiment the invention relates to compounds of formula (I), in which R₃ represents a
hydrogen atom, fluoro atom, or a methyl-, ethyl- or trifluoromethyl- group.

In another preferred embodiment the invention relates to compounds of formula (I), in which R₃ represents a
methyl-, ethyl- or trifluoromethyl- group.
In another preferred embodiment the invention relates to compounds of formula (I), in which $R^3$ represents a hydrogen atom, a fluoro atom or a methyl-group.

In another preferred embodiment the invention relates to compounds of formula (I), in which $R^3$ represents a methyl-group.

In another preferred embodiment the invention relates to compounds of formula (I), in which $R^3$ represents a fluoro atom.

In another preferred embodiment the invention relates to compounds of formula (I), in which $R^3$ represents a hydrogen atom.

In another embodiment the invention relates to compounds of formula (I), in which $R^4$ represents a group selected from a hydrogen atom, fluoro atom, chloro atom, cyano, Ci-C3-alkyl-, Ci-C3-alkoxy-, halo-Ci-C3-alkyl-, Ci-C3-fluoroalkoxy-.

In another embodiment the invention relates to compounds of formula (I), in which $R^4$ represents a group selected from a hydrogen atom, fluoro atom, chloro atom, Ci-C3-alkyl-, Ci-C3-alkoxy-, halo-Ci-C3-alkyl-, C1-C3-fluoroalkoxy-.

In another embodiment the invention relates to compounds of formula (I), in which $R^4$ represents a group selected from a hydrogen atom, a fluoro atom or a chloro atom.

In a preferred embodiment the invention relates to compounds of formula (I), in which $R^4$ represents a group selected from a hydrogen atom or fluoro atom.

In another preferred embodiment the invention relates to compounds of formula (I), in which $R^4$ represents a fluoro atom.

In a particularly preferred preferred embodiment the invention relates to compounds of formula (I), in which $R^4$ represents a hydrogen atom.
In another embodiment the invention relates to compounds of formula (I), in which $R^5$, $R^6$ represent, independently from each other, a group selected from hydrogen, a fluoro atom, chloro atom, bromo atom, cyano, Ci-C3-alkyl-, Ci-C3-alkoxy-, halo-Ci-C3-alkyl-, Ci-C3-fluoroalkoxy-.

In another embodiment the invention relates to compounds of formula (I), in which $R^5$, $R^6$ represent, independently from each other, a group selected from hydrogen, a fluoro atom, chloro atom, bromo atom, cyano, methyl-, methoxy-, halomethyl-, fluoromethoxy-.

In another embodiment the invention relates to compounds of formula (I), in which $R^6$, $R^7$ represent, independently from each other, a group selected from a hydrogen atom, a fluoro atom, a chloro atom, Ci-C3-alkyl-, Ci-C3-alkoxy-, halo-Ci-C3-alkyl-, Ci-C3-fluoroalkoxy-.

In another embodiment the invention relates to compounds of formula (I), in which $R^6$ and $R^7$ represent, independently from each other, a group selected from a hydrogen atom, a fluoro atom and a chloro atom.

In another embodiment the invention relates to compounds of formula (I), in which $R^6$ and $R^7$ represent, independently from each other, a group selected from a hydrogen atom and a fluoro atom.

In a particularly preferred embodiment the invention relates to compounds of formula (I), in which $R^6$ represents hydrogen, para-illuoro, or para-chloro, whereby para refers to the point of attachment of $R^2$ to the rest of the molecule, and in which $R^7$ represents a hydrogen atom.

In another particularly preferred embodiment the invention relates to compounds of formula (I), in which $R^6$ represents para-illuoro, whereby para refers to the point of attachment of $R^2$ to the rest of the molecule, and in which $R^7$ represents a hydrogen atom.

In another particularly preferred embodiment the invention relates to compounds of formula (I), in which $R^6$ represents para-illuoro, whereby para refers to the point of attachment of $R^2$ to the rest of the molecule.

In a particularly preferred embodiment the invention relates to compounds of formula (I), in which $R^7$ represents a hydrogen atom.

It is to be understood that the present invention relates to any sub-combination within any embodiment of the present invention of compounds of formula (I), supra.

More particularly still, the present invention covers compounds of formula (I) which are disclosed in the Example section of this text, infra.
Very specially preferred are combinations of two or more of the abovementioned preferred embodiments.

In particular, a preferred subject of the present invention is a compound selected from:

- 5-Fluoro-4-(4-fluoro-1-benzofuran-7-yl)-N-{3-[(methylsulfonyl)methyl]-phenyl}pyrimidin-2-amine;
- N-{3-[(Ethylsulfonyl)-methyl]phenyl}-5-fluoro-4-(4-fluoro-1-benzofuran-7-yl)pyrimidin-2-amine;
- 5-Fluoro-4-(4-fluoro-1-benzofuran-7-yl)-N-{3-fluoro-5-[(methylsulfonyl)methyl]-phenyl}pyrimidin-2-amine, and
- 5-Fluoro-4-(4-fluoro-1-benzofuran-7-yl)-N-{3-methyl-5-[(methylsulfonyl)methyl]-phenyl}pyrimidin-2-amine;

and the salts, solvates or salts of solvates thereof.

The above mentioned definitions of radicals which have been detailed in general terms or in preferred ranges also apply to the end products of the formula (I) and, analogously, to the starting materials or intermediates required in each case for the preparation.

The invention further relates to compounds of the formula (6), in which $R^1$, $R^2$, $R^3$ and $R^4$ are as defined for the compounds of formula (I) according to the present invention.

![Chemical Structure](image)

and the salts, solvates or salts of solvates thereof.
The invention further relates to the use of compounds of the formula (6), in which $R^1$, $R^2$, $R^3$ and $R^4$ are as defined for the compounds of formula (I) according to the present invention,

![Chemical Structure](image)

and the salts, solvates or salts of solvates thereof, for the preparation of compounds of the formula (I).

The compounds according to the invention show a valuable pharmacological and pharmacokinetic spectrum of action which could not have been predicted.

They are therefore suitable for use as medicaments for the treatment and/or prophylaxis of disorders in humans and animals.

Within the scope of the present invention, the term "treatment" includes prophylaxis.

The pharmaceutical activity of the compounds according to the invention can be explained by their action as inhibitors of CDK9. Thus, the compounds according to the general formula (I) as well as the salts, solvates and salts of solvates thereof are used as inhibitors of CDK9.

Furthermore, the compounds according to the invention show a particularly high potency (demonstrated by a low $IC_{50}$ value in the CDK9/CycT1 assay) for inhibiting CDK9 activity.

In context of the present invention, the $IC_{50}$ value with respect to CDK9 can be determined by the methods described in the method section below. Preferably, it is determined according to Method la. ("CDK9/CycT1 kinase assay") described in the Materials and Method section below.

Surprisingly it turned out that the compounds according to the general formula (I) as well as the salts, solvates and salts of solvates thereof selectively inhibit CDK9 in comparison to other cyclin-dependent protein kinases, preferably in comparison to CDK2, in particular at high ATP concentrations. Thus, the compounds according to the general formula (I) as well as pharmaceutically acceptable salts thereof are preferably used as selective inhibitors for CDK9.

Compounds of the present invention according to general formula (I) show a significantly stronger CDK9 than CDK2 inhibition, particularly at high ATP concentrations.
In context of the present invention, the IC50 value with respect to CDK2 can be determined by the methods described in the method section below. Preferably, it is determined according to Method 2a. ("CDK2/CycE kinase assay") described in the Materials and Method section below.

Further, as compared to the CDK9 inhibitors described in the prior art, preferred compounds of the present invention according to general formula (I) show a surprisingly high potency for inhibiting CDK9 activity at high ATP concentrations, which is demonstrated by their low IC\textsubscript{50} value in the CDK9/CycT1 high ATP kinase assay. Thus, these compounds have a lower probability to be competed out of the ATP-binding pocket of CDK9/CycT1 kinase due to the high intracellular ATP concentration (R. Copeland et al., Nature Reviews Drug Discovery 2006, 5, 730-739). According to this property the compounds of the present invention are particularly able to inhibit CDK9/CycT1 within cells for a longer period of time as compared to classical ATP competitive kinase inhibitors. This increases the anti-tumor cell efficacy at pharmacokinetic clearance-mediated declining serum concentrations of the inhibitor after dosing of a patient or an animal.

In context of the present invention, the IC\textsubscript{50} value with respect to CDK9 at high ATP concentrations can be determined by the methods described in the method section below. Preferably, it is determined according to Method 1b ("CDK9/CycT1 high ATP kinase assay") as described in the Materials and Method section below.

In context of the present invention, the IC50 value with respect to CDK2 at high ATP concentrations can be determined by the methods described in the method section below. Preferably, it is determined according to Method 2b. ("CDK2/CycE high ATP kinase assay") as described in the Materials and Method section below.

Further, preferred compounds of the present invention according to formula (I) show an improved anti-proliferative activity in tumor cell lines such as HeLa, HeLa-MaTu-ADR, NCI-H460, DU145, Caco-2, B16F10, A2780 or MOLM-13, compared to the CDK9 inhibitors described in the prior art.

In context of the present invention, the anti-proliferative activity in tumor cell lines such as HeLa, HeLa-MaTu-ADR, NCI-H460, DU145, Caco-2, B16F10, A2780 or MOLM-13, is preferably determined according to Method 3. ("Proliferation Assay") as described in the Materials and Method section below.
A further subject matter of the present invention is the use of the compounds of general formula (I) according to the invention for the treatment and/or prophylaxis of disorders, preferably of disorders relating to or mediated by CDK9 activity, in particular of hyper-proliferative disorders, virally induced infectious diseases and/or of cardiovascular diseases, more preferably of hyper-proliferative disorders.

5 The compounds of the present invention may be used to inhibit the activity or expression of CDK9. Therefore, the compounds of formula (I) are expected to be valuable as therapeutic agents. Accordingly, in another embodiment, the present invention provides a method of treating disorders relating to or mediated by CDK9 activity in a patient in need of such treatment, comprising administering to the patient an effective amount of a compound of formula (I) as defined above. In certain embodiments, the disorders relating to CDK9 activity are hyper-proliferative disorders, virally induced infectious diseases and/or of cardiovascular diseases, more preferably hyper-proliferative disorders, particularly cancer.

The term “treating” or “treatment” as stated throughout this document is used conventionally, e.g., the management or care of a subject for the purpose of combating, alleviating, reducing, relieving, improving the condition of a disease or disorder, such as a carcinoma.

The term “subject” or “patient” includes organisms which are capable of suffering from a cell proliferative disorder or a disorder associated with reduced or insufficient programmed cell death (apoptosis) or who could otherwise benefit from the administration of a compound of the invention, such as human and non-human animals. Preferred humans include human patients suffering from or prone to suffering from a cell proliferative disorder or associated state, as described herein. The term “non-human animals” includes vertebrates, e.g., mammals, such as non-human primates, sheep, cow, dog, cat and rodents, e.g., mice, and non-mammals, such as chickens, amphibians, reptiles, etc.

The term “disorders relating to or mediated by CDK9” shall include diseases associated with or implicating CDK9 activity, for example the hyperactivity of CDK9, and conditions that accompany with these diseases. Examples of “disorders relating to or mediated by CDK9” include disorders resulting from increased CDK9 activity due to mutations in genes regulating CDK9 activity such as LARP7, HEXIM1/2 or 7sk snRNA, or disorders resulting from increased CDK9 activity due to activation of the CDK9/cyclinT/RNApolymerase II complex by viral proteins such as HIV-TAT or HTLV-TAX or disorders resulting from increased CDK9 activity due to activation of mitogenic signaling pathways.

The term “hyperactivity of CDK9” refers to increased enzymatic activity of CDK9 as compared to normal non-diseased cells, or it refers to increased CDK9 activity leading to unwanted cell proliferation, or to reduced or insufficient programmed cell death (apoptosis), or mutations leading to constitutive activation of CDK9.
The term "hyper-proliferative disorder" includes disorders involving the undesired or uncontrolled proliferation of a cell and it includes disorders involving reduced or insufficient programmed cell death (apoptosis). The compounds of the present invention can be utilized to prevent, inhibit, block, reduce, decrease, control, etc., cell proliferation and/or cell division, and/or produce apoptosis. This method comprises administering to a subject in need thereof, including a mammal, including a human, an amount of a compound of this invention, or a pharmaceutically acceptable salt, hydrate or solvate thereof which is effective to treat or prevent the disorder.

Hyper-proliferative disorders in the context of this invention include, but are not limited to, e.g., psoriasis, keloids and other hyperplasias affecting the skin, endometriosis, skeletal disorders, angiogenic or blood vessel proliferative disorders, pulmonary hypertension, fibrotic disorders, mesangial cell proliferative disorders, colonic polyps, polycystic kidney disease, benign prostate hyperplasia (BPH), and solid tumors, such as cancers of the breast, respiratory tract, brain, reproductive organs, digestive tract, urinary tract, eye, liver, skin, head and neck, thyroid, parathyroid, and their distant metastases. Those disorders also include lymphomas, sarcomas and leukemias.

Examples of breast cancer include, but are not limited to invasive ductal carcinoma, invasive lobular carcinoma, ductal carcinoma in situ, and lobular carcinoma in situ, and canine or feline mammary carcinoma.

Examples of cancers of the respiratory tract include, but are not limited to small-cell and non-small-cell lung carcinoma, as well as bronchial adenoma, pleuropulmonary blastoma, and mesothelioma.

Examples of brain cancers include, but are not limited to brain stem and hypophtalmic glioma, cerebellar and cerebral astrocytoma, glioblastoma, medulloblastoma, ependymoma, as well as neuroectodermal and pineal tumor.

Tumors of the male reproductive organs include, but are not limited to prostate and testicular cancer.

Tumors of the female reproductive organs include, but are not limited to endometrial, cervical, ovarian, vaginal and vulvar cancer, as well as sarcoma of the uterus.

Tumors of the digestive tract include, but are not limited to anal, colon, colorectal, esophageal, gallbladder, gastric, pancreatic, rectal, small-intestine, salivary gland cancers, and anal gland adenocarcinomas.

Tumors of the urinary tract include, but are not limited to bladder, penile, kidney, renal pelvis, ureter, urethral, and hereditary and sporadic papillary renal cancers.

Eye cancers include, but are not limited to intraocular melanoma and retinoblastoma.

Examples of liver cancers include, but are not limited to hepatocellular carcinoma (liver cell carcinomas with or without fibrolamellar variant), cholangiocarcinoma (intrahepatic bile duct carcinoma), and mixed hepatocellular cholangiocarcinoma.

Skin cancers include, but are not limited to squamous cell carcinoma, Kaposi’s sarcoma, malignant melanoma, Merkel cell skin cancer, non-melanoma skin cancer, and mast cell tumors.
Head-and-neck cancers include, but are not limited to laryngeal, hypopharyngeal, nasopharyngeal, oropharyngeal cancer, lip and oral cavity cancer, squamous cell cancer, and oral melanoma. Lymphomas include, but are not limited to AIDS-related lymphoma, non-Hodgkin's lymphoma, cutaneous T-cell lymphoma, Burkitt lymphoma, Hodgkin's disease, and lymphoma of the central nervous system.

Sarcomas include, but are not limited to sarcoma of the soft tissue, osteosarcoma, malignant fibrous histiocytoma, lymphosarcoma, rhabdomyosarcoma, malignant histiocytosis, fibrosarcoma, hemangiosarcoma, hemangiopericytoma, and leiomyosarcoma.

Leukemias include, but are not limited to acute myeloid leukemia, acute lymphoblastic leukemia, chronic lymphocytic leukemia, chronic myelogenous leukemia, and hairy cell leukemia.

Fibrotic proliferative disorders, i.e. the abnormal formation of extracellular matrices, that may be treated with the compounds and methods of the present invention include lung fibrosis, atherosclerosis, restenosis, hepatic cirrhosis, and mesangial cell proliferative disorders, including renal diseases such as glomerulonephritis, diabetic nephropathy, malignant nephrosclerosis, thrombotic microangiopathy syndromes, transplant rejection, and glomerulopathies.

Other conditions in humans or other mammals that may be treated by administering a compound of the present invention include tumor growth, retinopathy, including diabetic retinopathy, ischemic retinal- vein occlusion, retinopathy of prematurity and age-related macular degeneration, rheumatoid arthritis, psoriasis, and bullous disorders associated with subepidermal blister formation, including bullous pemphigoid, erythema multiforme and dermatitis herpetiformis.

The compounds of the present invention may also be used to prevent and treat diseases of the airways and the lung, diseases of the gastrointestinal tract as well as diseases of the bladder and bile duct. The disorders mentioned above have been well characterized in humans, but also exist with a similar etiology in other animals, including mammals, and can be treated by administering pharmaceutical compositions of the present invention.

In a further aspect of the present invention, the compounds according to the invention are used in a method for preventing and/or treating infectious diseases, in particular virally induced infectious diseases. The virally induced infectious diseases, including opportunistic diseases, are caused by retroviruses, hepadnaviruses, herpesviruses, flaviviridae, and/or adenoviruses. In a further preferred embodiment of this method, the retroviruses are selected from lentiviruses or oncoretroviruses, wherein the lentivirus is selected from the group comprising: HIV-1, HIV-2, FIV, BIV, SIVs, SHIV, CAEV, VMV or EIAV, preferably HIV-1 or HIV-2 and wherein the oncoretrovirus is selected from the group of: HTLV-I, HTLV-II or BLV. In a further preferred embodiment of this method, the hepadnavirus is selected from HBV, GSHV or WHV, preferably HBV, the herpesvirus is selected from the group
comprising: HSV I, HSV II, EBV, VZV, HCMV or HHV 8, preferably HCMV and the flaviviridae is selected from HCV, West Nile or Yellow Fever.

The compounds according to general formula (I) are also useful for prophylaxis and/or treatment of cardiovascular diseases such as cardiac hypertrophy, adult congenital heart disease, aneurysm, stable angina, unstable angina, angina pectoris, angioneurotic edema, aortic valve stenosis, aortic aneurysm, arrhythmia, arrhythmogenic right ventricular dysplasia, arteriosclerosis, arteriovenous malformations, atrial fibrillation, Behcet syndrome, bradycardia, cardiac tamponade, cardiomegaly, congestive cardiomyopathy, hypertrophic cardiomyopathy, restrictive cardiomyopathy, cardiovascular disease prevention, carotid stenosis, cerebral hemorrhage, Churg-Strauss syndrome, diabetes, Ebstein's Anomaly, Eisenmenger complex, cholesterol embolism, bacterial endocarditis, fibromuscular dysplasia, congenital heart defects, heart diseases, congestive heart failure, heart valve diseases, heart attack, epidural hematoma, hematoma, subdural, Hipple-Lindau disease, hyperemia, hypertension, pulmonary hypertension, hypertrophic growth, left ventricular hypertrophy, right ventricular hypertrophy, hypoplastic left heart syndrome, hypotension, intermittent claudication, ischemic heart disease, Klippel-Trenaunay-Weber syndrome, lateral medullary syndrome, long QT syndrome mitral valve prolapse, moyamoya disease, mucocutaneous lymph node syndrome, myocardial infarction, myocardial ischemia, myocarditis, pericarditis, peripheral vascular diseases, phlebitis, polyarteritis nodosa, pulmonary atresia, Raynaud disease, restenosis, Sneddon syndrome, stenosis, superior vena cava syndrome, syndrome X, tachycardia, Takayasu's arteritis, hereditary hemorrhagic telangiectasia, telangiectasis, temporal arteritis, tetralogy of fallot, thromboangiitis obliterans, thrombosis, thromboembolism, tricuspid atresia, varicose veins, vascular diseases, vasculitis, vasospasm, ventricular fibrillation, Williams syndrome, peripheral vascular disease, varicose veins and leg ulcers, deep vein thrombosis, Wolff-Parkinson-White syndrome. Preferred are cardiac hypertrophy, adult congenital heart disease, aneurysms, angina, angina pectoris, arrhythmias, cardiovascular disease prevention, cardiomyopathies, congestive heart failure, myocardial infarction, pulmonary hypertension, hypertrophic growth, restenosis, stenosis, thrombosis and arteriosclerosis.

A further subject matter of the present invention is the use of the compounds of general formula (I) according to the invention as a medicament.

A further subject matter of the present invention is the use of the compounds of general formula (I) according to the invention for the treatment and/or prophylaxis of disorders, in particular of the disorders mentioned above.

A further subject matter of the present invention is the use of the compounds of general formula (I) according to the invention for the treatment and/or prophylaxis of hyper-proliferative disorders, virally induced infectious diseases and/or of cardiovascular diseases.
A preferred subject matter of the present invention is the use of the compounds of general formula (I) according to the invention for the treatment and/or prophylaxis of lung carcinomas, especially non-small cell lung carcinomas, prostate carcinomas, especially hormone-independent human prostate carcinomas, cervical carcinomas, including multidrug-resistant human cervical carcinomas, colorectal carcinomas, melanomas, ovarian carcinomas or leukemias, especially acute myeloid leukemias.

A further subject matter of the present invention are the compounds according to the invention for the use as a medicament.

A further subject matter of the present invention are the compounds according to the invention for the use of treating and/or prophylaxis of the disorders mentioned above.

A further subject matter of the present invention are the compounds according to the invention for the use of treating and/or prophylaxis of hyper-proliferative disorders, virally induced infectious diseases and/or of cardiovascular diseases.

A preferred subject matter of the present invention are the compounds according to the invention for the use of treating and/or prophylaxis of lung carcinomas, especially non-small cell lung carcinomas, prostate carcinomas, especially hormone-independent human prostate carcinomas, cervical carcinomas, including multidrug-resistant human cervical carcinomas, colorectal carcinomas, melanomas, ovarian carcinomas or leukemias, especially acute myeloid leukemias.

A further subject matter of the present invention are the compounds according to the invention for the use in a method for the treatment and/or prophylaxis of the disorders mentioned above.

A further subject matter of the present invention are the compounds according to the invention for the use in a method for the treatment and/or prophylaxis of hyper-proliferative disorders, virally induced infectious diseases and/or of cardiovascular diseases.

A preferred subject matter of the present invention are the compounds according to the invention for the use in a method of treatment and/or prophylaxis of lung carcinomas, especially non-small cell lung carcinomas, prostate carcinomas, especially hormone-independent human prostate carcinomas, cervical carcinomas, including multidrug-resistant human cervical carcinomas, colorectal carcinomas, melanomas, ovarian carcinomas or leukemias, especially acute myeloid leukemias.

A further subject matter of the present invention is the use of the compounds according to the invention in the manufacture of a medicament for the treatment and/or prophylaxis of disorders, in particular the disorders mentioned above.
A further subject matter of the present invention is the use of the compounds according to the invention in the manufacture of a medicament for the treatment and/or prophylaxis of hyper-proliferative disorders, virally induced infectious diseases and/or of cardiovascular diseases.

A preferred subject matter of the present invention is the use of the compounds according to the invention in the manufacture of a medicament for the treatment and/or prophylaxis of lung carcinomas, especially non-small cell lung carcinomas, prostate carcinomas, especially hormone-independent human prostate carcinomas, cervical carcinomas, including multidrug-resistant human cervical carcinomas, colorectal carcinomas, melanomas, ovarian carcinomas or leukemias, especially acute myeloid leukemias.

A further subject matter of the present invention is a method for the treatment and/or prophylaxis of disorders, in particular the disorders mentioned above, using an effective amount of the compounds according to the invention.

A further subject matter of the present invention is a method for the treatment and/or prophylaxis of hyper-proliferative disorders, virally induced infectious diseases and/or of cardiovascular diseases, using an effective amount of the compounds according to the invention.

A preferred subject matter of the present invention is a method for the treatment and/or prophylaxis of lung carcinomas, especially non-small cell lung carcinomas, prostate carcinomas, especially hormone-independent human prostate carcinomas, cervical carcinomas, including multidrug-resistant human cervical carcinomas, colorectal carcinomas, melanomas, ovarian carcinomas or leukemias, especially acute myeloid leukemias using an effective amount of the compounds according to the invention.

Another aspect of the present invention relates to pharmaceutical combinations comprising a compound of general formula (I) according to the invention in combination with at least one or more further active ingredients.

As used herein the term "pharmaceutical combination" refers to a combination of at least one compound of general formula (I) according to the invention as active ingredient together with at least one other active ingredient with or without further ingredients, carrier, diluents and/or solvents.

Another aspect of the present invention relates to pharmaceutical compositions comprising a compound of general formula (I) according to the invention in combination with an inert, nontoxic, pharmaceutically suitable adjuvant.
As used herein the term "pharmaceutical composition" refers to a galenic formulation of at least one pharmacologically active agent together with at least one further ingredient, carrier, diluent and/or solvent.

Another aspect of the present invention relates to the use of the pharmaceutical combinations and/or the pharmaceutical compositions according to the invention for the treatment and/or prophylaxis of disorders, in particular of the disorders mentioned above.

Another aspect of the present invention relates to the use of the pharmaceutical combinations and/or the pharmaceutical compositions according to the invention for the treatment and/or prophylaxis of lung carcinomas, especially non-small cell lung carcinomas, prostate carcinomas, especially hormone-independent human prostate carcinomas, cervical carcinomas, including multidrug-resistant human cervical carcinomas, colorectal carcinomas, melanomas, ovarian carcinomas or leukemias, especially acute myeloid leukemias.

Another aspect of the present invention relates to pharmaceutical combinations and/or the pharmaceutical compositions according to the invention for the treatment and/or prophylaxis of disorders, in particular of the disorders mentioned above.

Another aspect of the present invention relates to pharmaceutical combinations and/or the pharmaceutical compositions according to the invention for the treatment and/or prophylaxis of lung carcinomas, especially non-small cell lung carcinomas, prostate carcinomas, especially hormone-independent human prostate carcinomas, cervical carcinomas, including multidrug-resistant human cervical carcinomas, colorectal carcinomas, melanomas, ovarian carcinomas or leukemias, especially acute myeloid leukemias.

Compounds of formula (I) may be administered as the sole pharmaceutical agent or in combination with one or more additional therapeutic agents where the combination causes no unacceptable adverse effects. This pharmaceutical combination includes administration of a single pharmaceutical dosage formulation which contains a compound of formula (I) and one or more additional therapeutic agents, as well as administration of the compound of formula (I) and each additional therapeutic agent in its own separate pharmaceutical dosage formulation. For example, a compound of formula (I) and a therapeutic agent may be administered to the patient together in a single oral dosage composition such as a tablet or capsule, or each agent may be administered in separate dosage formulations.

Where separate dosage formulations are used, the compound of formula (I) and one or more additional therapeutic agents may be administered at essentially the same time (e.g., concurrently) or at separately staggered times (e.g., sequentially).
In particular, the compounds of the present invention may be used in fixed or separate combination with other anti-tumor agents such as alkylating agents, anti-metabolites, plant-derived anti-tumor agents, hormonal therapy agents, topoisomerase inhibitors, camptothecin derivatives, kinase inhibitors, targeted drugs, antibodies, interferons and/or biological response modifiers, anti-angiogenic compounds, and other anti-tumor drugs. In this regard, the following is a non-limiting list of examples of secondary agents that may be used in combination with the compounds of the present invention:

1311-chTNT, abarelix, abiraterone, aclacinomycin, aclacinomycin A, aclarubicin, aldesleukin, alienin, allotretinoin, altretamine, aminoglutethimide, amrucin, amscareine, anastrozole, arglabin, arsenic trioxide, asparaginase, azacitidine, basiliximab, BAY 80-6946, BAY 1000394, belotecan, bendamustine, bevacizumab, bexarotene, bicalutamide, bisantrene, bleomycin, bortezomib, buserelin, busulfan, cabazitaxel, calcium folinate, calcium levofolinate, capcetabinate, carboplatin, carmofur, carmustine, catumaxomab, celecoxib, celtmoleukin, cetuximab, chlorambucil, chlormadinone, chlormethine, cisplatin, cladribine, clodronic acid, clofarabine, crizotinib, cyclophosphamide, cyproterone, cytarbamide, dactinomycin, debepeotin alfa, dasatinib, daunorubicin, 2-deoxithymidine, denileukin difitox, denosumab, deslorelin, dibromopidium chloride, docetaxel, doxifluridine, doxorubicin, doxorubicin + estrone, eculizumab, edrecolomab, elliptinium acetate, eltrombopag, endostatin, enocitabine, epirubicin, epitiostanol, epoetin alfa, epoetin beta, eptaplatin, eribulin, erlotinib, estradiol, estramustine, etoposide, everolimus, exemestane, fadrozole, filgrastim, fludarabine, fluorouracil, flutamide, formestane, fotemustine, fulvestrant, gallium nitrate, ganirelix, gefitinib, gemcitabine, gemtuzumab, gluteoxim, goserein, histamine dihydrochloride, histrelin, hydroxycarbamide, 1-125 seeds, ibandronic acid, ibrutumomab tiuxetan, idarubicin, ifosfamide, imatinib, imiquimod, improsulfan, interferon alfa, interferon beta, interferon gamma, ipilimumab, irinotecan, ixabepilone, lanreotide, lapatinib, lenalidomide, lenogastim, lentilactone, letrozole, leuprolelin, levamisole, lisuride, lobaplatin, lomustine, lonidamine, masoprocol, medroxyprogesterone, megestrol, melfalan, meptiostane, mercaptopurine, methotrexate, methoxsalen, Methyl aminolevulinate, methyltestosterone, mifamurtide, miltefosine, miriplatin, mitobronitol, mitoguazone, mitolactol, mitomycin, mitotane, mitoxantrone, nedaplatin, nelarabine, nilotinib, nimustide, nitouzumab, nimustine, niracrine, oafenhumab, omeprazole, oprelvekin, oxaliplatin, p53 gene therapy, paclitaxel, palifermin, palladium-103 seed, pamidronic acid, panitumumab, pazopanib, pegaspargase, PEG-epoetin beta (methoxy PEG-epoetin beta), pegfilgrastim, peginterferon alfa-2b, pentetrexed, pentazocine, pentostatin, peplomycin, perfosfamide, picibanil, pirarubicin,plerixafor, plicamycin, poliglusam, polyestradiol phosphate, polysaccharide-K, porfimer sodium, pralatrexate, prednimustine, procarbazine, quinagolide, radium-223 chloride, raloxifene, raltitrexed, ranimustine, razoxane, refametinib, regorafenib, risedronic acid, rituximab, romidepsin, romiplostim, sargramostim, sipuleucel-T, sizofiran, sobuzoxane, sodium glycididazole, sorafenib, streptozocin, sunitinib, talapofin, tamibarotene, tamoxifen, tasonermin, teceleukin, tegafur, tegafur + gimeracil + oteracil, temoporfin, temozolomide, temsirolimus, teniposide, testosterone, tetrofosmin,
thalidomide, thiotepa, thymalfasin, tioguanine, tocilizumab, topotecan, toremifene, tositumomab, trabectedin, trastuzumab, treosulfan, tretinoin, trilostane, triporteolin, trofosfamide, tryptophan, ubenimex, valrubicin, vandetanib, vapreotide, vemurafenib, vinblastine, vincristine, vindesine, vinflunine, vinorelbine, vorinostat, vorozole, yttrium-90 glass microspheres, zinostatin, zinostatin stimalamer, zoledronic acid, zorubicin.

The compounds of the present invention may also be employed in cancer treatment in conjunction with radiation therapy and/or surgical intervention. Generally, the use of cytotoxic and/or cytostatic agents in combination with a compound or composition of the present invention will serve to:

1. yield better efficacy in reducing the growth of a tumor or even eliminate the tumor as compared to administration of either agent alone,
2. provide for the administration of lesser amounts of the administered chemotherapeutic agents,
3. provide for a chemotherapeutic treatment that is well tolerated in the patient with fewer deleterious pharmacological complications than observed with single agent chemotherapies and certain other combined therapies,
4. provide for treating a broader spectrum of different cancer types in mammals, especially humans,
5. provide for a higher response rate among treated patients,
6. provide for a longer survival time among treated patients compared to standard chemotherapy treatments,
7. provide a longer time for tumor progression, and/or
8. yield efficacy and tolerability results at least as good as those of the agents used alone, compared to known instances where other cancer agent combinations produce antagonistic effects.

Furthermore, the compounds of formula (I) may be utilized, as such or in compositions, in research and diagnostics, or as analytical reference standards, and the like, which are well known in the art.

The compounds according to the invention can act systemically and/or locally. For this purpose, they can be administered in a suitable way, such as, for example, by the oral, parenteral, pulmonal, nasal, sublingual, lingual, buccal, rectal, dermal, transdermal, conjunctival or otic route, or as an implant or stent.

For these administration routes, it is possible to administer the compounds according to the invention in suitable application forms.
Suitable for oral administration are administration forms which work as described in the prior art and deliver the compounds according to the invention rapidly and/or in modified form, which comprise the compounds according to the invention in crystalline and/or amorphous and/or dissolved form, such as, for example, tablets (coated or uncoated, for example tablets provided with enteric coatings or coatings whose dissolution is delayed or which are insoluble and which control the release of the compound according to the invention), tablets which rapidly decompose in the oral cavity, or films/wafers, films/lyophilizates, capsules (for example hard or soft gelatin capsules), sugar-coated tablets, granules, pellets, powders, emulsions, suspensions, aerosols or solutions.

Parenteral administration can take place with avoidance of an absorption step (for example intravenously, intraarterially, intracardially, intraspinally or intralumbally) or with inclusion of absorption (for example intramuscularly, subcutaneously, intracutaneously, percutaneously or intraperitoneally). Administration forms suitable for parenteral administration are, inter alia, preparations for injection and infusion in the form of solutions, suspensions, emulsions, lyophilizates or sterile powders.

Examples suitable for the other administration routes are pharmaceutical forms for inhalation (inter alia powder inhalers, nebulizers), nasal drops/solutions/sprays; tablets to be administered lingually, sublingually or buccally, films/wafers or capsules, suppositories, preparations for the eyes or ears, vaginal capsules, aqueous suspensions (lotions, shaking mixtures), lipophilic suspensions, ointments, creams, transdermal therapeutic systems (such as plasters, for example), milk, pastes, foams, dusting powders, implants or stents.

The compounds according to the invention can be converted into the stated administration forms. This can take place in a manner known per se by mixing with inert, nontoxic, pharmaceutically suitable adjuvants. These adjuvants include, inter alia, carriers (for example microcrystalline cellulose, lactose, mannitol), solvents (for example liquid polyethylene glycols), emulsifiers and dispersants or wetting agents (for example sodium dodecyl sulphate, polyoxysorbitan oleate), binders (for example polyvinylpyrrolidone), synthetic and natural polymers (for example albumin), stabilizers (for example antioxidants, such as, for example, ascorbic acid), colorants (for example inorganic pigments, such as, for example, iron oxides) and flavour- and/or odour-masking agents.

The present invention furthermore provides medicaments comprising at least one compound according to the invention, usually together with one or more inert, nontoxic, pharmaceutically suitable adjuvants, and their use for the purposes mentioned above.
When the compounds of the present invention are administered as pharmaceuticals, to humans or animals, they can be given per se or as a pharmaceutical composition containing, for example, 0.1% to 99.5% (more preferably 0.5% to 90%) of active ingredient in combination with one or more inert, nontoxic, pharmaceutically suitable adjuvants.

Regardless of the route of administration selected, the compounds of the invention of general formula (I) and/or the pharmaceutical composition of the present invention are formulated into pharmaceutically acceptable dosage forms by conventional methods known to those of skill in the art.

Actual dosage levels and time course of administration of the active ingredients in the pharmaceutical compositions of the invention may be varied so as to obtain an amount of the active ingredient which is effective to achieve the desired therapeutic response for a particular patient without being toxic to the patient.

Materials and Methods:

The percentage data in the following tests and examples are percentages by weight unless otherwise indicated; parts are parts by weight. Solvent ratios, dilution ratios and concentration data of liquid/liquid solutions are in each case based on volume.

Examples were tested in selected biological assays one or more times. When tested more than once, data are reported as either average values or as median values, wherein

- the average value, also referred to as the arithmetic mean value, represents the sum of the values obtained divided by the number of times tested, and
- the median value represents the middle number of the group of values when ranked in ascending or descending order. If the number of values in the data set is odd, the median is the middle value. If the number of values in the data set is even, the median is the arithmetic mean of the two middle values.

Examples were synthesized one or more times. When synthesized more than once, data from biological assays represent average values or median values calculated utilizing data sets obtained from testing of one or more synthetic batch.

The *in vitro* pharmacological properties of the compounds can be determined according to the following assays and methods.
la. CDK9/CycT1 kinase assay:

CDK9/CycT1-inhibitory activity of compounds of the present invention was quantified employing the CDK9/CycT1 TR-FRET assay as described in the following paragraphs:

Recombinant full-length His-tagged human CDK9 and CycT1, expressed in insect cells and purified by Ni-NTA affinity chromatography, were purchased from Invitrogen (Cat. No. PV4131). As substrate for the kinase reaction biotinylated peptide biotin-Ttds-YISPLKSPYKISEG (C-terminus amid form) was used which can be purchased e.g., from the company JERINI Peptide Technologies (Berlin, Germany).

For the assay 50 µl of a 100-fold concentrated solution of the test compound in DMSO was pipetted into a black low volume 384-well microtiter plate (Greiner Bio-One, Frickenhausen, Germany). 2 µl of a solution of CDK9/CycT1 in aqueous assay buffer [50 mM Tris/HCl pH 8.0, 10 mM MgCl₂, 1.0 mM dithiothreitol, 0.1 mM sodium ortho-vanadate, 0.01% (v/v) Nonidet-P-40 (Sigma)] were added and the mixture was incubated for 15 min at 22°C to allow pre-binding of the test compounds to the enzyme before the start of the kinase reaction. Then the kinase reaction was started by the addition of 3 µl of a solution of adenosine-tri-phosphate (ATP, 16.7 µM => final cone, in the 5 µl assay volume is 10 µM) and substrate (1.67 µM => final cone, in the 5 µl assay volume is 1 µM) in assay buffer and the resulting mixture was incubated for a reaction time of 25 min at 22°C. The concentration of CDK9/CycT1 was adjusted depending on the activity of the enzyme lot and was chosen appropriate to have the assay in the linear range, typical concentrations were in the range of 1 µg/mL. The reaction was stopped by the addition of 5 µl of a solution of TR-FRET detection reagents (0.2 µM streptavidine-XL665 [Cisbio Bioassays, Codolet, France] and 1 nM anti-RB(pSer807/pSer811)-antibody from BD Pharmingen [#558389] and 1.2 nM LANCE EU-W1024 labeled anti-mouse IgG antibody [Perkin-Elmer, product no. AD0077]) in an aqueous EDTA-solution (100 mM EDTA, 0.2% (w/v) bovine serum albumin in 100 mM HEPES/NaOH pH 7.0).

The resulting mixture was incubated 1 h at 22°C to allow the formation of complex between the phosphorylated biotinylated peptide and the detection reagents. Subsequently the amount of phosphorylated substrate was evaluated by measurement of the resonance energy transfer from the Eu-chelate to the streptavidine-XL. Therefore, the fluorescence emissions at 620 nm and 665 nm after excitation at 350 nm was measured in a HTRF reader, e.g., a Rubystar (BMG Labtechnologies, Offenburg, Germany) or a Viewlux (Perkin-Elmer). The ratio of the emissions at 665 nm and at 622 nm was taken as the measure for the amount of phosphorylated substrate. The data were normalised (enzyme reaction without inhibitor = 0% inhibition, all other assay components but no enzyme = 100% inhibition). Usually the test compounds were tested on the same microtiterplate in 11 different concentrations in the range of 20 µM to 0.1 nM (20 µM, 5.9 µM, 1.7 µM, 0.51 µM, 0.15 µM, 44 nM, 13 nM, 3.8 nM, 1.1 nM, 0.33 nM and 0.1 nM, the dilution series prepared separately before the assay on the level of the 100-fold concentrated solutions in DMSO by serial 1:3.4 dilutions) in duplicate values for each concentration and IC₅₀ values were calculated by a 4 parameter fit using an inhouse software.
lb. CDK9/CycT1 high ATP kinase assay

CDK9/CycT1 -inhibitory activity of compounds of the present invention at a high ATP concentration after preincubation of enzyme and test compounds was quantified employing the CDK9/CycT1 TR-FRET assay as described in the following paragraphs.

Recombinant full-length His-tagged human CDK9 and CycT1, expressed in insect cells and purified by Ni-NTA affinity chromatography, were purchased from Invitrogen (Cat. No PV4131). As substrate for the kinase reaction biotinylated peptide biotin-TdS-YISPLKSYKISEG (C-terminus in amid form) was used which can be purchased e.g. from the company JERINI peptide Technologies (Berlin, Germany).

For the assay 50 nl of a 1000-fold concentrated solution of the test compound in DMSO was pipetted into a black low volume 384-well microtiter plate (Greiner Bio-One, Frickenhausen, Germany), 2 µl of a solution of CDK9/CycT1 in aqueous assay buffer [50 mM Tris/HCl pH 8.0, 10 mM MgCl₂, 1.0 mM dithiothreitol, 0.1 mM sodium ortho-vanadate, 0.01% (v/v) Nonidet-P40 (Sigma)] were added and the mixture was incubated for 15 min at 22°C to allow pre-binding of the test compounds to the enzyme before the start of the kinase reaction. Then the kinase reaction was started by the addition of 3 µl of a solution of adenosine-tri-phosphate (ATP, 3.3 mM => final cone. in the 5 µl assay volume is 2 mM) and substrate (1.67 µM => final cone. in the 5 µl assay volume is 1 µM) in assay buffer and the resulting mixture was incubated for a reaction time of 25 min at 22°C. The concentration of CDK9/CycT1 was adjusted depending of the activity of the enzyme lot and was chosen appropriate to have the assay in the linear range, typical concentrations were in the range of 0.5 µg/ml. The reaction was stopped by the addition of 5 µl of a solution of TR-FRET detection reagents (0.2 µM streptavidine-XL665 [Cisbio Bioassays, Codolet, France] and 1 nM anti-RB(pSer807/pSer811)-antibody from BD Pharmingen [Cat. 558389] and 1.2 nM LANCE EU-W1024 labeled anti-mouse IgG antibody [Perkin-Elmer, product no. AD0077]) in an aqueous EDTA-solution (100 mM EDTA, 0.2% (w/v) bovine serum albumin in 100 mM HEPES/NaOH pH 7.0).

The resulting mixture was incubated 1 h at 22°C to allow the formation of complex between the phosphorylated biotinylated peptide and the detection reagents. Subsequently the amount of phosphorylated substrate was evaluated by measurement of the resonance energy transfer from the Eu-chelate to the streptavidine-XL. Therefore, the fluorescence emissions at 620 nm and 665 nm after excitation at 350 nm was measured in a HTRF reader, e.g. a Rubystar (BMG Labtechnologies, Offenburg, Germany) or a Viewlux (Perkin-Elmer). The ratio of the emissions at 665 nm and at 622 nm was taken as the measure for the amount of phosphorylated substrate. The data were normalised (enzyme reaction without inhibitor = 0 % inhibition, all other assay components but no enzyme = 100 % inhibition). Usually the test compounds were tested on the same microtiterplate in 11 different concentrations in the range of 20 µM to 0.1 nM (20 µM, 5.9 µM, 1.7 µM, 0.51 µM, 0.15 µM, 44 nM, 13 nM, 3.8 nM, 1.1 nM, 0.33 nM and 0.1 nM, the dilution series prepared separately before the assay on the level of the 1000-fold concentrated solutions in DMSO by serial 1:3.4 dilutions) in duplicate values for each concentration and IC₅₀ values were calculated by a 4 parameter fit using an inhouse software.
2a. CDK2/CycE kinase assay:

CDK2/CycE inhibitory activity of compounds of the present invention was quantified employing the CDK2/CycE TR-FRET assay as described in the following paragraphs:

Recombinant fusion proteins of GST and human CDK2 and of GST and human CycE, expressed in insect cells (Sf9) and purified by Glutathion-Sepharose affinity chromatography, were purchased from ProQinase GmbH (Freiburg, Germany). As substrate for the kinase reaction biotinylated peptide biotin-Tdts-YISPLKSPYKISEG (C-terminus in amid form) was used which can be purchased e.g. form the company JERINI Peptide Technologies (Berlin, Germany).

For the assay 50 nl of a 1000-fold concentrated solution of the test compound in DMSO was pipetted into a black low volume 384well microtiter plate (Greiner Bio-One, Frickenhausen, Germany), 2 µl of a solution of CDK2/CycE in aqueous assay buffer [50 mM Tris/HCl pH 8.0, 10 mM MgCh, 1.0 mM dithiothreitol, 0.1 mM sodium ortho-vanadate, 0.01% (v/v) Nonidet-P40 (Sigma)] were added and the mixture was incubated for 15 min at 22°C to allow pre-binding of the test compounds to the enzyme before the start of the kinase reaction. Then the kinase reaction was started by the addition of 3 µl of a solution of adenosine-tri-phosphate (ATP, 16.7 µM => final cone, in the 5 µl assay volume is 10 µM) and substrate (1.25 µM => final cone, in the 5 µl assay volume is 0.75 µM) in assay buffer and the resulting mixture was incubated for a reaction time of 25 min at 22°C. The concentration of CDK2/CycE was adjusted depending of the activity of the enzyme lot and was chosen appropriate to have the assay in the linear range, typical concentrations were in the range of 130 ng/mL. The reaction was stopped by the addition of 5 µl of a solution of TR-FRET detection reagents (0.2 µM streptavidine-XL665 [Cisbio Bioassays, Codolet, France] and 1 nM anti-RB(pSer807/pSer811)-antibody from BD Pharmingen [# 558389] and 1.2 nM LANCE EU-W1024 labeled anti-mouse IgG antibody [Perkin-Elmer, product no. AD0077]) in an aqueous EDTA-solution (100 mM EDTA, 0.2 % (w/v) bovine serum albumin in 100 mM HEPES/NaOH pH 7.0).

The resulting mixture was incubated 1 h at 22°C to allow the formation of complex between the phosphorylated biotinylated peptide and the detection reagents. Subsequently the amount of phosphorylated substrate was evaluated by measurement of the resonance energy transfer from the Euchelate to the streptavidine-XL. Therefore, the fluorescence emissions at 620 nm and 665 nm after excitation at 350 nm was measured in a TR-FRET reader, e.g. a Rubystar (BMG Labtechnologies, Offenburg, Germany) or a Viewlux (Perkin-Elmer). The ratio of the emissions at 665 nm and at 622 nm was taken as the measure for the amount of phosphorylated substrate. The data were normalised (enzyme reaction without inhibitor = 0 % inhibition, all other assay components but no enzyme = 100 % inhibition). Usually the test compounds were tested on the same microtiterplate in 11 different concentrations in the range of 20 µM to 0.1 nM (20 µM, 5.9 µM, 1.7 µM, 0.51 µM, 0.15 µM, 44 nM, 13 nM, 3.8 nM, 1.1 nM, 0.33 nM and 0.1 nM, the dilution series prepared separately before the assay on the level of the 100-fold concentrated solutions in DMSO by serial 1:3.4 dilutions) in duplicate values for each concentration and IC\textsubscript{50} values were calculated by a 4 parameter fit using an inhouse software.
2b. CDK2/CycE high ATP kinase assay:

CDK2/CycE -inhibitory activity of compounds of the present invention at 2 mM adenosine-tri-phosphate (ATP) was quantified employing the CDK2/CycE TR-FRET (TR-FRET = Time Resolved Fluorescence Energy Transfer) assay as described in the following paragraphs.

Recombinant fusion proteins of GST and human CDK2 and of GST and human CycE, expressed in insect cells (Sf9) and purified by Glutathion-Sepharose affinity chromatography, were purchase from ProQinase GmbH (Freiburg, Germany). As substrate for the kinase reaction biotinylated peptide biotin-Tds-YISPLKSPYKISEG (C-terminus in amid form) was used which can be purchased e.g. form the company JERINI peptide technologies (Berlin, Germany).

For the assay 50 µl of a 1000-fold concentrated solution of the test compound in DMSO was pipetted into a black low volume 384well microtiter plate (Greiner Bio-One, Frickenhausen, Germany), 2 µl of a solution of CDK2/CycE in aqueous assay buffer [50 mM Tris/HCl pH 8.0, 10 mM MgCl₂, 1.0 mM dithiothreitol, 0.1 mM sodium ortho-vanadate, 0.01% (v/v) Nonidet-P40 (Sigma)] were added and the mixture was incubated for 15 min at 22°C to allow pre-binding of the test compounds to the enzyme before the start of the kinase reaction. Then the kinase reaction was started by the addition of 3 µl of a solution ATP (3.33 mM => final cone, in the 5 µl assay volume is 2 mM) and substrate (1.25 µM => final cone, in the 5 µl assay volume is 0.75 µM) in assay buffer and the resulting mixture was incubated for a reaction time of 25 min at 22°C. The concentration of CDK2/CycE was adjusted depending of the activity of the enzyme lot and was chosen appropriate to have the assay in the linear range, typical concentrations were in the range of 15 ng/ml. The reaction was stopped by the addition of 5 µl of a solution of TR-FRET detection reagents (0.2 µM streptavidine-XL665 [Cisbio Bioassays, Codolet, France] and 1 nM anti-RB(pSer807/pSer811)-antibody from BD Pharmingen [# 558389] and 1.2 nM LANCE EU-W1024 labeled anti-mouse IgG antibody [Perkin-Elmer, product no. AD0077, as an alternative a Terbium-cryptate-labeled anti-mouse IgG antibody from Cisbio Bioassays can be used]) in an aqueous EDTA-solution (100 mM EDTA, 0.2 % (w/v) bovine serum albumin in 100 mM HEPES/NaOH pH 7.0).

The resulting mixture was incubated 1 h at 22°C to allow the formation of complex between the phosphorylated biotinylated peptide and the detection reagents. Subsequently the amount of phosphorylated substrate was evaluated by measurement of the resonance energy transfer from the Eu-chelate to the streptavidine-XL. Therefore, the fluorescence emissions at 620 nm and 665 nm after excitation at 350 nm were measured in a TR-FRET reader, e.g. a Rubystar (BMG Labtechnologies, Offenburg, Germany) or a Viewlux (Perkin-Elmer). The ratio of the emissions at 665 nm and at 622 nm was taken as the measure for the amount of phosphorylated substrate. The data were normalised (enzyme reaction without inhibitor = 0 % inhibition, all other assay components but no enzyme = 100 % inhibition). Usually the test compounds were tested on the same microtiterplate in 11 different concentrations in the range of 20 µM to 0.1 nM (20 µM, 5.9 µM, 1.7 µM, 0.51 µM, 0.15 µM, 44 nM, 13 nM, 3.8 nM, 1.1 nM, 0.33 nM and 0.1 nM, the dilution series prepared separately before the assay on the
level of the 100-fold concentrated solutions in DMSO by serial 1:3.4 dilutions) in duplicate values for each concentration and IC\textsubscript{50} values were calculated by a 4 parameter fit using an inhouse software.

3. Proliferation Assay:

Cultivated tumour cells (HeLa, human cervical tumour cells, ATCC CCL-2; NCI-H460, human non-small cell lung carcinoma cells, ATCC HTB-177; A2780, human ovarian carcinoma cells, ECACC # 93112519; DU 145, hormone-independent human prostate carcinoma cells, ATCC HTB-81; HeLa-MaTu-ADR, multidrug-resistant human cervical carcinoma cells, EPO-GmbH Berlin; Caco-2, human colorectal carcinoma cells, ATCC HTB-37; B16F10, mouse melanoma cells, ATCC CRL-6475) were plated at a density of 5,000 cells/well (DU145, HeLa-MaTu-ADR), 3,000 cells/well (NCI-H460, HeLa), 2,500 cells/well (A2780), 1,500 cells/well (Caco-2), or 1,000 cells/well (B16F10) in a 96-well multititer plate in 200 µl, of their respective growth medium supplemented 10% fetal calf serum. After 24 hours, the cells of one plate (zero-point plate) were stained with crystal violet (see below), while the medium of the other plates was replaced by fresh culture medium (200 µl), to which the test substances were added in various concentrations (0 µM, as well as in the range of 0.001-10 µM; the final concentration of the solvent dimethyl sulfoxide was 0.5%). The cells were incubated for 4 days in the presence of test substances. Cell proliferation was determined by staining the cells with crystal violet: the cells were fixed by adding 20 µl/measuring point of an 11% glutaraldehyde solution for 15 minutes at room temperature. After three washing cycles of the fixed cells with water, the plates were dried at room temperature. The cells were stained by adding 100 µl/measuring point of a 0.1% crystal violet solution (pH 3.0). After three washing cycles of the stained cells with water, the plates were dried at room temperature. The dye was dissolved by adding 100 µl/measuring point of a 10% acetic acid solution. The extinction was determined by photometry at a wavelength of 595 nm. The change of cell number, in percent, was calculated by normalization of the measured values to the extinction values of the zero-point plate (=0%) and the extinction of the untreated (0 µM) cells (=100%). The IC\textsubscript{50} values (inhibitory concentration at 50% of maximal effect) were determined by means of a 4 parameter fit.

Non-adherent MOLM-13 human acute myeloid leukemia cells (DSMZ ACC 554) were seeded at a density of 5,000 cells/well in a 96-well multititer plate in 100 µl of growth medium supplemented 10% fetal calf serum. After 24 hours, cell viability of one plate (zero-point plate) was determined with the Cell Titre-Glo Luminescent Cell Viability Assay (Promega), while 50 µl of test compound containing medium was added to the wells of the other plates (final concentrations in the range of 0.001-10 µM and DMSO controls; the final concentration of the solvent dimethyl sulfoxide was 0.5%). Cell viability was assessed after 72-hour exposure with the Cell Titre-Glo Luminescent Cell Viability Assay (Promega). IC\textsubscript{50} values (inhibitory concentration at 50% of maximal effect) were determined by means of a 4 parameter fit on measurement data which were normalized to vehicle (DMSO) treated cells (=100%) and measurement readings taken immediately before compound exposure (=0%).
Preparative Examples

General syntheses of compounds of the formula (I)

The syntheses of the 4-(benzofuran-7-yl)-substituted 5-fluoro-pyrimidine derivatives of formula (I) according to the present invention can be carried out according to schemes 1 and 2 below.

In addition to said routes described below, also other routes may be used to synthesise the target compounds, in accordance with common general knowledge of a person skilled in the art of organic synthesis. The order of transformations exemplified in the following Schemes is therefore not intended to be limiting, and suitable synthesis steps from various schemes can be combined to form additional synthesis sequences. In addition, interconversion of any of the substituents $R^1$, $R^2$, $R^3$ and/or $R^4$ can be achieved before and/or after the exemplified transformations. These modifications can be such as the introduction of protective groups, cleavage of protective groups, reduction or oxidation of functional groups, halogenation, metallation, metal catalysed coupling reactions, substitution or other reactions known to a person skilled in the art. These transformations include those which introduce a functionality allowing for further interconversion of substituents. Appropriate protective groups and their introduction and cleavage are well-known to a person skilled in the art (see for example T.W. Greene and P.G.M. Wuts in Protective Groups in Organic Synthesis, 4th edition, Wiley 2006). Specific examples are described in the subsequent paragraphs. Further, it is possible that two or more successive steps may be performed without work-up being performed between said steps, e.g. a "one-pot" reaction, as it is well-known to a person skilled in the art.

Scheme 1
In the first step, 2,4-dichloro-5-fluoropyrimidine (1; CAS-No. 2927-7 1-1) is reacted with a boronic acid derivative R²-B(OR)₂ of formula (2), in which R² is as defined for the compound of general formula (I), to give a compound of formula (3). The boronic acid derivative (2) may preferably be a boronic acid (R = -H), or, alternatively, an ester of said boronic acid, e.g. its isopropyl ester (R = -CH(CH₃)₂), or a cyclic ester derived from pinacol in which the -B(OR)₂ forms a -4,4,5,5-tetramethyl-1,3,2-dioxaborolane (R-R = -C(CH₃)₂-C(CH₃)₂-). Boronic acids and their esters are commercially available and well-known to the person skilled in the art; see e.g. D.G. Hall, Boronic Acids, 2005 WILEY-VCH Verlag GmbH & Co. KGaA, Weinheim, ISBN 3-527-30991-8 and references cited therein.

The coupling reaction is catalyzed by palladium catalysts, e.g. by Pd(0) catalysts such as tetrakis(triphenylphosphine)palladium(0) [Pd(PPh₃)₄], tris(dibenzyldieneacetone)di-palladium(0) [Pd₂(dba)₃], or by Pd(II) catalysts such as dichlorobis(triphenylphosphine)-palladium(II) [Pd(PPh₃)₂Cl₂], palladium(II) acetate and triphenylphosphine or by [[1,1’-bis(diphenylphosphino)ferrocene]palladium dichloride; preferably by 1,1’-bis(diphenylphosphino)ferrocenedichloropalladium(II)-dichloromethane.

The reaction is preferably carried out in a mixture of a solvent such as 1,2-dimethoxyethane, dioxane, DMF, THF, or isopropanol with water and in the presence of a base such as potassium carbonate, sodium bicarbonate or potassium phosphate.

In the following step, a compound of formula (3) is reacted in a coupling reaction with an aniline of formula (4), in which R¹, R³ and R⁴ are as defined for the general formula (I), to give a compound of formula (I).

Said coupling reaction can be carried out by a Palladium-catalyzed C-N cross-coupling reaction (for a review on C-N cross coupling reactions see for example: a) L. Jiang, S.L. Buchwald in 'Metal-Catalyzed Cross-Coupling Reactions', 2nd ed.: A. de Meijere, F. Diederich, Eds.: Wiley-VCH: Weinheim, Germany, 2004).

Preferred is the use of suitable palladium precatalysts based upon biarylmonophosphines which are easily activated and ensure the formation of the active mono-ligated Pd(0) complex (see for examples a) S.L. Buchwald et al, J. Am. Chem. Soc. 2008, 130, 6686; b) S.L. Buchwald et al, J. Am. Chem. Soc. 2008, 130, 13552). The reactions are run in the presence of a weak base at elevated temperatures (see for example: a) S.L: Buchwald et al, Tet. Lett. 2009, 50, 3672).

Particularly preferred is the herein described use of chloro(2-dicyclohexylphosphino-2’,4’,6’-tri-isopropyl-1,1’-biphenyl)[2-(2-aminoethyl)phenyl] palladium(II) methyl-tert-butylether adduct, 2-dicyclohexylphosphino-2’,4’,6’-triisopropylbiphenyl, potassium phosphate as a base, and a mixture of toluene and 1-methylpyrrolidin-2-one as a solvent. The reactions are preferably run under argon for 3-48 hours at an elevated temperature, for example 130°C, in a microwave oven or in an oil bath.

Alternatively, this coupling reaction can be carried out in an alcohol such as 1-butanol or in an inert solvent such as DMF, THF, DME, dioxane or mixtures of such solvents in the presence of an acid such as hydrogen chloride or 4-methylbenzenesulfonic acid. Preferably, the reaction is carried out at an elevated temperature, for example 140 °C.
Anilines of formula (4) are commercially available in certain cases, or can be prepared by methods known to the person skilled in the art, e.g. from the corresponding 3-aminobenzyl alcohol via conversion of the hydroxy group contained therein into a suitable leaving group, such as chloro or bromo, followed by nucleophilic displacement with a thiol of the general formula R^SH, in which R^1 is defined as defined for the compound of general formula (I), to give aniline intermediates of formula (5), for the structure see scheme 2, infra.

Said aniline intermediates of formula (5) can be converted into the corresponding sulfone-bearing anilines of formula (4) by oxidation. Typically, this oxidation is carried out with 3-chlorobenzencarboperoxoic acid (also known as mCPBA, meta-chlorobenzoic acid) in dichloromethane at temperatures between 0° C and 25 °C.

If needed, the amino group present in said 3-aminobenzyl alcohol can be protected by a suitable protecting group. Protecting groups for amino groups present in analogues and methods for their introduction and removal are well known to the person skilled in the art, see e.g. T.W. Greene and P.G.M. Wuts in: Protective Groups in Organic Synthesis, 4th edition, Wiley (2006). Likewise, a nitro group can serve as inert precursor group of said amino group, which is released upon reduction of the nitro precursor using methods well known to the person skilled in the art, such as reduction with titanium(III)chloride in aqueous hydrochloric acid.

Thiols of formula R^SH are known to the person skilled in the art and are commercially available in considerable variety.

The syntheses of the disubstituted 5-fluoro-pyrimidines of formula (I) according to the present invention can also be carried out according to an alternative synthetic sequence, shown in scheme 2.

In the first step, a compound of formula (3), which can be prepared according to scheme 1, is reacted in a coupling reaction with an aniline intermediate of formula (5), in which R^1, R^3 and R^4 are as defined for the general formula (I), to give a compound of formula (6).

Said coupling reaction can be carried out by a Palladium-catalyzed C-N cross-coupling reaction (for a review on C-N cross coupling reactions see for example: a) L. Jiang, S.L. Buchwald in 'Metal-Catalyzed Cross-Coupling Reactions', 2nd ed.: A. de Meijere, F. Diederich, Eds.: Wiley-VCH: Weinheim, Germany, 2004).

Preferred is the use of suitable palladium precatalysts based upon barylmonophosphines which are easily activated and ensure the formation of the active mono-ligated Pd(0) complex (see for examples a) S.L. Buchwald et al, J. Am. Chem. Soc. 2008, 130, 6686; b) S.L. Buchwald et al, J. Am. Chem. Soc. 2008, 130, 13552). The reactions are run in the presence of a weak base at elevated temperatures (see for example: a) S.L. Buchwald et al, Tetrahedron Lett. 2009, 50, 3672). Most preferred is the herein described use of chloro(2-dicyclohexylphosphino-2',4',6'-tri-isopropyl-1,1'-biphenyl)(2-(2-aminoethyl)phenyl] palladium(II) methyl-tert-butylether adduct, 2-dicyclohexylphosphino-2',4',6'-triisopropylbiphenyl, potassium phosphate as a base, and a mixture of toluene and 1-methylpyrrolidin-2-
one as a solvent. The reactions are preferably run under argon for 3-48 hours at an elevated temperature, for example 130°C, in a microwave oven or in an oil bath.

Another preferred variation is the use of tris(dibenzylideneacetone)dipalladium(0), (9,9-dimethyl-9H-xanthene-4,5-diyl)bis(diphenylphosphane) and and cesium carbonate in dioxane. The reactions are preferably run under argon for 3-48 hours at an elevated temperature, for example 130°C, in a microwave oven or in an oil bath.

\[
\begin{array}{c}
\text{Scheme 2} \\
\end{array}
\]

In the second step, the thioether moiety of the compound of formula (6) is oxidized to give the desired compounds of formula (I). The oxidation is carried out by the use of an oxidation agent in a suitable solvent. Preferred is the use of potassium permanganate in acetone, or the use of 3-chlorobenzencarboperoxoic acid in dichloromethane.
Preparation of compounds:

Abbreviations used in the description of the chemistry and in the Examples that follow are:

- CDCI₃ (deuterated chloroform)
- cHex (cyclohexane)
- d (doublet)
- DCM (dichloromethane)
- DIPEA (diisopropylethylamine)
- DME (1,2-dimethoxyethane)
- DMF (dimethylformamide)
- DMSO (dimethyl sulfoxide)
- eq (equivalent)
- ES (electrospray)
- EtOAc (ethyl acetate)
- EtOH (ethanol)
- iPrOH (iso-propanol)
- mCPBA (meta-chloroperoxybenzoic acid)
- MeCN (acetonitrile)
- MeOH (methanol)
- MS (mass spectrometry)
- NBS (N-bromosuccinimide)
- NMR (nuclear magnetic resonance)
- p (pentet)
- Pd(dppf)Cl₂ ([l,l'-bis(diphenylphosphino)ferrocene]dichloro palladium(II) complex with dichloromethane)
- iPrOH (iso-propanol)
- q (quartet)
- RT (room temperature)
- s (singlet)
- sat. aq. (saturated aqueous)
- S1O₂ (silica gel)
- TFA (trifluoroacetic acid)
- TFAA (trifluoroacetic anhydride)
- THF (tetrahydrofuran)
- tr (triplet)

The IUPAC names of the examples were generated using the program ’ACD/Name batch version 12.01’ from ACD LABS.

**Example 1: 5-Fluoro-4-(4-fluoro-1-benzofuran-7-yl)-N-{3-[((methylsulfonyl)methyl]-phenyl}pyrimidin-2-amine**

![Example 1 structure]

**Preparation of Intermediate 1.1: 1-[(Methylsulfanyl)methyl]-3-nitrobenzene**

Sodium methanethiolate (13.5 g; 192 mmol) was added in two portions to a stirred solution of 1-(chloromethyl)-3-nitrobenzene (30.0 g; 175 mmol) in ethanol (360 mL) at -15°C. The cold bath was removed and the batch was stirred at room temperature for 3 hours. The batch was diluted with brine and extracted twice with ethyl acetate. The combined organic layers were washed with water, dried (sodium sulfate), filtered and concentrated to give the desired product (32.2 g) which was used without further purification.

$\frac{3}{4}$ NMR (400MHz, CDCI₃) $\delta$ = 8.18 (m, 1H), 8.11 (m, 1H), 7.66 (m, 1H), 7.50 (m, 1H), 3.75 (s, 2H), 2.01 (s, 3H).
Preparation of Intermediate 1.2: 1-[(Methylsulfonyl)methyl]-3-nitrobenzene

3-Chlorobenzenecarboxylic acid (77%; 26.9 g; 120 mmol) was added to a stirred solution of 1-[(methylsulfonyl)methyl]-3-nitrobenzene (10.0 g) in DCM (1305 mL) at 0°C. The batch was stirred at 0°C for 30 minutes and then 2.5 hours at room temperature. The batch was diluted with water (300 mL) before sodium bicarbonate (11.0 g) was added. The batch was extracted twice with DCM. The combined organic layers were filtered using a Whatman filter and concentrated. The residue was purified by column chromatography on silica gel (DCM / ethanol 95:5) and finally recrystallized from ethyl acetate to give the desired product (6.2 g; 28.9 mmol).

\(^1\)H NMR (400 MHz, DMSO-d<6) δ = 8.28 (m, 1H), 8.22 (m, 1H), 7.83 (m, 1H), 7.69 (m, 1H), 4.68 (s, 2H), 2.93 (s, 3H).

Preparation of Intermediate 1.3: 3-[(Methylsulfonyl)methyl]aniline

Titanium(III)chloride solution (approx. 15%) in approx. 10% aqueous hydrochloric acid (162 mL; Merck Schuchardt OHG) was added to a stirred solution of 1-[(methylsulfonyl)methyl]-3-nitrobenzene (5.1 g; 23.8 mmol) in THF (250 mL) at room temperature and the batch was stirred for 16 hours. By adding IN aqueous sodium hydroxide solution the pH value of the reaction mixture was adjusted to 10 before the batch was extracted twice with ethyl acetate. The combined organic layers were washed with brine, filtered using a Whatman filter and concentrated to give the desired product (4.5 g) which was used without further purification.

\(^1\)H NMR (400 MHz, DMSO-d<5) δ = 6.97 (m, 1H), 6.51 (m, 3H), 5.13 (br, 2H), 4.23 (s, 2H), 2.83 (s, 3H).
Preparation of Intermediate 1.4: 2-Chloro-5-fluoro-4-(4-fluoro-1-benzofuran-7-yl)pyrimidine

A batch with 2,4-dichloro-5-fluoropyrimidine (818 mg; 4.90 mmol; Aldrich Chemical Company Inc.), (4-fluoro-1-benzofuran-7-yl)boronic acid (1 g; 5.39 mmol; ABCR GmbH & Co. KG) and 1,1'-bis(diphenylphosphino)ferrocenedichloropalladium(II)-dichlormethane (400.2 mg; 0.49 mmol) in 1,2-dimethoxyethane (25.4 mL) and 2 M aqueous solution of potassium carbonate (7.35 mL) was degassed using argon. The batch was stirred under an atmosphere of argon for 90 minutes at ambient temperature.

The batch was diluted with ethyl acetate and washed with brine. The organic layer was dried over sodium sulfate, filtered and concentrated. The residue was purified by column chromatography on silica gel (hexanes / ethyl acetate) to give the desired product (834 mg; 3.13 mmol).

¾ NMR (400MHz, DMSO-A) δ = 9.06 (d, 1H), 8.21 (d, 1H), 7.78 (dd, 1H), 7.38-7.32 (m, 1H), 7.25 (d, 1H).

Preparation of end product:

A mixture of 3-[(methylsulfonyl)methyl] aniline (105 mg; 0.563 mmol; Intermediate 1.3), 2-chloro-5-fluoro-4-(4-fluoro-1-benzofuran-7-yl)pyrimidine (100 mg; 0.375 mmol; Intermediate 1.4), chloro(2-dicyclohexylphosphino-2',4',6'-tri-isopropyl-1,1'-biphenyl)[2-(2-aminoethyl)phenyl]palladium(II) methyl-tert-butylether adduct (23.2 mg; 0.028 mmol; ABCR GmbH & Co. KG) and 2-(dicyclohexylphosphino)-2',4',6'-triisopropylbiphenyl (13.4 mg; 0.028 mmol; Aldrich Chemical Company Inc.) and potassium phosphate (398 mg; 1.87 mmol) in toluene (8 mL) and NMP (2 mL) was stirred under an atmosphere of argon at 130°C for 3 hours. After cooling, the batch was diluted with ethyl acetate and washed with aqueous sodium chloride solution. The organic layer was filtered using a Whatman filter and concentrated. The residue was purified by preparative HPLC to give the desired product (9.1 mg; 0.02 mmol).

\]

Preparation of Intermediate 2.1: 1-[(Ethylsulfanyl)methyl]-3-nitrobenzene

Sodium ethanethiolate (5.39 g; 64.1 mmol) was added in two portions to a stirred solution of 1-(chloromethyl)-3-nitrobenzene (10.0 g; 58.2 mmol) in ethanol (120 mL) at -15°C. The cold bath was removed and the batch was stirred at room temperature for 3 hours. Additional sodium ethanethiolate (2.45 g; 29.1 mmol) was added. The batch was stirred for 16 hours. Then, the batch was diluted with brine and extracted twice with ethyl acetate. The combined organic layers were washed with water, dried (sodium sulfate), filtered and concentrated to give the desired product (10.15 g; 51.4 mmol) which was used without further purification.

\[
\delta = 8.20 (t, 1H), 8.11 (dt, 1H), 7.68 (d, 1H), 7.54-7.46 (m, 1H), 3.81 (s, 2H), 2.46 (q, 2H), 1.25 (t, 3H).
\]
Preparation of Intermediate 2.2: 1-[(Ethylsulfonyl)methyl]-3-nitrobenzene

3-Chlorobenzenecarboxylic acid (77%; 1.98 g; 8.03 mmol) was added to a stirred solution of 1-[(ethylsulfanyl)methyl]-3-nitrobenzene (800 mg; Intermediate 2.1) in DCM (70 mL) at 0°C. The batch was stirred at 0°C for 30 minutes and then 18 hours at room temperature. The batch was diluted with water (100 mL) before sodium bicarbonate (735 mg) was added. The batch was extracted twice with DCM. The combined organic layers were dried over sodium sulfate, filtered and concentrated. The residue was purified by column chromatography on silica gel (hexanes / ethyl acetate) to give the desired product (824 mg; 3.59 mmol).

^1H NMR (400 MHz, DMSO-<&) δ = 8.31 (t, 1H), 8.28-8.22 (m, 1H), 7.86 (d, 1H), 7.75-7.68 (m, 1H), 4.70 (s, 2H), 3.09 (q, 2H), 1.24 (t, 3H).

Preparation of Intermediate 2.3 : 3-[(Ethylsulfonyl)methyl]aniline

Titanium(III)chloride solution (approx. 15%) in approx. 10% aqueous hydrochloric acid (16.5 mL; Merck Schuchardt OHG) was added to a stirred solution of 1-[(ethylsulfanyl)methyl]-3-nitrobenzene (810 mg; 3.53 mmol; Intermediate 2.2) in THF (42 mL) at room temperature and the batch was stirred for 67 hours. By adding IN aqueous sodium hydroxide solution the reaction mixture was neutralized before the batch was extracted twice with ethyl acetate. The combined organic layers were washed with brine, dried over sodium sulfate, filtered and concentrated. The residue was purified by column chromatography on silica gel (hexanes / ethyl acetate) to give the desired product (560 mg; 2.67 mmol).

^1H NMR (400 MHz, DMSO-<&) δ = 7.00 (t, 1H), 6.62-6.48 (m, 3H), 5.14 (s, 2H), 4.24 (s, 2H), 2.97 (q, 2H), 1.20 (t, 3H).
Preparation of end product:
A mixture of 3-[(ethylsulfonyl)methyl]aniline (106 mg; 0.5 mmol; Intermediate 2.3), 2-chloro-5-fluoro-4-(4-fluoro-1-benzofuran-7-yl)pyrimidine (90 mg; 0.338 mmol; Intermediate 1.4), chloro(2-dicyclohexylphosphino-2',4',6'-tri-isopropyl-1,1'-biphenyl)2-(2-aminoethyl)phenyl palladium(II) methyl-tert-butoxy adduct (20.9 mg; 0.025 mmol; ABCR GmbH & Co. KG) and 2-(dicyclohexylphosphino)-2',4',6'-triisopropylbiphenyl (12.1 mg; 0.025 mmol; Aldrich Chemical Company Inc.) and potassium phosphate (358 mg; 1.68 mmol) in toluene (7.2 ml) and NMP (1.8 mL) was stirred under an atmosphere of argon at 130°C for 3 hours. After cooling, the batch was diluted with ethyl acetate and washed with aqueous sodium chloride solution. The organic layer was filtered using a Whatman filter and concentrated. The residue was purified by preparative HPLC to give the desired product (37.5 mg; 0.09 mmol).

¾ NMR (400 MHz, DMSO-δ) δ = 9.95 (s, 1H), 8.72 (d, 1H), 8.20 (d, 1H), 7.85 (d, 1H), 7.82-7.76 (m, 2H), 7.35-7.28 (m, 2H), 7.23 (d, 1H), 7.00 (d, 1H), 4.38 (s, 2H), 3.00 (q, 2H), 1.18 (t, 3H).

**Example 3:** 5-Fluoro-4-(4-fluoro-1-benzofuran-7-yl)-N-[3-fluoro-5-[(methylsulfonyl)methyl]phenyl]pyrimidin-2-amine
Preparation of Intermediate 3.1: 1-Fluoro-3-[(methylsulfanyl)methyl]-5-nitrobenzene

Sodium methanethiolate (1.22 g; 17.4 mmol) was added in three portions to a stirred solution of 1-(chloromethyl)-3-fluoro-5-nitrobenzene (3.00 g; 15.8 mmol, HE Chemical) in ethanol (33 mL) at 0°C. The ice bath was removed and the batch was stirred at room temperature for 18 hours. Further sodium methanethiolate (0.33 g; 4.7 mmol) was added and the batch was stirred for additional 5 hours at room temperature. The batch was diluted with brine and extracted twice with ethyl acetate. The combined organic layers were washed with water, dried (sodium sulfate), filtered and concentrated to give the desired product (3.4 g) which was used without further purification.

$^3$H NMR (400MHz, CDCl$_3$) $\delta$ = 8.00 (m, 1H), 7.81 (m, 1H), 7.42 (m, 1H), 3.74 (s, 2H), 2.02 (s, 3H).

Preparation of Intermediate 3.2: 1-Fluoro-3-[(niethylsulfonyl)methyl]-5-nitrobenzene

3-Chlorobenzenecarboxylic acid (77%; 3.68 g; 16.4 mmol) was added to a stirred solution of 1-fluoro-3-[(methylsulfanyl)methyl]-5-nitrobenzene (1.50 g) in DCM (178 mL) at 0°C. The batch was stirred at 0°C for 30 minutes and then 2.5 hours at room temperature. The batch was diluted with water (450 mL) before sodium bicarbonate (1.50 g) was added. The batch was extracted twice with DCM. The combined organic layers were filtered using a Whatman filter and concentrated to give the crude product (3.33 g) which was used without further purification.

Preparation of Intermediate 3.3: 3-Fluoro-5-[(niethylsulfonyl)methyl]aniline
Titanium(III)chloride solution (approx. 15%) in approx. 10% aqueous hydrochloric acid (29 mL, Merck Schuchardt OHG) was added to a stirred solution of crude 1-fluoro-3-[[(methylsulfonyl)methyl]-5-nitrobenzene (1.00 g) in THF (45 mL) at room temperature and the batch was stirred for 16 hours. The batch was cooled with an ice bath while 1N aqueous sodium hydroxide solution was added to adjust the pH value of the reaction mixture to 8-9. Stirring was continued for another 30 minutes at this temperature before the batch was extracted twice with ethyl acetate. The combined organic layers were washed with brine, filtered using a Whatman filter and concentrated. The residue was purified by column chromatography (hexane / ethyl acetate 1:1 to ethyl acetate) to give the desired product (262 mg; 1.29 mmol).

\[ ^1H \text{NMR (400MHz, CDCl}_3, 300K) \delta = 6.48 \text{ (m, 2H), 6.39 (m, 1H), 4.11 (s, 2H), 3.88 (br, 2H), 2.79 (s, 3H). } \]

Preparation of end product:

A mixture of 3-fluoro-5-[(methylsulfonyl)methyl]aniline (118 mg; 0.506 mmol; Intermediate 3.3), 2-chloro-5-fluoro-4-(4-fluoro-1-benzofuran-7-yl)pyrimidine (90 mg; 0.338 mmol; Intermediate 1.4), chloro(2-dicyclohexylphosphino-2',4',6'-tri-isopropyl-1,1'-biphenyl)[2-(2-aminoethyl)phenyl]palladium(II) methyl-tert-butylether adduct (20.9 mg; 0.025 mmol; ACRB GmbH & Co. KG) and 2-(dicyclohexylphosphino)-2',4',6'-triisopropylbiphenyl (12.1 mg; 0.025 mmol; Aldrich Chemical Company Inc.) and potassium phosphate (358 mg; 1.68 mmol) in toluene (7.2 ml) and NMP (1.8 mL) was stirred under an atmosphere of argon at 130°C for 3 hours. After cooling, the batch was diluted with ethyl acetate and washed with aqueous sodium chloride solution. The organic layer was filtered using a Whatman filter and concentrated. The residue was purified by preparative HPLC to give the desired product (65 mg; 0.15 mmol).

5-Fluoro-4-(4-fluoro-benzofuran-7-yl)-N-{3-methyl-5-[(methylsulfonyl)methyl]-phenyl}pyrimidin-2-amine

Preparation of Intermediate 4.1:
3-(Chloromethyl)-5-methylaniline

To a stirred solution of 3-amino-5-methyl-benzyl alcohol (5 g; 33.9 mmol; GL Syntech LLC, Hatfield, PA) in DCM (140 mL) at 0 °C was added dropwise thionyl chloride (7.4 mL; 102 mmol). The mixture was allowed to react at room temperature overnight. Then, the mixture was concentrated under reduced pressure. The resulting material was dissolved in DCM again and evaporated to dryness to give crude 3-(chloromethyl)-5-methylaniline (7 g).

Preparation of Intermediate 4.2:
3-Methyl-5-[(methylsulfanyl)methyl]aniline

Intermediate 4.2 was prepared under similar conditions as described in the preparation of Intermediate 1.1 using 3-(chloromethyl)-5-methylaniline (Intermediate 4.1).

¾ NMR (400MHz, DMSO-*) δ = 6.33-6.27 (m, 1H), 6.27-6.21 (m, 2H), 4.95 (s, 2H), 3.47 (s, 2H), 2.12 (s, 3H), 1.94 (s, 3H).
Preparation of Intermediate 4.3:
5-Fluoro-4-(4-fluoro-1-benzofuran-7-yl)-N-{3-methyl-5-[(methylsulfanyl)methyl]phenyl}pyrimidin-2-amine

Intermediate 4.3 was prepared under similar conditions as described in the preparation of Example 1 (end product) using 2-chloro-5-fluoro-4-(4-fluoro-1-benzofuran-7-yl)pyrimidine (Intermediate 1.4) and 3-methyl-5-[(methylsulfanyl)methyl]aniline (Intermediate 4.2). The batch was purified by column chromatography on silica gel (hexanes / ethyl acetate) to give the title compound.

³¹ NMR (400MHz, DMSO-de) δ = 9.77 (s, 1H), 8.71 (d, 1H), 8.20 (d, 1H), 7.76 (dd, 1H), 7.60 (s, 1H), 7.50 (s, 1H), 7.33 (dd, 1H), 7.23 (d, 1H), 6.71 (s, 1H), 3.59 (s, 2H), 2.25 (s, 3H), 1.94 (s, 3H).

Preparation of end product:
Potassium permanganate (110.5 mg; 0.69 mmol) was added to a stirred solution of 5-fluoro-4-(4-fluoro-1-benzofuran-7-yl)-N-{3-methyl-5-[(methylsulfanyl)methyl]phenyl}pyrimidin-2-amine (88 mg; 0.22 mmol; Intermediate 4.3) in acetone (4 mL). The batch was stirred at 40 °C for 90 minutes. After cooling the reaction mixture was filtered through a pad of Celite. The filter pad was washed with acetone and the combined filtrates were evaporated under reduced pressure. The resulting residue was purified by preparative HPLC to give the desired product (20.6 mg; 0.048 mmol).

³¹ NMR (400MHz, DMSO-d₆) δ = 9.87 (s, 1H), 8.71 (d, 1H), 8.20 (d, 1H), 7.78 (dd, 1H), 7.64 (s, 2H), 7.35-7.29 (m, 1H), 7.23 (d, 1H), 6.82 (s, 1H), 4.36 (s, 2H), 2.89 (s, 3H), 2.28 (s, 3H).
The following Table 1 provides an overview on the compounds described in the example section:

**Results:**

Table 2: Inhibition for CDK9 and CDK2 of compounds according to the present invention

The IC<sub>50</sub> (inhibitory concentration at 50% of maximal effect) values are indicated in nM, "n.t." means that the compounds have not been tested in this assay.

©: Example Number

◎: CDK9: CDK9/CyclinT1 kinase assay as described under Method 1a. of Materials and Methods

◎: CDK2: CDK2/CyclinE kinase assay as described under Method 2a. of Materials and Methods

◎: Selectivity CDK9 over CDK2: IC<sub>50</sub> (CDK2) / IC<sub>50</sub> (CDK9) according to Methods 1a. and 2a. of Materials and Methods

◎: high ATP CDK9: CDK9/CyclinT1 kinase assay as described under Method 1b. of Materials and Methods

◎: high ATP CDK2: CDK2/CyclinE kinase assay as described under Method 2b. of Materials and Methods

◎: Selectivity high ATP CDK9 over high ATP CDK2: IC<sub>50</sub> (high ATP CDK2) / IC<sub>50</sub> (high ATP CDK9) according to Methods 1b. and 2b. of Materials and Methods

Table 3a and 3b: Inhibition of proliferation of HeLa, HeLa-MaTu-ADR, NCI-H460, DU145, Caco-2, B16F10, A2780 and MOLM-13 cells (for corresponding indications see table 3a) by compounds according to the present invention, determined as described under Method 3. of Materials and Methods. All IC_{50} (inhibitory concentration at 50% of maximal effect) values are indicated in nM. "n.t." means that the compounds have not been tested in this assay.

10 Example Number

15 Inhibition of HeLa cell proliferation

Inhibition of HeLa-MaTu-ADR cell proliferation

Inhibition of NCI-H460 cell proliferation

Inhibition of DU 145 cell proliferation

Inhibition of Caco-2 cell proliferation

Inhibition of B16F10 cell proliferation

Inhibition of A2780 cell proliferation

Inhibition of MOLM-13 cell proliferation

Said cell lines represent the following indications as shown in table 3a:

Patent claims

I. A compound of general formula (I)

\[ \text{R}^1 \text{ represents a group selected from } \text{C}_1-\text{C}_6-\text{alkyl}-, \text{C}_3-\text{C}_7-\text{cycloalkyl}-, \text{heterocycl}-, \text{phenyl}-, \text{heteroaryl}-, \text{phenyl -C}_3-\text{alkyl- and heteroaryl -C}_3-\text{alkyl-}, \]
\[ \text{wherein said group is optionally substituted with one or two or three substituents, identically or differently, selected from the group of hydroxy, cyano, halogen, halo-C}_3-\text{alkyl-, C}_6-\text{alkoxy-, C}_3-\text{fluoroalkoxy-, -NH}_2-, \text{alkylamino-, dialkylamino-, acetylamino-, N-methyl-N-acetylamino-, cyclic amines, -OP(O)(OH)_2, -C(O)OH, -C(O)NH}_2; } \]
\[ \text{R}^2 \text{ represents the group } \]

\[ \text{R}^3, \text{R}^4 \text{ represent, independently from each other, a group selected from a hydrogen atom, fluoro atom, chloro atom, bromo atom, cyano, -SF5, C}_3-\text{alkyl-, C}_3-\text{alkoxy-, halo-C}_3-\text{alkyl-, C}_1-\text{C}_3-\text{fluoroalkoxy-}; } \]
\[ \text{R}^{\text{sa}}, \text{R}^{\text{sb}} \text{ represent, independently from each other, a group selected from a hydrogen atom, fluoro atom, chloro atom, bromo atom, cyano, C}_3-\text{alkyl-, C}_3-\text{alkoxy-, halo-C}_3-\text{alkyl-, C}_3-\text{fluoroalkoxy-}; } \]
\[ \text{R}^6, \text{R}^7 \text{ represent, independently from each other, a group selected from a hydrogen atom, fluoro atom, chloro atom, C}_3-\text{alkyl-, C}_3-\text{alkoxy-, halo-C}_3-\text{alkyl-, C}_3-\text{fluoroalkoxy-}; } \]
and the salts, solvates or salts of solvates thereof.
2. The compound of general formula (I) according to claim 1, wherein
   \( R^1 \) represents a group selected from \( \text{Ci-C6-alkyl-} \), \( \text{Cs-Cs-cycloalkyl-} \),
   wherein said group is optionally substituted with one substituent selected from the group
   of hydroxy, halo-Ci-C \(_2\)-alkyl-, \( \text{Ci-C3-alkoxy-} \), \( \text{Ci-C2-fluoroalkoxy-} \), \( \text{-NH}_2 \), alkylamino-, dialkylamino-, cyclic amines, \( \text{-OP(0)(OH)} \), \( \text{-C(0)OH} \), \( \text{-C(0)NH}_2 \);
   \( R^2 \) represents the group

   \[ \begin{array}{c}
   R^3 \\
   \end{array} \]

   \( R^3 \) represents a hydrogen atom, a fluoro atom or chloro atom, a \( \text{-SF}_5 \) group, a \( \text{Ci-C3-alkyl-} \) group
   or a fluoro-Ci-C3-alkyl- group;
   \( R^4 \) represents a hydrogen atom or a fluoro atom;
   \( \text{R}^{5a}, \text{R}^{5b} \) represent, independently from each other, a group selected from a hydrogen atom, fluoro atom,
   chloro atom, bromo atom, cyano, \( \text{Ci-C3-alkyl-} \), \( \text{Ci-C3-alkoxy-} \), halo-Ci-C3-alkyl-,
   \( \text{Ci-C3-fluoroalkoxy-} \);
   \( R^6, R^7 \) represent, independently from each other, a group selected from a hydrogen atom, fluoro atom,
   chloro atom, \( \text{Ci-C3-alkyl-} \), \( \text{Ci-C3-alkoxy-} \), halo-Ci-C3-alkyl-,
   \( \text{Ci-C3-fluoroalkoxy-} \);

3. The compound of general formula (I) according to claim 1, wherein
   \( R^1 \) represents a group selected from \( \text{Ci-C6-alkyl-} \), \( \text{Cs-Cs-cycloalkyl-} \),
   wherein said group is optionally substituted with one substituent selected from the group
   of hydroxy, \( \text{Ci-C3-alkoxy-} \), \( \text{-NH}_2 \), alkylamino-, dialkylamino-, cyclic amines,
   \( \text{-OP(0)(OH)} \);
   \( R^2 \) represents the group

   \[ \begin{array}{c}
   R^3 \\
   \end{array} \]

   \( R^3 \) represents a hydrogen atom, fluoro atom or chloro atom, a \( \text{-SF}_5 \) group, a \( \text{Ci-C3-alkyl-} \) group
   or a fluoro-Ci-C3-alkyl- group;
   \( R^4 \) represents a hydrogen atom or a fluoro atom;
$R^5, R^6$ represent, independently from each other, a group selected from a hydrogen atom, fluoro atom, chloro atom, bromo atom, cyano, methyl-, methoxy-, halomethyl-, fluoromethoxy-;  

$R^5, R^7$ represent, independently from each other, a group selected from a hydrogen atom, a fluoro atom and a chloro atom;

and the salts, solvates or salts of solvates thereof.

4. The compound of general formula (I) according to claim 1, wherein

$R^1$ represents a Ci-C6-alkyl- group, wherein said group is optionally substituted with one substituent, selected from the group of Ci-C3-alkoxy, -NH$_2$, alkylamino-, dialkylamino-, and cyclic amines;

$R^2$ represents the group

![Chemical Structure](image1)

$R^3$ represents a hydrogen atom, fluoro atom or chloro atom or a -SF$_5$, methyl-, ethyl- or trifluoro methyl- group;

$R^4$ represents a hydrogen atom or fluoro atom;

$R^5, R^7$ represent, independently from each other, a group selected from a hydrogen atom, fluoro atom and a chloro atom;

and the salts, solvates or salts of solvates thereof.

5. The compound of general formula (I) according to claim 1, wherein

$R^1$ represents a Ci-C3-alkyl- group;

$R^2$ represents the group

![Chemical Structure](image2)

$R^3$ represents a hydrogen atom or fluoro atom or a methyl- group;

$R^4$ represents a hydrogen atom;

$R^6$ represents a group selected from a hydrogen atom and a fluoro atom,

$R^7$ represents a hydrogen atom;

and the salts, solvates or salts of solvates thereof.
6. The compound of general formula (I) according to any one of claim 1 to 5, wherein
   \( R^2 \) represents the group
   
   ![Chemical Structure]
   
   and the salts, solvates or salts of solvates thereof.

5

7. The compound of general formula (I) according to any one of claim 1 to 6, wherein
   \( R^3 \) represents a hydrogen atom or fluoro atom or a methyl group; and
   \( R^4 \) represents a hydrogen atom;
   and the salts, solvates or salts of solvates thereof.

10

8. The compound of general formula (I) according to claim 1, wherein
   \( R^1 \) represents a methyl- or an ethyl- group;
   \( R^2 \) represents the group
   
   ![Chemical Structure]
   
   \( R^3 \) represents a hydrogen atom or fluoro atom or a methyl- group;
   \( R^4 \) represents a hydrogen atom;
   and the salts, solvates or salts of solvates thereof.

9. The compound according to claim 1, which is selected from

20
   • 5-Fluoro-4-(4-fluoro-1-benzofuran-7-yl)-N-3-{[(methylsulfonyl)methyl]phenyl} pyrimidin-2-amine;
   • N-[3-{(Ethylsulfonyl)-methyl}phenyl]-5-fluoro-4-(4-fluoro-1-benzofuran-7-yl)pyrimidin-2-amine;
   • 5-Fluoro-4-(4-fluoro-1-benzofuran-7-yl)-N-[3-fluoro-5-{(methylsulfonyl)-methyl}phenyl] pyrimidin-2-amine, and
   • 5-Fluoro-4-(4-fluoro-1-benzofuran-7-yl)-N-[3-methyl-5-{(methylsulfonyl)methyl}-phenyl]pyrimidin-2-amine;
   and the salts, solvates or salts of solvates thereof.
10. A compound of general formula (I) according to any one of claims 1 to 9 for the use of treating and/or prophylaxis of hyper-proliferative disorders, virally induced infectious diseases and/or of cardiovascular diseases.

11. A compound of general formula (I) according to any one of claims 1 to 9 for the use of treating and/or prophylaxis of melanomas, cervical carcinomas, lung carcinomas, ovarian carcinomas, prostate carcinomas, colorectal carcinomas or leukemias.

12. Use of a compound of general formula (I) according to any one of claims 1 to 9 in the manufacture of a medicament for the treatment and/or prophylaxis of hyper-proliferative disorders, virally induced infectious diseases and/or of cardiovascular diseases.

13. Use of a compound of general formula (I) according to any one of claims 1 to 9 in the manufacture of a medicament for the treatment and/or prophylaxis of lung carcinomas, prostate carcinomas, cervical carcinomas, colorectal carcinomas, melanomas, ovarian carcinomas or leukemias.

14. Use of a compound of general formula (I) according to any one of claims 1 to 9 in the manufacture of a medicament for the treatment and/or prophylaxis of non-small cell lung carcinomas, hormone-independent human prostate carcinomas, cervical carcinomas, multidrug-resistant human cervical carcinomas, colorectal carcinomas, melanomas, ovarian carcinomas or acute myeloid leukemias.

15. A pharmaceutical combination comprising a compound according to any one of claims 1 to 9 in combination with at least one or more further active ingredients.

16. A pharmaceutical composition comprising a compound according to any one of claims 1 to 9 in combination with an inert, nontoxic, pharmaceutically suitable adjuvant.

17. The pharmaceutical combination according to claim 15 for the treatment and/or prophylaxis of hyper-proliferative disorders, virally induced infectious diseases and/or of cardiovascular diseases.

18. The pharmaceutical composition according to claim 16 for the treatment and/or prophylaxis of hyper-proliferative disorders, virally induced infectious diseases and/or of cardiovascular diseases.
19. A compound of general formula (6)

![Chemical Structure](image)

wherein $R_1$, $R_2$, $R_3$ and $R_4$ are as defined according to any one of claims 1 to 8 for the compounds of general formula (I), and the salts, solvates or salts of solvates thereof.

20. Use of a compound of general formula (6)

![Chemical Structure](image)

wherein $R_1$, $R_2$, $R_3$ and $R_4$ are as defined according to any one of claims 1 to 8 for the compounds of general formula (I), and the enantiomers, diastereomers, salts, solvates or salts of solvates thereof, for the preparation of a compound of general formula (I).
