(54) Title: PYRROLOBENZODIAZEPINES AND CONJUGATES THEREOF

A

(A1)

(A2)

(57) Abstract: A conjugate of formula (A): Wherein Y is se-
lected from formulae A1 and A2: Z¹ is a C₁₋₃ alkylene group;
Z² is a C₁₋₃ alkylene group; Q is: where Q^x is such that Q
is an amino-acid residue, a dipeptide residue or a tripeptide
residue; L is a linker connected to a cell binding agent; CBA
is the cell binding agent; and n is an integer between 0 and
48.

PYRROLOBENZODIAZEPINES AND CONJUGATES THEREOF

The present invention relates to pyrrolobenzodiazepines (PBDs), in particular pyrrolobenzodiazepines having a linker group connected to a cell binding agent.

5

Background to the invention

Pyrrolobenzodiazepines

Some pyrrolobenzodiazepines (PBDs) have the ability to recognise and bond to specific sequences of DNA; the preferred sequence is PuGpu. The first PBD antitumour antibiotic, anthramycin, was discovered in 1965 (Leimgruber, *et al.*, *J. Am. Chem. Soc.*, **87**, 5793-5795 (1965); Leimgruber, *et al.*, *J. Am. Chem. Soc.*, **87**, 5791-5793 (1965)). Since then, a number of naturally occurring PBDs have been reported, and over 10 synthetic routes have been developed to a variety of analogues (Thurston, *et al.*, *Chem. Rev.* **1994**, 433-465 (1994); Antonow, D. and Thurston, D.E., *Chem. Rev.* **2011** 111 (4), 2815-2864). Family members include abbeymycin (Hochlowski, *et al.*, *J. Antibiotics*, **40**, 145-148 (1987)), chicamycin (Konishi, *et al.*, *J. Antibiotics*, **37**, 200-206 (1984)), DC-81 (Japanese Patent 58-180 487; Thurston, *et al.*, *Chem. Brit.*, **26**, 767-772 (1990); Bose, *et al.*, *Tetrahedron*, **48**, 751-758 (1992)), mazethramycin (Kuminoto, *et al.*, *J. Antibiotics*, **33**, 665-667 (1980)), neothramycins A and B (Takeuchi, *et al.*, *J. Antibiotics*, **29**, 93-96 (1976)), porothramycin (Tsunakawa, *et al.*, *J. Antibiotics*, **41**, 1366-1373 (1988)), prothracarcin (Shimizu, *et al.*, *J. Antibiotics*, **29**, 2492-2503 (1982); Langley and Thurston, *J. Org. Chem.*, **52**, 91-97 (1987)), sibanomicin (DC-102)(Hara, *et al.*, *J. Antibiotics*, **41**, 702-704 (1988); Itoh, *et al.*, *J. Antibiotics*, **41**, 1281-1284 (1988)), sibiromycin (Leber, *et al.*, *J. Am. Chem. Soc.*, **110**, 2992-2993 (1988)) and tomamycin (Arima, *et al.*, *J. Antibiotics*, **25**, 437-444 (1972)). PBDs are of the general structure:

25

They differ in the number, type and position of substituents, in both their aromatic A rings and pyrrolo C rings, and in the degree of saturation of the C ring. In the B-ring there is either an imine (N=C), a carbinolamine(NH-CH(OH)), or a carbinolamine methyl ether (NH-CH(OMe)) at the N10-C11 position which is the electrophilic centre responsible for alkylating

30

DNA. All of the known natural products have an (S)-configuration at the chiral C11a position which provides them with a right-handed twist when viewed from the C ring towards the A ring. This gives them the appropriate three-dimensional shape for isohelicity with the minor groove of B-form DNA, leading to a snug fit at the binding site (Kohn, In *Antibiotics III*.

- 5 Springer-Verlag, New York, pp. 3-11 (1975); Hurley and Needham-VanDevanter, *Acc. Chem. Res.*, **19**, 230-237 (1986)). Their ability to form an adduct in the minor groove, enables them to interfere with DNA processing, hence their use as antitumour agents.

A particularly advantageous pyrrolobenzodiazepine compound is described by Gregson *et al.* (*Chem. Commun.* **1999**, 797-798) as compound **1**, and by Gregson *et al.* (*J. Med. Chem.* **2001**, *44*, 1161-1174) as compound **4a**. This compound, also known as SJG-136, is shown below:

- 15 Other dimeric PBD compounds, such as those bearing C2 aryl substituents in WO 2005/085251, have been disclosed, an example being:

These compounds have been shown to be highly useful cytotoxic agents.

Antibody-drug conjugates

- Antibody therapy has been established for the targeted treatment of patients with cancer, immunological and angiogenic disorders (Carter, P. (2006) *Nature Reviews Immunology* 6:343-357). The use of antibody-drug conjugates (ADC), i.e. immunoconjugates, for the local delivery of cytotoxic or cytostatic agents, i.e. drugs to kill or inhibit tumor cells in the treatment of cancer, targets delivery of the drug moiety to tumors, and intracellular accumulation therein, whereas systemic administration of these unconjugated drug agents may result in unacceptable levels of toxicity to normal cells as well as the tumor cells sought to be eliminated (Xie *et al* (2006) *Expert. Opin. Biol. Ther.* 6(3):281-291; Kovtun *et al* (2006)

Cancer Res. 66(6):3214-3121; Law *et al* (2006) *Cancer Res.* 66(4):2328-2337; Wu *et al* (2005) *Nature Biotech.* 23(9):1137-1145; Lambert J. (2005) *Current Opin. in Pharmacol.* 5:543-549; Hamann P. (2005) *Expert Opin. Ther. Patents* 15(9):1087-1103; Payne, G. (2003) *Cancer Cell* 3:207-212; Trail *et al* (2003) *Cancer Immunol. Immunother.* 52:328-337;
5 Syrigos and Epenetos (1999) *Anticancer Research* 19:605-614).

Maximal efficacy with minimal toxicity is sought thereby. Efforts to design and refine ADC have focused on the selectivity of monoclonal antibodies (mAbs) as well as drug mechanism of action, drug-linking, drug/antibody ratio (loading), and drug-releasing properties (Junutula,
10 *et al.*, 2008b *Nature Biotech.*, 26(8):925-932; Dornan *et al* (2009) *Blood* 114(13):2721-2729; US 7521541; US 7723485; WO2009/052249; McDonagh (2006) *Protein Eng. Design & Sel.* 19(7): 299-307; Doronina *et al* (2006) *Bioconj. Chem.* 17:114-124; Erickson *et al* (2006) *Cancer Res.* 66(8):1-8; Sanderson *et al* (2005) *Clin. Cancer Res.* 11:843-852; Jeffrey *et al* (2005) *J. Med. Chem.* 48:1344-1358; Hamblett *et al* (2004) *Clin. Cancer Res.* 10:7063-
15 7070). Drug moieties may impart their cytotoxic and cytostatic effects by mechanisms including tubulin binding, DNA binding, or topoisomerase inhibition. Some cytotoxic drugs tend to be inactive or less active when conjugated to large antibodies or protein receptor ligands.

20 *PBDs in ADCs*

Dimeric PBDs have been disclosed as the drugs in drug conjugates. For example, in WO 2011/130598, dimer PBD compounds having linker groups for connection to a cell binding agent, such as an antibody, are disclosed where the linker group is attached to one of the available N10 positions, and are generally cleaved by action of an enzyme on the linker
25 group.

By contrast, in WO 2011/130613 and WO 2011/130616, dimer PBD compounds having linker groups for connection to a cell binding agent, such as an antibody, are disclosed where the linker group is attached via an aromatic group at one of the C2 positions, and are
30 generally cleaved by action of an enzyme on the linker group. Such antibody drug conjugates are also described in Flyagre, J., *et al*, *Chem. Biol. Drug Des.* 81: 113-121 (2013), which also describes other types of antibody drug conjugates.

A further approach is described in WO 2007/085930, wherein tomamycin-like dimers have a
35 linker group for connection to a cell binding agent, such as an antibody, where the linker

group is attached to the tether between the tomamycin units, and are generally cleaved by action of an enzyme on the linker group.

The present inventors have developed a novel approach to forming PBD conjugates with cell binding agents, and in particular PBD antibody conjugates.

Summary of the Invention

In a general aspect the present invention provides a conjugate comprising a PBD compound with a linker for connecting to a cell binding agent, wherein the linker is attached in a cleavable manner to the C7 position of the one PBD units. The cell binding agent is preferably an antibody. The invention also provides the PBD compound with the linking unit attached, and intermediates for their synthesis.

In a first aspect, the present invention provides a conjugate of formula A:

and salts and solvates thereof, wherein:

D represents either group D1 or D2:

;

the dotted line indicates the optional presence of a double bond between C2 and C3;

when there is a double bond present between C2 and C3, R² is selected from the group consisting of:

(ia) C₅₋₁₀ aryl group, optionally substituted by one or more substituents selected from the group comprising: halo, nitro, cyano, ether, carboxy, ester, C₁₋₇ alkyl, C₃₋₇ heterocyclyl and bis-oxy-C₁₋₃ alkylene;

(ib) C₁₋₅ saturated aliphatic alkyl;

(ic) C₃₋₆ saturated cycloalkyl;

(id)  , wherein each of R^{31} , R^{32} and R^{33} are independently selected from H, C_{1-3} saturated alkyl, C_{2-3} alkenyl, C_{2-3} alkynyl and cyclopropyl, where the total number of carbon atoms in the R^2 group is no more than 5;

(ie)  , wherein one of R^{35a} and R^{35b} is H and the other is selected from:
 5 phenyl, which phenyl is optionally substituted by a group selected from halo, methyl, methoxy; pyridyl; and thiophenyl; and

(if)  , where R^{34} is selected from: H; C_{1-3} saturated alkyl; C_{2-3} alkenyl; C_{2-3} alkynyl; cyclopropyl; phenyl, which phenyl is optionally substituted by a group selected from halo, methyl, methoxy; pyridyl; and thiophenyl;

(ig) halo;
 when there is a single bond present between C2 and C3,

R^2 is  , where R^{36a} and R^{36b} are independently selected from H, F, C_{1-4} saturated alkyl, C_{2-3} alkenyl, which alkyl and alkenyl groups are optionally substituted by a group selected from C_{1-4} alkyl amido and C_{1-4} alkyl ester; or, when one of R^{16a} and R^{16b} is H, the other is selected from nitrile and a C_{1-4} alkyl ester;
 15 R^6 and R^9 are independently selected from H, R, OH, OR, SH, SR, NH_2 , NHR, NRR' , NO_2 , $SnMe_3$ and halo;

either

(a) R^{10} is H, and R^{11} is OH or OR^A , where R^A is C_{1-4} alkyl; or

(b) R^{10} and R^{11} form a nitrogen-carbon double bond between the nitrogen and carbon atoms to which they are bound; or

(c) R^{10} is H and R^{11} is OSO_zM , where z is 2 or 3 and M is a monovalent pharmaceutically acceptable cation; or

(d) R^{11} is OH or OR^A , where R^A is C_{1-4} alkyl and R^{10} is selected from:

Y is selected from formulae A1 and A2:

7

(A1)

(A2)

Z^1 is a C_{1-3} alkylene group;

Z^2 is a C_{1-3} alkylene group;

Q is:

, where Q^X is such that Q is an amino-acid residue, a dipeptide

5 residue or a tripeptide residue;

L is a linker connected to a cell binding agent;

CBA is the cell binding agent;

n is an integer between 0 and 48;

R and R' are each independently selected from optionally substituted C_{1-12} alkyl,

10 C_{3-20} heterocyclyl and C_{5-20} aryl groups, and optionally in relation to the group NRR' , R and R' together with the nitrogen atom to which they are attached form an optionally substituted 4-, 5-, 6- or 7-membered heterocyclic ring;

R^8 is either:

(a) independently selected from H, R, OH, OR, SH, SR, NH_2 , NHR, NRR' , NO_2 , $SnMe_3$ and

15 halo; or

(b) of formula A*:

A*

wherein:

D' represents either group D'1 or D2:

D'1

D'2

wherein the dotted line indicates the optional presence of a double bond between C2' and C3';

R¹⁷ is independently selected from H, R, OH, OR, SH, SR, NH₂, NHR, NRR', NO₂, SnMe₃ and halo;

R'' is a C₃₋₁₂ alkylene group, which chain may be interrupted by one or more heteroatoms, e.g. O, S, N(H), NMe and/or aromatic rings, e.g. benzene or pyridine, which rings are optionally substituted; and

X and X' are independently selected from O, S and N(H); and

R²², R¹⁶, R¹⁹, R²⁰ and R²¹ are as defined for R², R⁶, R⁹, R¹⁰ and R¹¹ respectively.

When R⁸ is A*, the compound is of the formula A*A:

A*A

A second aspect of the present invention provides novel drug-linker compounds of formula (B):

B

and salts and solvates thereof, wherein:

Y^L is selected from formulae B1 and B2:

(B1)

(B2)

G is a linker for connecting to a cell binding agent; and the remaining groups are as defined in the first aspect.

- 5 A third aspect of the present invention also provides compounds of formula (C), which may be used in the preparation of the drug-linkers and conjugates of the invention:

C

and salts and solvates thereof,

Y^C is selected from formulae C1 and C2:

10

(C1)

(C2)

and

the remaining groups are as defined in the first aspect.

A fourth aspect of the present invention provides the use of a compound of the first aspect of the invention in a method of medical treatment. The fourth aspect also provides a pharmaceutical composition comprising a compound of the first aspect, and a pharmaceutically acceptable excipient.

A fifth aspect of the present invention provides a compound of the first aspect of the invention or a pharmaceutical composition of the fourth aspect of the invention for use in a method of treatment of a proliferative disease. The fifth aspect also provides the use of a compound of the first aspect in a method of manufacture of a medicament for the treatment of a proliferative disease, and a method of treating a mammal having a proliferative disease, comprising administering an effective amount of a compound of the first aspect or a pharmaceutical composition of the fourth aspect.

A sixth aspect of the present invention provides a method of synthesis of a compound of the first aspect of the present invention, comprising the step of conjugating a drug-linker of the second aspect with a cell-binding agent.

A seventh aspect of the present invention provides a method of synthesis of a drug-linker of the second aspect, comprising the step of reacting a compound of the third aspect with one or more suitable reagents.

Detailed Description of the Invention**Preferences**

The following preferences may apply to all aspects of the invention as described above, or may relate to a single aspect. The preferences may be combined together in any combination.

D

In some embodiments, *D* is D1.

In some embodiments, *D* is D2.

*R*⁸

In some embodiments, *R*⁸ may be independently selected from H, OH, OR, SH, SR, NH₂, NHR, NRR', and halo.

In some embodiments, *R*⁸ may be independently selected from H, OH and OR, where *R* may be selected from optionally substituted C₁₋₇ alkyl, C₃₋₁₀ heterocyclyl and C₅₋₁₀ aryl groups. *R* in *R*⁸ may in some of these embodiments be a C₁₋₄ alkyl group, which may or may not be substituted. A substituent of interest is a C₅₋₆ aryl group (e.g. phenyl).

In some embodiments, *R*⁸ is selected from OMe and OCH₂Ph.

In some embodiments, *R*⁸ is of formula A*, such that the compound is a PBD dimer.

Dimer link

X and X' are preferably O.

R" is a C₃₋₁₂ alkylene group, which chain may be interrupted by one or more heteroatoms, e.g. O, S, N(H), NMe and/or aromatic rings, e.g. benzene or pyridine, which rings are optionally substituted.

In some embodiments, *R*" may be C₃₋₁₂ alkylene group, which chain may be interrupted by one or more heteroatoms and/or aromatic rings, e.g. benzene or pyridine.

In some embodiments, *R*" may be C₃₋₁₂ alkylene group which is optionally interrupted by one or more heteroatoms selected from O, S, and NMe and/or aromatic rings, which rings are optionally substituted.

In some embodiments, the aromatic ring is a C₅₋₂₀ arylene group, where arylene pertains to a divalent moiety obtained by removing two hydrogen atoms from two aromatic ring atoms of an aromatic compound, which moiety has from 5 to 20 ring atoms. The ring substituents may include -NH₂, CO₂H, SO₃H and N-methylpiperazine.

- 5 In some embodiments, R" may be a C₃₋₁₂ alkylene group, which chain may be interrupted by one or more heteroatoms, e.g. O, S, N(H), NMe and/or aromatic rings, e.g. benzene or pyridine, which rings are optionally substituted by NH₂.

In some embodiments, R" may be C₃₋₁₂ alkylene group.

In some embodiments, R" may be selected from a C₃, C₅, C₇, C₉ and a C₁₁ alkylene group.

- 10 In some embodiments, R" may be selected from a C₃, C₅ and a C₇ alkylene group.

In some embodiments, R" may be selected from a C₃ and a C₅ alkylene group.

In some embodiments, R" is a C₃ alkylene group.

In some embodiments, R" is a C₅ alkylene group.

- 15 The alkylene groups listed above may be optionally interrupted by one or more heteroatoms and/or aromatic rings, e.g. benzene or pyridine, which rings are optionally substituted.

The alkylene groups listed above may be optionally interrupted by one or more heteroatoms and/or aromatic rings, e.g. benzene or pyridine.

The alkylene groups listed above may be unsubstituted linear aliphatic alkylene groups.

- 20 R" is preferably a C₃₋₇ alkylene group with no substituents. More preferably R" is a C₃, C₅ or C₇ alkylene. Most preferably, R" is a C₃ or C₅ alkylene.

R^6

In some embodiments, R⁶ may be independently selected from H, R, OH, OR, SH, SR, NH₂, NHR, NRR', NO₂, SnMe₃ and halo.

25

In some embodiments, R⁶ may be independently selected from H, OH, OR, SH, NH₂, NO₂ and halo.

In some embodiments, R⁶ is independently selected from H and halo.

30

In some embodiments, R⁶ is independently H.

These embodiments also apply to R¹⁶.

R^9

In some embodiments, R^9 may be independently selected from H, R, OH, OR, SH, SR, NH_2 , NHR, NRR', NO_2 , $SnMe_3$ and halo.

5

In some embodiments, R^9 is independently H.

These embodiments also apply to R^{19} .

10 R^{17}

In some embodiments, R^{17} may be independently selected from H, OH, OR, SH, SR, NH_2 , NHR, NRR', and halo.

15

In some embodiments, R^{17} may be independently selected from H, OH and OR, where R may be selected from optionally substituted C_{1-7} alkyl, C_{3-10} heterocyclyl and C_{5-10} aryl groups. R in R^{17} may in some of these embodiments be a C_{1-4} alkyl group, which may or may not be substituted. A substituent of interest is a C_{5-6} aryl group (e.g. phenyl).

20

In some embodiments, R^{17} is selected from OMe and OCH_2Ph .

R^2

25

When R^2 is a C_{5-10} aryl group, in some embodiments it may be a C_{5-7} aryl group. A C_{5-7} aryl group may be a phenyl group or a C_{5-7} heteroaryl group, for example furanyl, thiophenyl and pyridyl. In some embodiments, R^2 may be phenyl. In other embodiments, R^2 may be thiophenyl, for example, thiophen-2-yl and thiophen-3-yl.

30

When R^2 is a C_{5-10} aryl group, in some embodiments it may be a C_{8-10} aryl, for example a quinolinyl or isoquinolinyl group. The quinolinyl or isoquinolinyl group may be bound to the PBD core through any available ring position. For example, the quinolinyl may be quinolin-2-yl, quinolin-3-yl, quinolin-4yl, quinolin-5-yl, quinolin-6-yl, quinolin-7-yl and quinolin-8-yl. Of these quinolin-3-yl and quinolin-6-yl may be preferred. The isoquinolinyl may be isoquinolin-1-yl, isoquinolin-3-yl, isoquinolin-4yl, isoquinolin-5-yl, isoquinolin-6-yl, isoquinolin-7-yl and isoquinolin-8-yl. Of these isoquinolin-3-yl and isoquinolin-6-yl may be preferred.

35

When R^2 is a C_{5-10} aryl group, it may bear any number of substituent groups. In some embodiments, it may bear from 1 to 3 substituent groups. In some embodiments, it may

bear 1 or 2 substituent groups. In some embodiments, it may bear a single substituent group. The substituents may be any position.

Where R^2 is C_{5-7} aryl group, in some embodiments a single substituent may be on a ring atom that is not adjacent the bond to the remainder of the compound, i.e. it may be β or γ to the bond to the remainder of the compound. Therefore, in embodiments where the C_{5-7} aryl group is phenyl, the substituent may be in the meta- or para- positions, or may be in the para- position.

Where R^2 is a C_{8-10} aryl group, for example quinolinyl or isoquinolinyl, in some embodiments there may be any number of substituents at any position of the quinoline or isoquinoline rings. In some embodiments, it bears one, two or three substituents, and these may be on either the proximal and distal rings or both (if more than one substituent).

R^2 substituents, when R^2 is a C_{5-10} aryl group

In embodiments where a substituent on R^2 when R^2 is a C_{5-10} aryl group is halo, it may be F or Cl, and in some of these embodiments Cl.

In embodiments where a substituent on R^2 when R^2 is a C_{5-10} aryl group is ether, it may in some embodiments be an alkoxy group, for example, a C_{1-7} alkoxy group (e.g. methoxy, ethoxy) or it may in some embodiments be a C_{5-7} aryloxy group (e.g. phenoxy, pyridyloxy, furanyloxy). The alkoxy group may itself be further substituted, for example by an amino group (e.g. dimethylamino).

In embodiments where a substituent on R^2 when R^2 is a C_{5-10} aryl group is C_{1-7} alkyl, it may be a C_{1-4} alkyl group (e.g. methyl, ethyl, propyl, butyl).

In embodiments where a substituent on R^2 when R^2 is a C_{5-10} aryl group is C_{3-7} heterocyclyl, it may be C_6 nitrogen containing heterocyclyl group, e.g. morpholino, thiomorpholino, piperidinyl, piperazinyl. These groups may be bound to the rest of the PBD moiety via the nitrogen atom. These groups may be further substituted, for example, by C_{1-4} alkyl groups. If the C_6 nitrogen containing heterocyclyl group is piperazinyl, the said further substituent may be on the second nitrogen ring atom.

In embodiments where a substituent on R^2 when R^2 is a C_{5-10} aryl group is bis-oxy- C_{1-3} alkylene, this may be bis-oxy-methylene or bis-oxy-ethylene.

In embodiments where a substituent on R^2 when R^2 is a C_{5-10} aryl group is ester, this is preferably methyl ester or ethyl ester.

- 5 In some embodiments, substituents when R^2 is a C_{5-10} aryl group may include methoxy, ethoxy, fluoro, chloro, cyano, bis-oxy-methylene, methyl-piperazinyl, morpholino, methyl-thiophenyl, dimethylaminopropoxy and carboxy.

- 10 In some embodiments, R^2 may be selected from 4-methoxy-phenyl, 3-methoxyphenyl, 4-ethoxy-phenyl, 3-ethoxy-phenyl, 4-fluoro-phenyl, 4-chloro-phenyl, 3,4-bisoxymethylene-phenyl, 4-methylthiophenyl, 4-cyanophenyl, 4-phenoxyphenyl, quinolin-3-yl and quinolin-6-yl, isoquinolin-3-yl and isoquinolin-6-yl, 2-thienyl, 2-furanyl, methoxynaphthyl, naphthyl, 4-nitrophenyl, 4-(4-methylpiperazin-1-yl)phenyl and 3,4-bisoxymethylene-phenyl.

15

When R^2 is C_{1-5} saturated aliphatic alkyl, it may be methyl, ethyl, propyl, butyl or pentyl. In some embodiments, it may be methyl, ethyl or propyl (n-pentyl or isopropyl). In some of these embodiments, it may be methyl. In other embodiments, it may be butyl or pentyl, which may be linear or branched.

20

When R^2 is C_{3-6} saturated cycloalkyl, it may be cyclopropyl, cyclobutyl, cyclopentyl or cyclohexyl. In some embodiments, it may be cyclopropyl.

- 25 When R^2 is , in some embodiments, the total number of carbon atoms in the R^2 group is no more than 4 or no more than 3.

In some embodiments, one of R^{31} , R^{32} and R^{33} is H, with the other two groups being selected from H, C_{1-3} saturated alkyl, C_{2-3} alkenyl, C_{2-3} alkynyl and cyclopropyl.

- 30 In other embodiments, two of R^{31} , R^{32} and R^{33} are H, with the other group being selected from H, C_{1-3} saturated alkyl, C_{2-3} alkenyl, C_{2-3} alkynyl and cyclopropyl.

In some embodiments, the groups that are not H are selected from methyl and ethyl. In some of these embodiments, the groups that are not H are methyl.

In some embodiments, R^{31} is H.

5

In some embodiments, R^{32} is H.

In some embodiments, R^{33} is H.

10 In some embodiments, R^{31} and R^{32} are H.

In some embodiments, R^{31} and R^{33} are H.

In some embodiments, R^{32} and R^{33} are H.

15

A R^2 group of particular interest is:  .

When R^2 is  , in some embodiments, the group (R^{35a} or R^{35b}) which is not H is optionally substituted phenyl. If the phenyl optional substituent is halo, it may be fluoro.

20 In some embodiment, the phenyl group is unsubstituted.

When R^2 is  , in some embodiments where R^{34} is phenyl, it is unsubstituted. In other embodiments, the phenyl group bears a single fluoro substituent. In other emboidments, R^{14} is selected from H, methyl, ethyl, ethenyl and ethynyl. In some of these

25 embodiments, R^{14} is selected from H and methyl.

When R^2 is halo, in some embodiments, it is fluoro.

When there is a single bond present between C2 and C3, R^2 is  .

In some embodiments, R^{36a} and R^{36b} are both H.

In other embodiments, R^{36a} and R^{36b} are both methyl.

5

In further embodiments, one of R^{36a} and R^{36b} is H, and the other is selected from C_{1-4} saturated alkyl, C_{2-3} alkenyl, which alkyl and alkenyl groups are optionally substituted. In some of these further embodiment, the group which is not H may be selected from methyl and ethyl.

10

R^{22}

The above preferences for R^2 when there is a double bond present between C2 and C3 apply equally to R^{22} , when there is a double bond present between C2' and C3'.

15 The above preferences for R^2 when there is a single bond present between C2 and C3 apply equally to R^{22} , when there is a single bond present between C2' and C3'.

N10-C11

20 In some embodiment, R^{10} is H, and R^{11} is OH, OR^A , where R^A is C_{1-4} alkyl. In some of these embodiments, R^{11} is OH. In others of these embodiments, R^{11} is OR^A , where R^A is C_{1-4} alkyl. In some of these embodiments, R^A is methyl.

In some embodiments, R^{10} and R^{11} form a nitrogen-carbon double bond between the nitrogen and carbon atoms to which they are bound.

25

In some embodiments, R^{10} is H and R^{11} is OSO_zM , where z is 2 or 3 and M is a monovalent pharmaceutically acceptable cation. In some of these embodiments, M is a monovalent pharmaceutically acceptable cation, and may be Na^+ . Furthermore, in some embodiments z is 3.

30

In some embodiments where R^{10} is (d-iii), there may be an additional ntiro group on the benzene ring, e.g. ortho to R^Z .

In some embodiments, R^{11} is OH or OR^A , where R^A is C_{1-4} alkyl and R^{10} is selected from:

R ^{10a}	
R ^{10b}	
R ^{10c}	
R ^{10d}	
R ^{10e}	
R ^{10f}	

$-C(=O)-X_1-NHC(=O)X_2-NH-$ represent a dipeptide. The amino acids in the dipeptide may be any combination of natural amino acids. The dipeptide may be the site of action for cathepsin-mediated cleavage.

5

In one embodiment, the dipeptide, $-C(=O)-X_1-NHC(=O)X_2-NH-$, is selected from:

-Phe-Lys-,

-Val-Ala-,

-Val-Lys-,

10 -Ala-Lys-,

-Val-Cit-,

-Phe-Cit-,

-Leu-Cit-,

-Ile-Cit-,

15 -Phe-Arg-,

-Trp-Cit-

where Cit is citrulline.

Preferably, the dipeptide, $-C(=O)-X_1-NHC(=O)X_2-NH-$, is selected from:

20 -Phe-Lys-,

-Val-Ala-,

-Val-Lys-,

-Ala-Lys-,
-Val-Cit-.

Most preferably, the dipeptide, $-C(=O)-X_1-NHC(=O)X_2-NH-$, is -Phe-Lys- or -Val-Ala-.

5

Other dipeptide combinations may be used, including those described by Dubowchik *et al.*, *Bioconjugate Chemistry*, 2002, 13,855-869, which is incorporated herein by reference.

10 In one embodiment, the amino acid side chain is derivatised, where appropriate. For example, an amino group or carboxy group of an amino acid side chain may be derivatised.

In one embodiment, an amino group NH_2 of a side chain amino acid, such as lysine, is a derivatised form selected from the group consisting of NHR and NRR'.

15 In one embodiment, a carboxy group $COOH$ of a side chain amino acid, such as aspartic acid, is a derivatised form selected from the group consisting of $COOR$, $CONH_2$, $CONHR$ and $CONRR'$.

20 In one embodiment, the amino acid side chain is chemically protected, where appropriate. The side chain protecting group may be a group as discussed above. The present inventors have established that protected amino acid sequences are cleavable by enzymes. For example, it has been established that a dipeptide sequence comprising a Boc side chain-protected Lys residue is cleavable by cathepsin.

25 Protecting groups for the side chains of amino acids are well known in the art and are described in the Novabiochem Catalog. Additional protecting group strategies are set out in Protective Groups in Organic Synthesis, Greene and Wuts.

Possible side chain protecting groups are shown below for those amino acids having reactive side chain functionality:

30 Arg: Z, Mtr, Tos;
Asn: Trt, Xan;
Asp: Bzl, t-Bu;
Cys: Acn, Bzl, Bzl-OMe, Bzl-Me, Trt;
Glu: Bzl, t-Bu;
35 Gln: Trt, Xan;
His: Boc, Dnp, Tos, Trt;

Lys: Boc, Z-Cl, Fmoc, Z, Alloc;

Ser: Bzl, TBDMS, TBDPS;

Thr: Bz;

Trp: Boc;

5 Tyr: Bzl, Z, Z-Br.

In one embodiment, the side chain protection is selected to be orthogonal to a group provided as, or as part of, a capping group, where present. Thus, the removal of the side chain protecting group does not remove the capping group, or any protecting group
10 functionality that is part of the capping group.

In other embodiments of the invention, the amino acids selected are those having no reactive side chain functionality. For example, the amino acids may be selected from: Ala, Gly, Ile, Leu, Met, Phe, Pro, and Val.
15

It is particularly preferred in the present invention, that if L^1 comprises a dipeptide, then $-C(=O)-X_1-NHC(=O)X_2-NH-$ is the same dipeptide.

Other preferred R^{10} groups include:

The above preferences apply equally to R^{20} and R^{21} .

R and R'

25 In some embodiments, R is independently selected from optionally substituted C_{1-12} alkyl, C_{3-20} heterocyclyl and C_{5-20} aryl groups. These groups are each defined in the substituents section below.

In some embodiments, R is independently optionally substituted C_{1-12} alkyl. In other
30 embodiments, R is independently optionally substituted C_{3-20} heterocyclyl. In further

embodiments, R is independently optionally substituted C₅₋₂₀ aryl. In further embodiments, R is independently optionally substituted C₁₋₁₂ alkyl.

Described above in relation to R² are various embodiments relating to preferred alkyl and aryl groups and the identity and number of optional substituents. The preferences set out for R² as it applies to R are applicable, where appropriate, to all other groups R.

The preferences for R apply also to R'.

- 10 In some embodiments of the invention there is provided a compound having a substituent group -NRR'. In one embodiment, R and R' together with the nitrogen atom to which they are attached form an optionally substituted 4-, 5-, 6- or 7-membered heterocyclic ring. The ring may contain a further heteroatom, for example N, O or S. In some of these
15 embodiments, the heterocyclic ring is itself substituted with a group R. Where a further N heteroatom is present, the substituent may be on the N heteroatom.

Dimers

- In some embodiments, the groups X', D, R¹⁶, R¹⁹, R²⁰ and R²¹ are the same as the groups X, D', R⁶, R⁹, R¹⁰ and R¹¹ respectively. In these embodiments, the PBD monomer units have
20 the same substituents except for at the 7 position.

Particularly preferred compounds of the first aspect of the present invention may be of formula Ia:

- 25 where
R¹⁰, R¹¹, R²⁰, R²¹ and Y are as defined above;
m is 1 or 3;
R^{1a} is methyl or phenyl; and
R^{2a} is selected from:

Particularly preferred compounds of the first aspect of the present invention may be of
 10 formula Ib:

where

R^{10} , R^{11} , R^{20} , R^{21} and Y are as defined above;

15 m is 1 or 3; and

R^{1a} is methyl or phenyl.

Particularly preferred compounds of the second aspect of the present invention may be of
 formula IIa:

IIa

where

R^{10} , R^{11} , R^{20} , R^{21} and Y^L are as defined above;

m is 1 or 3;

5 R^{1a} is methyl or phenyl; and

R^{2a} is selected from:

15

Particularly preferred compounds of the second aspect of the present invention may be of formula IIb:

25

IIb

where

R^{10} , R^{11} , R^{20} , R^{21} and Y^L are as defined above;

5 m is 1 or 3; and

R^{1a} is methyl or phenyl.

Particularly preferred compounds of the third aspect of the present invention may be of formula IIIa:

IIIa

10

where

R^{10} , R^{11} , R^{20} , R^{21} and Y^C are as defined above;

m is 1 or 3;

R^{1a} is methyl or phenyl; and

15 R^{2a} is selected from:

Particularly preferred compounds of the third aspect of the present invention may be of
 5 formula IIIb:

where

R^{10} , R^{11} , R^{20} , R^{21} and Y^C are as defined above;

10 m is 1 or 3; and

R^{1a} is methyl or phenyl.

Z^1 , Z^2 , Z^3

In some embodiments, Z^1 is methylene. In some embodiments, Z^1 is ethylene. In some
 15 embodiments, Z^1 is propylene.

In some embodiments, Z^2 is methylene. In some embodiments, Z^2 is ethylene. In some
 embodiments, Z^2 is propylene.

20 In some embodiments, Z^3 is methylene. In some embodiments, Z^3 is ethylene. In some
 embodiments, Z^3 is propylene.

n (Y , Y^L)

In some embodiments, n (in Y or Y^L) is an integer between 0 and 24.

25

In some embodiments, n (in Y or Y^L) is an integer between 0 and 12.

In some embodiments, n (in Y or Y^L) is an integer between 0 and 8.

In some embodiments, n (in Y or Y^L) is an integer between 0 and 6.

In some embodiments, n (in Y or Y^L) is 0.

5 In some embodiments, n (in Y or Y^L) is 1.

In some embodiments, n (in Y or Y^L) is 2.

In some embodiments, n (in Y or Y^L) is 3.

In some embodiments, n (in Y or Y^L) is 4.

In some embodiments, n (in Y or Y^L) is 5.

10 In some embodiments, n (in Y or Y^L) is 6.

In some embodiments, n (in Y or Y^L) is 7.

In some embodiments, n (in Y or Y^L) is 8.

In some embodiments, Z^1 is methylene and n is 3.

15 In some embodiments, Z^2 is propylene and n is 8.

Q^x

In one embodiment, Q is an amino acid residue. The amino acid may be a natural amino acid or a non-natural amino acid.

20

In one embodiment, Q is selected from: Phe, Lys, Val, Ala, Cit, Leu, Ile, Arg, and Trp, where Cit is citrulline.

In one embodiment, Q comprises a dipeptide residue. The amino acids in the dipeptide may be any combination of natural amino acids and non-natural amino acids. In some embodiments, the dipeptide comprises natural amino acids. Where the linker is a cathepsin labile linker, the dipeptide is the site of action for cathepsin-mediated cleavage. The dipeptide then is a recognition site for cathepsin.

30 In one embodiment, Q is selected from:

35 $^{\text{NH}}\text{-Val-Cit-}^{\text{C=O}},$

NH-Leu-Cit-C(=O) ,
 NH-Ile-Cit-C(=O) ,
 NH-Phe-Arg-C(=O) , and
 NH-Trp-Cit-C(=O) ;

5 where Cit is citrulline.

Preferably, Q is selected from:

NH-Phe-Lys-C(=O) ,
 NH-Val-Ala-C(=O) ,
 10 NH-Val-Lys-C(=O) ,
 NH-Ala-Lys-C(=O) , and
 NH-Val-Cit-C(=O) .

Most preferably, Q is selected from NH-Phe-Lys-C(=O) , NH-Val-Cit-C(=O) or NH-Val-Ala-C(=O) .

15

Other dipeptide combinations of interest include:

NH-Gly-Gly-C(=O) ,
 NH-Pro-Pro-C(=O) , and
 NH-Val-Glu-C(=O) .

20

Other dipeptide combinations may be used, including those described by Dubowchik et al., *Bioconjugate Chemistry*, 2002, 13,855-869, which is incorporated herein by reference.

25 In some embodiments, Q is a tripeptide residue. The amino acids in the tripeptide may be any combination of natural amino acids and non-natural amino acids. In some embodiments, the tripeptide comprises natural amino acids. Where the linker is a cathepsin labile linker, the tripeptide is the site of action for cathepsin-mediated cleavage. The tripeptide then is a recognition site for cathepsin.

30 In one embodiment, the amino acid side chain is chemically protected, where appropriate. The side chain protecting group may be a group as discussed above. Protected amino acid sequences are cleavable by enzymes. For example, a dipeptide sequence comprising a Boc side chain-protected Lys residue is cleavable by cathepsin.

35 Protecting groups for the side chains of amino acids are well known in the art and are described in the Novabiochem Catalog, and as described above.

In some embodiments, the groups Q and $-C(=O)-X_1-NHC(=O)X_2-NH-$ may be the same.

In some embodiments, the groups Q and $-C(=O)-X_1-NHC(=O)X_2-NH-$ may be different.

5

L and G

L is a linker connected to the cell binding agent in the conjugate compound. G is a linker for connecting the PBD dimer to the cell binding agent to form the conjugate compound.

- 10 Preferably, the linker contains an electrophilic functional group for reaction with a nucleophilic functional group on the cell binding agent. Nucleophilic groups on antibodies include, but are not limited to: (i) N-terminal amine groups, (ii) side chain amine groups, e.g. lysine, (iii) side chain thiol groups, e.g. cysteine, and (iv) sugar hydroxyl or amino groups where the antibody is glycosylated. Amine, thiol, and hydroxyl groups are nucleophilic and
- 15 capable of reacting to form covalent bonds with electrophilic groups on linker moieties and linker reagents including: (i) maleimide groups (ii) activated disulfides, (iii) active esters such as NHS (N-hydroxysuccinimide) esters, HOBt (N-hydroxybenzotriazole) esters, haloformates, and acid halides; (iv) alkyl and benzyl halides such as haloacetamides; and (v) aldehydes, ketones, carboxyl, and, some of which are exemplified as follows:

20

Certain antibodies have reducible interchain disulfides, i.e. cysteine bridges. Antibodies may be made reactive for conjugation with linker reagents by treatment with a reducing agent such as DTT (dithiothreitol). Each cysteine bridge will thus form, theoretically, two reactive thiol nucleophiles. Additional nucleophilic groups can be introduced into antibodies through the reaction of lysines with 2-iminothiolane (Traut's reagent) resulting in conversion of an amine into a thiol. Reactive thiol groups may be introduced into the antibody (or fragment thereof) by introducing one, two, three, four, or more cysteine residues (e.g., preparing

25

mutant antibodies comprising one or more non-native cysteine amino acid residues). US 7521541 teaches engineering antibodies by introduction of reactive cysteine amino acids. In some embodiments, a Linker has a reactive nucleophilic group which is reactive with an electrophilic group present on an antibody. Useful electrophilic groups on an antibody include, but are not limited to, aldehyde and ketone carbonyl groups. The heteroatom of a nucleophilic group of a Linker can react with an electrophilic group on an antibody and form a covalent bond to an antibody unit. Useful nucleophilic groups on a Linker include, but are not limited to, hydrazide, oxime, amino, hydroxyl, hydrazine, thiosemicarbazone, hydrazine carboxylate, and arylhydrazide. The electrophilic group on an antibody provides a convenient site for attachment to a Linker.

In one embodiment, the group L is:

where the asterisk indicates the point of attachment to the rest of group Y, the wavy line indicates the point of attachment to the cell binding agent, and m is 0 to 6. In one embodiment, m is 5.

In one embodiment, the connection between the cell binding agent and L is through a thiol residue of the cell binding agent and a maleimide group of L.

In one embodiment, the connection between the cell binding agent and L is:

where the asterisk indicates the point of attachment to the remaining portion of the L group or the remaining portion of the Y group and the wavy line indicates the point of attachment to the remaining portion of the cell binding agent. In this embodiment, the S atom is typically derived from the cell binding agent.

In each of the embodiments above, an alternative functionality may be used in place of the maleimide-derived group shown below:

31

where the wavy line indicates the point of attachment to the cell binding agent as before, and the asterisk indicates the bond to the remaining portion of the L group or the remaining portion of the Y group.

5

In one embodiment, the maleimide-derived group is replaced with the group:

where the wavy line indicates point of attachment to the cell binding agent, and the asterisk indicates the bond to the remaining portion of the L group or the remaining portion of the Y group.

10

In one embodiment, the maleimide-derived group is replaced with a group, which optionally together with the cell binding agent, is selected from:

15

-C(=O)NH-,

-C(=O)O-,

-NHC(=O)-,

-OC(=O)-,

-OC(=O)O-,

-NHC(=O)O-,

20

-OC(=O)NH-,

-NHC(=O)NH-,

-NHC(=O)NH,

-C(=O)NHC(=O)-,

-S-,

25

-S-S-,

-CH₂C(=O)-

-C(=O)CH₂-,

=N-NH-, and

-NH-N=.

30

In one embodiment, the maleimide-derived group is replaced with a group, which optionally together with the cell binding agent, is selected from:

where the wavy line indicates either the point of attachment to the cell binding agent or the bond to the remaining portion of the L group or the remaining portion of the Y group, and the asterisk indicates the other of the point of attachment to the cell binding agent or the bond to the remaining portion of the L group or the remaining portion of the Y group.

Other groups that can be used as L for connecting the remaining portion of the Y group to the cell binding agent are described in WO 2005/082023.

Thus, in embodiments of the present invention, L is of formula:

Where m is from 0 to 6; and

L^A is selected from:

(L^{A1-1})		(L^{A6})	
(L^{A1-2})		(L^{A7})	
(L^{A2})		(L^{A8-1})	
(L^{A3})		(L^{A8-2})	

(L ^{A3-2})		(L ^{A9-1})	
(L ^{A4})		(L ^{A9-2})	
(L ^{A5})			

where Ar represents a C₅₋₆ arylene group, e.g. phenylene.

Thus, in embodiments of the present invention, G is of formula:

5 Where m is from 0 to 6; and

G^A is selected from:

(G ^{A1-1})		(G ^{A4})	 Where Hal = I, Br, Cl
(G ^{A1-2})		(G ^{A5})	
(G ^{A2})		(G ^{A6})	
(G ^{A3-1})	 where the NO ₂ group is optional	(G ^{A7})	

(G ^{A3-2})	 <p>where the NO₂ group is optional</p>	(G ^{A8})	
(G ^{A3-3})	 <p>where the NO₂ group is optional</p>	(G ^{A9})	
(G ^{A3-4})	 <p>where the NO₂ group is optional</p>		

where Ar represents a C₅₋₆ arylene group, e.g. phenylene.

In some embodiments, m may be 2 or 5.

5 Cell Binding Agent

A cell binding agent may be of any kind, and include peptides and non-peptides. These can include antibodies or a fragment of an antibody that contains at least one binding site, lymphokines, hormones, hormone mimetics, vitamins, growth factors, nutrient-transport molecules, or any other cell binding molecule or substance.

10

Peptides

In one embodiment, the cell binding agent is a linear or cyclic peptide comprising 4-30, preferably 6-20, contiguous amino acid residues. In this embodiment, it is preferred that one cell binding agent is linked to one monomer or dimer pyrrolobenzodiazepine compound.

15

In one embodiment the cell binding agent comprises a peptide that binds integrin $\alpha_v\beta_6$. The peptide may be selective for $\alpha_v\beta_6$ over XYS.

In one embodiment the cell binding agent comprises the A20FMDV-Cys polypeptide. The A20FMDV-Cys has the sequence: NAVPNLRGDLQVLAQKVARTC. Alternatively, a variant of the A20FMDV-Cys sequence may be used wherein one, two, three, four, five, six, seven, eight, nine or ten amino acid residues are substituted with another amino acid residue.

5 Furthermore, the polypeptide may have the sequence NAVXXXXXXXXXXXXXXXXXRTC.

Antibodies

The term "antibody" herein is used in the broadest sense and specifically covers monoclonal antibodies, polyclonal antibodies, dimers, multimers, multispecific antibodies (e.g., bispecific
10 antibodies), and antibody fragments, so long as they exhibit the desired biological activity (Miller *et al* (2003) *Jour. of Immunology* 170:4854-4861). Antibodies may be murine, human, humanized, chimeric, or derived from other species. An antibody is a protein generated by the immune system that is capable of recognizing and binding to a specific antigen. (Janeway, C., Travers, P., Walport, M., Shlomchik (2001) *Immuno Biology*, 5th Ed., Garland
15 Publishing, New York). A target antigen generally has numerous binding sites, also called epitopes, recognized by CDRs on multiple antibodies. Each antibody that specifically binds to a different epitope has a different structure. Thus, one antigen may have more than one corresponding antibody. An antibody includes a full-length immunoglobulin molecule or an immunologically active portion of a full-length immunoglobulin molecule, *i.e.*, a molecule that
20 contains an antigen binding site that immunospecifically binds an antigen of a target of interest or part thereof, such targets including but not limited to, cancer cell or cells that produce autoimmune antibodies associated with an autoimmune disease. The immunoglobulin can be of any type (e.g. IgG, IgE, IgM, IgD, and IgA), class (e.g. IgG1, IgG2, IgG3, IgG4, IgA1 and IgA2) or subclass of immunoglobulin molecule. The immunoglobulins
25 can be derived from any species, including human, murine, or rabbit origin.

"Antibody fragments" comprise a portion of a full length antibody, generally the antigen binding or variable region thereof. Examples of antibody fragments include Fab, Fab', F(ab')₂, and scFv fragments; diabodies; linear antibodies; fragments produced by a Fab
30 expression library, anti-idiotypic (anti-Id) antibodies, CDR (complementary determining region), and epitope-binding fragments of any of the above which immunospecifically bind to cancer cell antigens, viral antigens or microbial antigens, single-chain antibody molecules; and multispecific antibodies formed from antibody fragments.

35 The term "monoclonal antibody" as used herein refers to an antibody obtained from a population of substantially homogeneous antibodies, *i.e.* the individual antibodies comprising

the population are identical except for possible naturally occurring mutations that may be present in minor amounts. Monoclonal antibodies are highly specific, being directed against a single antigenic site. Furthermore, in contrast to polyclonal antibody preparations which include different antibodies directed against different determinants (epitopes), each

5 monoclonal antibody is directed against a single determinant on the antigen. In addition to their specificity, the monoclonal antibodies are advantageous in that they may be synthesized uncontaminated by other antibodies. The modifier "monoclonal" indicates the character of the antibody as being obtained from a substantially homogeneous population of antibodies, and is not to be construed as requiring production of the antibody by any

10 particular method. For example, the monoclonal antibodies to be used in accordance with the present invention may be made by the hybridoma method first described by Kohler *et al* (1975) *Nature* 256:495, or may be made by recombinant DNA methods (see, US 4816567). The monoclonal antibodies may also be isolated from phage antibody libraries using the techniques described in Clackson *et al* (1991) *Nature*, 352:624-628; Marks *et al* (1991) *J.*

15 *Mol. Biol.*, 222:581-597 or from transgenic mice carrying a fully human immunoglobulin system (Lonberg (2008) *Curr. Opinion* 20(4):450-459).

The monoclonal antibodies herein specifically include "chimeric" antibodies in which a portion of the heavy and/or light chain is identical with or homologous to corresponding

20 sequences in antibodies derived from a particular species or belonging to a particular antibody class or subclass, while the remainder of the chain(s) is identical with or homologous to corresponding sequences in antibodies derived from another species or belonging to another antibody class or subclass, as well as fragments of such antibodies, so long as they exhibit the desired biological activity (US 4816567; and Morrison *et al* (1984)

25 *Proc. Natl. Acad. Sci. USA*, 81:6851-6855). Chimeric antibodies include "primatized" antibodies comprising variable domain antigen-binding sequences derived from a non-human primate (e.g. Old World Monkey or Ape) and human constant region sequences.

An "intact antibody" herein is one comprising a VL and VH domains, as well as a light chain

30 constant domain (CL) and heavy chain constant domains, CH1, CH2 and CH3. The constant domains may be native sequence constant domains (e.g. human native sequence constant domains) or amino acid sequence variant thereof. The intact antibody may have one or more "effector functions" which refer to those biological activities attributable to the Fc region (a native sequence Fc region or amino acid sequence variant Fc region) of an

35 antibody. Examples of antibody effector functions include C1q binding; complement dependent cytotoxicity; Fc receptor binding; antibody-dependent cell-mediated cytotoxicity

(ADCC); phagocytosis; and down regulation of cell surface receptors such as B cell receptor and BCR.

Depending on the amino acid sequence of the constant domain of their heavy chains, intact
5 antibodies can be assigned to different "classes." There are five major classes of intact
antibodies: IgA, IgD, IgE, IgG, and IgM, and several of these may be further divided into
"subclasses" (isotypes), e.g., IgG1, IgG2, IgG3, IgG4, IgA, and IgA2. The heavy-chain
constant domains that correspond to the different classes of antibodies are called α , δ , ϵ , γ ,
and μ , respectively. The subunit structures and three-dimensional configurations of different
10 classes of immunoglobulins are well known.

Humanisation

Techniques to reduce the *in vivo* immunogenicity of a non-human antibody or antibody
fragment include those termed "humanisation".

15 A "humanized antibody" refers to a polypeptide comprising at least a portion of a modified
variable region of a human antibody wherein a portion of the variable region, preferably a
portion substantially less than the intact human variable domain, has been substituted by the
corresponding sequence from a non-human species and wherein the modified variable
20 region is linked to at least another part of another protein, preferably the constant region of a
human antibody. The expression "humanized antibodies" includes human antibodies in
which one or more complementarity determining region ("CDR") amino acid residues and/or
one or more framework region ("FW" or "FR") amino acid residues are substituted by amino
acid residues from analogous sites in rodent or other non-human antibodies. The expression
25 "humanized antibody" also includes an immunoglobulin amino acid sequence variant or
fragment thereof that comprises an FR having substantially the amino acid sequence of a
human immunoglobulin and a CDR having substantially the amino acid sequence of a non-
human immunoglobulin.

30 "Humanized" forms of non-human (e.g., murine) antibodies are chimeric antibodies that
contain minimal sequence derived from non-human immunoglobulin. Or, looked at another
way, a humanized antibody is a human antibody that also contains selected sequences from
non-human (e.g. murine) antibodies in place of the human sequences. A humanized
antibody can include conservative amino acid substitutions or non-natural residues from the
35 same or different species that do not significantly alter its binding and/or biologic activity.

Such antibodies are chimeric antibodies that contain minimal sequence derived from non-human immunoglobulins.

5 There are a range of humanisation techniques, including 'CDR grafting', 'guided selection', 'deimmunization', 'resurfacing' (also known as 'veneering'), 'composite antibodies', 'Human String Content Optimisation' and framework shuffling.

CDR grafting

10 In this technique, the humanized antibodies are human immunoglobulins (recipient antibody) in which residues from a complementary-determining region (CDR) of the recipient antibody are replaced by residues from a CDR of a non-human species (donor antibody) such as mouse, rat, camel, bovine, goat, or rabbit having the desired properties (in effect, the non-human CDRs are 'grafted' onto the human framework). In some instances, framework region (FR) residues of the human immunoglobulin are replaced by corresponding non-human
15 residues (this may happen when, for example, a particular FR residue has significant effect on antigen binding).

Furthermore, humanized antibodies can comprise residues that are found neither in the recipient antibody nor in the imported CDR or framework sequences. These modifications
20 are made to further refine and maximize antibody performance. Thus, in general, a humanized antibody will comprise all of at least one, and in one aspect two, variable domains, in which all or all of the hypervariable loops correspond to those of a non-human immunoglobulin and all or substantially all of the FR regions are those of a human immunoglobulin sequence. The humanized antibody optionally also will comprise at least a
25 portion of an immunoglobulin constant region (Fc), or that of a human immunoglobulin.

Guided selection

The method consists of combining the V_H or V_L domain of a given non-human antibody specific for a particular epitope with a human V_H or V_L library and specific human V domains
30 are selected against the antigen of interest. This selected human V_H is then combined with a V_L library to generate a completely human V_HxV_L combination. The method is described in Nature Biotechnology (N.Y.) 12, (1994) 899-903.

Composite antibodies

In this method, two or more segments of amino acid sequence from a human antibody are combined within the final antibody molecule. They are constructed by combining multiple human VH and VL sequence segments in combinations which limit or avoid human T cell epitopes in the final composite antibody V regions. Where required, T cell epitopes are limited or avoided by, exchanging V region segments contributing to or encoding a T cell epitope with alternative segments which avoid T cell epitopes. This method is described in US 2008/0206239 A1.

Deimmunization

This method involves the removal of human (or other second species) T-cell epitopes from the V regions of the therapeutic antibody (or other molecule). The therapeutic antibodies V-region sequence is analysed for the presence of MHC class II- binding motifs by, for example, comparison with databases of MHC-binding motifs (such as the "motifs" database hosted at www.wehi.edu.au). Alternatively, MHC class II- binding motifs may be identified using computational threading methods such as those devised by Altuvia et al. (J. Mol. Biol. 249 244-250 (1995)); in these methods, consecutive overlapping peptides from the V-region sequences are testing for their binding energies to MHC class II proteins. This data can then be combined with information on other sequence features which relate to successfully presented peptides, such as amphipathicity, Rothbard motifs, and cleavage sites for cathepsin B and other processing enzymes.

Once potential second species (e.g. human) T-cell epitopes have been identified, they are eliminated by the alteration of one or more amino acids. The modified amino acids are usually within the T-cell epitope itself, but may also be adjacent to the epitope in terms of the primary or secondary structure of the protein (and therefore, may not be adjacent in the primary structure). Most typically, the alteration is by way of substitution but, in some circumstances amino acid addition or deletion will be more appropriate.

All alterations can be accomplished by recombinant DNA technology, so that the final molecule may be prepared by expression from a recombinant host using well established methods such as Site Directed Mutagenesis. However, the use of protein chemistry or any other means of molecular alteration is also possible.

Resurfacing

This method involves:

(a) determining the conformational structure of the variable region of the non-human (e.g. rodent) antibody (or fragment thereof) by constructing a three-dimensional model of the non-human antibody variable region;

(b) generating sequence alignments using relative accessibility distributions from
5 x-ray crystallographic structures of a sufficient number of non-human and human antibody variable region heavy and light chains to give a set of heavy and light chain framework positions wherein the alignment positions are identical in 98% of the sufficient number of non-human antibody heavy and light chains;

(c) defining for the non-human antibody to be humanized, a set of heavy and light
10 chain surface exposed amino acid residues using the set of framework positions generated in step (b);

(d) identifying from human antibody amino acid sequences a set of heavy and light
chain surface exposed amino acid residues that is most closely identical to the set of surface exposed amino acid residues defined in step (c), wherein the heavy and light chain from the
15 human antibody are or are not naturally paired;

(e) substituting, in the amino acid sequence of the non-human antibody to be humanized, the set of heavy and light chain surface exposed amino acid residues defined in step (c) with the set of heavy and light chain surface exposed amino acid residues identified in step (d);

(f) constructing a three-dimensional model of the variable region of the non-human
20 antibody resulting from the substituting specified in step (e);

(g) identifying, by comparing the three-dimensional models constructed in steps (a) and (f), any amino acid residues from the sets identified in steps (c) or (d), that are within 5 Angstroms of any atom of any residue of the complementarity determining regions of the
25 non-human antibody to be humanized; and

(h) changing any residues identified in step (g) from the human to the original non-human amino acid residue to thereby define a non-human antibody humanizing set of surface exposed amino acid residues; with the proviso that step (a) need not be conducted first, but must be conducted prior to step (g).

Superhumanization

The method compares the non-human sequence with the functional human germline gene repertoire. Those human genes encoding canonical structures identical or closely related to the non-human sequences are selected. Those selected human genes with highest
35 homology within the CDRs are chosen as FR donors. Finally, the non-human CDRs are grafted onto these human FRs. This method is described in patent WO 2005/079479 A2.

Human String Content Optimization

This method compares the non-human (e.g. mouse) sequence with the repertoire of human germline genes and the differences are scored as Human String Content (HSC) that
 5 quantifies a sequence at the level of potential MHC/T-cell epitopes. The target sequence is then humanized by maximizing its HSC rather than using a global identity measure to generate multiple diverse humanized variants (described in Molecular Immunology, 44, (2007) 1986–1998).

10 Framework Shuffling

The CDRs of the non-human antibody are fused in-frame to cDNA pools encompassing all known heavy and light chain human germline gene frameworks. Humanised antibodies are then selected by e.g. panning of the phage displayed antibody library. This is described in *Methods* **36**, 43-60 (2005).

15 Examples of cell binding agents include those agents described for use in WO 2007/085930, which is incorporated herein.

Tumour-associate antigens and cognate antibodies for use in embodiments of the present
 20 invention are listed below.

ANTIBODIES

Abbott: US20110177095

For example, an antibody comprising CDRs having overall at least 80% sequence
20 identity to CDRs having amino acid sequences of SEQ ID NO:3 (CDR-H1), SEQ ID NO:4 (CDR-H2), SEQ ID NO:5 (CDR-H3), SEQ ID NO:104 and/or SEQ ID NO:6 (CDR-L1), SEQ ID NO:7 (CDR-L2), and SEQ ID NO:8 (CDR-L3), wherein the anti-HER2 antibody or anti-HER2 binding fragment has reduced immunogenicity as compared to an antibody having a VH of SEQ ID NO:1 and a VL of SEQ ID NO:2.

25 Biogen: US20100119511

For example, ATCC accession numbers: PTA-10355, PTA-10356, PTA-10357, PTA-10358

For example, a purified antibody molecule that binds to HER2 comprising a all six
30 CDR's from an antibody selected from the group consisting of BIIB71F10 (SEQ ID NOs:11, 13), BIIB69A09 (SEQ ID NOs:15, 17); BIIB67F10 (SEQ ID NOs:19, 21); BIIB67F11 (SEQ ID NOs:23, 25), BIIB66A12 (SEQ ID NOs:27, 29), BIIB66C01 (SEQ ID NOs:31, 33), BIIB65C10 (SEQ ID NOs:35, 37), BIIB65H09 (SEQ ID NOs:39, 41) and BIIB65B03 (SEQ ID NOs:43, 45), or CDRs which are identical or which have no
35 more than two alterations from said CDRs.

Herceptin (Genentech) - US6,054,297; ATCC accession no. CRL-10463 (Genentech)

Pertuzumab (Genentech)

US20110117097

- 5 for example, see SEQ IDs No. 15&16, SEQ IDs No. 17&18, SEQ IDs No. 23&24 & ATCC accession numbers HB-12215, HB-12216, CRL 10463, HB-12697.

US20090285837

US20090202546

- 10 for example, ATCC accession numbers: HB-12215, HB-12216, CRL 10463, HB-12698.

US20060088523

- 15 - for example, ATCC accession numbers: HB-12215, HB-12216
 - for example, an antibody comprising the variable light and variable heavy amino acid sequences in SEQ ID Nos. 3 and 4, respectively.
 - for example, an antibody comprising a light chain amino acid sequence selected from SEQ ID No. 15 and 23, and a heavy chain amino acid sequence selected from SEQ ID No. 16 and 24

US20060018899

- 20 - for example, ATCC accession numbers: (7C2) HB-12215, (7F3) HB-12216, (4D5) CRL-10463, (2C4) HB-12697.
 - for example, an antibody comprising the amino acid sequence in SEQ ID No. 23, or a deamidated and/or oxidized variant thereof.

25 US2011/0159014

- for example, an antibody having a light chain variable domain comprising the hypervariable regions of SEQ ID NO: 1".
 - For example, an antibody having a heavy chain variable domain comprising the hypervariable regions of SEQ ID NO: 2.

ANTIBODIES

35 US 7,666,425:

Antibodies produced by Hybridomas having the following ATCC references: ATCC accession No. HB-12101, ATCC accession No. HB-12109, ATCC accession No. HB-12127 and ATCC accession No. HB-12126.

- 5 Proscan: a monoclonal antibody selected from the group consisting of 8H12, 3E11, 17G1, 29B4, 30C1 and 20F2 (US 7,811,564; Moffett S., et al *Hybridoma (Larchmt)*. 2007 Dec;26(6):363-72).

- Cytogen: monoclonal antibodies 7E11-C5 (ATCC accession No. HB 10494) and 9H10-A4
10 (ATCC accession No. HB11430) – US 5,763,202

GlycoMimetics: NUH2 - ATCC accession No. HB 9762 (US 7,135,301)

- Human Genome Science: HPRAJ70 - ATCC accession No. 97131 (US 6,824,993); Amino
15 acid sequence encoded by the cDNA clone (HPRAJ70) deposited as American Type Culture Collection ("ATCC") Deposit No. 97131

Medarex: Anti-PSMA antibodies that lack fucosyl residues - US 7,875,278

- 20 Mouse anti-PSMA antibodies include the 3F5.4G6, 3D7.1.1, 4E10-1.14, 3E11, 4D8, 3E6, 3C9, 2C7, 1G3, 3C4, 3C6, 4D4, 1G9, 5C8B9, 3G6, 4C8B9, and monoclonal antibodies. Hybridomas secreting 3F5.4G6, 3D7.1.1, 4E10-1.14, 3E11, 4D8, 3E6, 3C9, 2C7, 1G3, 3C4, 3C6, 4D4, 1G9, 5C8B9, 3G6 or 4C8B9 have been publicly deposited and are described in U.S. Pat. No. 6,159,508. Relevant hybridomas have been publicly deposited and are
25 described in U.S. Pat. No. 6,107,090. Moreover, humanized anti-PSMA antibodies, including a humanized version of J591, are described in further detail in PCT Publication WO 02/098897.

- Other mouse anti-human PSMA antibodies have been described in the art, such as mAb
30 107-1A4 (Wang, S. et al. (2001) *Int. J. Cancer* 92:871-876) and mAb 2C9 (Kato, K. et al. (2003) *Int. J. Urol.* 10:439-444).

- Examples of human anti-PSMA monoclonal antibodies include the 4A3, 7F12, 8C12, 8A11, 16F9, 2A10, 2C6, 2F5 and 1C3 antibodies, isolated and structurally characterized as
35 originally described in PCT Publications WO 01/09192 and WO 03/064606 and in U.S. Provisional Application Ser. No. 60/654,125, entitled "Human Monoclonal Antibodies to

Prostate Specific Membrane Antigen (PSMA)", filed on Feb. 18, 2005. The V.sub.H amino acid sequences of 4A3, 7F12, 8C12, 8A11, 16F9, 2A10, 2C6, 2F5 and 1C3 are shown in SEQ ID NOs: 1-9, respectively. The V.sub.L amino acid sequences of 4A3, 7F12, 8C12, 8A11, 16F9, 2A10, 2C6, 2F5 and 1C3 are shown in SEQ ID NOs: 10-18, respectively.

5

Other human anti-PSMA antibodies include the antibodies disclosed in PCT Publication WO 03/034903 and US Application No. 2004/0033229.

NW Biotherapeutics: A hybridoma cell line selected from the group consisting of 3F5.4G6 having ATCC accession number HB12060, 3D7-1.I. having ATCC accession number HB12309, 4E10-1.14 having ATCC accession number HB12310, 3E11 (ATCC HB12488), 4D8 (ATCC HB12487), 3E6 (ATCC HB12486), 3C9 (ATCC HB12484), 2C7 (ATCC HB12490), 1G3 (ATCC HB12489), 3C4 (ATCC HB12494), 3C6 (ATCC HB12491), 4D4 (ATCC HB12493), 1G9 (ATCC HB12495), 5C8B9 (ATCC HB12492) and 3G6 (ATCC HB12485) – see US 6,150,508

15

PSMA Development Company / Progenics / Cytogen – Seattle Genetics: mAb 3.9, produced by the hybridoma deposited under ATCC Accession No. PTA-3258 or mAb 10.3, produced by the hybridoma deposited under ATCC Accession No. PTA-3347 - US 7,850,971

Other Designations: integrin beta-6

5

ANTIBODIES

Biogen: US 7,943,742 - Hybridoma clones 6.3G9 and 6.8G6 were deposited with the ATCC, accession numbers ATCC PTA-3649 and -3645, respectively.

- 10 Biogen: US7,465,449 - In some embodiments, the antibody comprises the same heavy and light chain polypeptide sequences as an antibody produced by hybridoma 6.1A8, 6.3G9, 6.8G6, 6.2B1, 6.2B10, 6.2A1, 6.2E5, 7.1G10, 7.7G5, or 7.1C5.

Centocor (J&J): US7,550,142; US7,163,681

- 15 For example in US 7,550,142 - an antibody having human heavy chain and human light chain variable regions comprising the amino acid sequences shown in SEQ ID NO: 7 and SEQ ID NO: 8.

Seattle Genetics: 15H3 (Ryan MC., et al Cancer Res April 15, 2012; 72(8

- 20 Supplement): 4630)

(41) CEACAM5 (Carcinoembryonic antigen-related cell adhesion molecule 5)Nucleotide

Genbank accession no M17303

- 25 Genbank version no. M17303.1 GI:178676

Genbank record update date: Jun 23, 2010 08:47 AM

Polypeptide

Genbank accession no. AAB59513

Other Designations: meconium antigen 100

5 ANTIBODIES

AstraZeneca-MedImmune:US 20100330103; US20080057063;
US20020142359

- for example an antibody having complementarity determining regions (CDRs) with the following sequences: heavy chain; CDR1 - DNYMH, CDR2 - WIDPENGDT E YAPKFRG, CDR3 - LIYAGYLAMD Y; and light chain CDR1 - SASSSVTYMH, CDR2 - STSNLAS, CDR3 - QQRSTYPLT.
- Hybridoma 806.077 deposited as European Collection of Cell Cultures (ECACC) deposit no. 96022936.

15 Research Corporation Technologies, Inc.:US5,047,507

Bayer Corporation: US6,013,772

BioAlliance: US7,982,017; US7,674,605

- 20 • US 7,674,605
 - an antibody comprising the heavy chain variable region sequence from the amino acid sequence of SEQ ID NO: 1, and the light chain variable region sequence from the amino acid sequence of SEQ ID NO:2.
 - an antibody comprising the heavy chain variable region sequence from the amino acid sequence of SEQ ID NO:5, and the light chain variable region sequence from the amino acid sequence of SEQ ID NO:6.

Celltech Therapeutics Limited: US5,877,293

30 The Dow Chemical Company: US5,472,693; US6,417,337; US6,333,405
US5,472,693 – for example, ATCC No. CRL-11215
US6,417,337 – for example, ATCC CRL-12208
US6,333,405 – for example, ATCC CRL-12208

35 Immunomedics, Inc: US7,534,431; US7,230,084; US7,300,644; US6,730,300;
US20110189085

- an antibody having CDRs of the light chain variable region comprise:
CDR1 comprises KASQDVGTSA (SEQ ID NO: 20); CDR2 comprises
WTSTRHT (SEQ ID NO: 21); and CDR3 comprises QQYSLYRS (SEQ ID
NO: 22);
- 5 and the CDRs of the heavy chain variable region of said anti-CEA
antibody comprise: CDR1 comprises TYWMS (SEQ ID NO: 23); CDR2
comprises EIHPDSSTINYAPSLKD (SEQ ID NO: 24); and CDR3
comprises LYFGFPWFAY (SEQ ID NO: 25).

US20100221175; US20090092598; US20070202044; US20110064653;

10 US20090185974; US20080069775.

(42) MET (*met proto-oncogene; hepatocyte growth factor receptor*)

Nucleotide

Genbank accession no M35073

15 Genbank version no. M35073.1 GI:187553

Genbank record update date: Mar 6, 2012 11:12 AM

Polypeptide

Genbank accession no. AAA59589

10 ANTIBODIES:

US7,628,986 and US7,736,644 (Amgen)

For example, a heavy chain variable region amino acid sequence selected from the group consisting of SEQ ID NO: 142 and variants & a light chain variable region amino acid sequence selected from the group consisting of: SEQ ID NO: 144 and
15 variants.

US20100111979 (Amgen)

For example, an antibody comprising a heavy chain amino acid sequence comprising:

20 CDR1 consisting of a sequence selected from the group consisting of the amino acid sequences for the CDR1 region of antibodies 13.1.2 (SEQ ID NO: 138), 131 (SEQ ID NO: 2), 170 (SEQ ID NO: 4), 150 (SEQ ID NO: 5), 095 (SEQ ID NO: 7), 250 (SEQ ID NO: 9), 139 (SEQ ID NO: 10), 211 (SEQ ID NO: 12), 124 (SEQ ID NO: 13), 318 (SEQ ID NO: 15), 342 (SEQ ID NO: 16), and 333 (SEQ ID NO: 17);

25 CDR2 consisting of a sequence selected from the group consisting of the amino acid sequences for the CDR2 region of antibodies 13.1.2 (SEQ ID NO: 138), 131 (SEQ ID NO: 2), 170 (SEQ ID NO: 4), 150 (SEQ ID NO: 5), 095 (SEQ ID NO: 7), 250 (SEQ ID NO: 9), 139 (SEQ ID NO: 10), 211 (SEQ ID NO: 12), 124 (SEQ ID NO: 13), 318 (SEQ ID NO: 15), 342 (SEQ ID NO: 16), and 333 (SEQ ID NO: 17); and

30 CDR3 consisting of a sequence selected from the group consisting of the amino acid sequences for the CDR3 region of antibodies 13.1.2 (SEQ ID NO: 138), 131 (SEQ ID NO: 2), 170 (SEQ ID NO: 4), 150 (SEQ ID NO: 5), 095 (SEQ ID NO: 7), 250 (SEQ ID NO: 9), 139 (SEQ ID NO: 10), 211 (SEQ ID NO: 12), 124 (SEQ ID NO: 13), 318 (SEQ ID NO: 15), 342 (SEQ ID NO: 16), and 333 (SEQ ID NO: 17).

35

US20090240038 (Amgen)

For example, an antibody having at least one of the heavy or light chain polypeptides comprises an amino acid sequence that is at least 90% identical to the amino acid sequence selected from the group consisting of: SEQ ID NO: 2, SEQ ID NO: 19, SEQ ID NO: 142, SEQ ID NO: 144, and any combination thereof.

5

US20090175887 (Amgen)

For example, an antibody having a heavy chain amino acid sequence selected from the group consisting of the heavy chain amino acid sequence of antibody 13.1.2 (SEQ ID NO: 138), 131 (SEQ ID NO: 2), 170 (SEQ ID NO: 4), 150 (SEQ ID NO: 5), 095 (SEQ ID NO: 7), 250 (SEQ ID NO: 9), 139 (SEQ ID NO: 10), 211 (SEQ ID NO: 12), 124 (SEQ ID NO: 13), 318 (SEQ ID NO: 15), 342 (SEQ ID NO: 16), and 333 (SEQ ID NO: 17).

10

US20090156790 (Amgen)

For example, antibody having heavy chain polypeptide and a light chain polypeptide, wherein at least one of the heavy or light chain polypeptides comprises an amino acid sequence that is at least 90% identical to the amino acid sequence selected from the group consisting of: SEQ ID NO: 2, SEQ ID NO: 19, SEQ ID NO: 142, SEQ ID NO: 144, and any combination thereof.

20

US20090155282, US20050059087 and US20050053608 (Amgen)

For example, an antibody heavy chain amino acid sequence selected from the group consisting of the heavy chain amino acid sequence of antibody 13.1.2 (SEQ ID NO: 138), 131 (SEQ ID NO: 2), 170 (SEQ ID NO: 4), 150 (SEQ ID NO: 5), 095 (SEQ ID NO: 7), 250 (SEQ ID NO: 9), 139 (SEQ ID NO: 10), 211 (SEQ ID NO: 12), 124 (SEQ ID NO: 13), 318 (SEQ ID NO: 15), 342 (SEQ ID NO: 16), and 333 (SEQ ID NO: 17).

25

MR1-1 (US7,129,332; Duke)

For example, a variant antibody having the sequence of SEQ ID NO.18 with the substitutions S98P-T99Y in the CDR3 VH, and F92W in CDR3 VL.

30

L8A4, H10, Y10 (Wikstrand CJ., et al *Cancer Res.* 1995 Jul 15;55(14):3140-8; Duke)

US20090311803 (Harvard University)

For example, SEQ ID NO:9 for antibody heavy chain variable region, and SEQ ID NO: 3 for light chain variable region amino acid sequences

35

US20070274991 (EMD72000, also known as matuzumab; Harvard University)

For example, SEQ ID NOs: 3 & 9 for light chain and heavy chain respectively

5 US6,129,915 (Schering)

For example, SEQ. ID NOs: 1, 2, 3, 4, 5 and 6.

(72) *CD37 (CD37 molecule)*

Nucleotide

Genbank accession no. NM_001040031

Genbank version no. NM_001040031.1 GI:91807109

30 Genbank record update date: Jul 29, 2012 02:08 PM

Polypeptide

Genbank accession no. NP_001035120

Genbank version no. NP_001035120.1 GI:91807110

35 Genbank record update date: Jul 29, 2012 02:08 PM

Cross-references

Schwartz-Albiez R., et al *J. Immunol.* 140 (3), 905-914 (1988)

Other information

5 Official Symbol: CD37

Other Aliases: GP52-40, TSPAN26

Other Designations: CD37 antigen; cell differentiation antigen 37; leukocyte antigen CD37; leukocyte surface antigen CD37; tetraspanin-26; tspan-26

10 **ANTIBODIES**

Boehringer Ingelheim: mAb 37.1 (Heider KH., et al *Blood.* 2011 Oct 13;118(15):4159-68)

Trubion: CD37-SMIP (G28-1 scFv-Ig) ((Zhao X., et al *Blood.* 2007;110: 2569-2577)

For example, see US20110171208A1 SEQ ID NO: 253

15

Immunogen: K7153A (Deckert J., et al *Cancer Res* April 15, 2012; 72(8 Supplement): 4625)

(73) CD138 – SDC1 (syndecan 1)

Nucleotide

20 Genbank accession no. AJ551176

Genbank version no. AJ551176.1 GI:29243141

Genbank record update date: Feb 01, 2011 12:09 PM

Polypeptide

25 Genbank accession no. CAD80245

Genbank version no. CAD80245.1 GI:29243142

Genbank record update date: Feb 01, 2011 12:09 PM

Cross-references

30 O'Connell FP., et al *Am J Clin Pathol.* 2004 Feb;121(2):254-63

Other information

Official Symbol: SDC1

Other Aliases: CD138, SDC, SYND1, syndecan

35 Other Designations: CD138 antigen; heparan sulfate proteoglycan fibroblast growth factor receptor; syndecan proteoglycan 1; syndecan-1

ANTIBODIES

Biotech: chimerized MAb (nBT062) - (Jagannath S., et al Poster *ASH* #3060, 2010; WIPO Patent Application WO/2010/128087)

For example, see US20090232810 SEQ ID NO: 1 and 2

5

Immunogen: B-B4 (Tassone P., et al *Blood* 104_3688-3696)

For example, see US20090175863A1 SEQ ID NO: 1 and 2

(74) *CD74 (CD74 molecule, major histocompatibility complex, class II invariant chain)*

10 Nucleotide

Genbank accession no. NM_004355

Genbank version no. NM_004355.1 GI:343403784

Genbank record update date: Sep 23, 2012 02:30 PM

15 Polypeptide

Genbank accession no. NP_004346

Genbank version no. NP_004346.1 GI:10835071

Genbank record update date: Sep 23, 2012 02:30 PM

20 Cross-references

Kudo, J., et al *Nucleic Acids Res.* 13 (24), 8827-8841 (1985)

Other information

Official Symbol: CD74

25 Other Aliases: DHLAG, HLADG, II, Ia-GAMMA

Other Designations: CD74 antigen (invariant polypeptide of major histocompatibility complex, class II antigen-associated); HLA class II histocompatibility antigen gamma chain; HLA-DR antigens-associated invariant chain; HLA-DR-gamma; Ia-associated invariant chain; MHC HLA-DR gamma chain; gamma chain of class II antigens; p33

30

ANTIBODIES

Immunomedics: hLL1 (Milatuzumab,) - Berkova Z., et al *Expert Opin Investig Drugs.* 2010 Jan;19(1):141-9)

For example, see US20040115193 SEQ ID NOs: 19, 20, 21, 22, 23 and 24

35

Genmab: HuMax-CD74 (see website)

(75) Claudins – CLs (Claudins)Cross-references

- Offner S., et al *Cancer Immunol Immunother.* 2005 May; 54(5):431-45, Suzuki H., et al *Ann*
 5 *N Y Acad Sci.* 2012 Jul;1258:65-70)

In humans, 24 members of the family have been described – see literature reference.

(76) EGFR (Epidermal growth factor receptor)10 Nucleotide

Genbank accession no. NM_005228

Genbank version no. NM_005228.3 GI:41927737

Genbank record update date: Sep 30, 2012 01:47 PM

15 Polypeptide

Genbank accession no. NP_005219

Genbank version no. NP_005219.2 GI:29725609

Genbank record update date: Sep 30, 2012 01:47 PM

20 Cross-references

Dhomen NS., et al *Crit Rev Oncog.* 2012;17(1):31-50

Other information

Official Symbol: EGFR

25 Other Aliases: ERBB, ERBB1, HER1, PIG61, mENA

Other Designations: avian erythroblastic leukemia viral (v-erb-b) oncogene homolog; cell growth inhibiting protein 40; cell proliferation-inducing protein 61; proto-oncogene c-ErbB-1; receptor tyrosine-protein kinase erbB-1

30 **ANTIBODIES**

BMS: Cetuximab (Erbix) - Broadbridge VT., et al *Expert Rev Anticancer Ther.* 2012 May;12(5):555-65.

For example, see US6217866 – ATTC deposit No. 9764.

35 Amgen: Panitumumab (Vectibix) - Argiles G., et al *Future Oncol.* 2012 Apr;8(4):373-89

For example, see US6235883 SEQ ID NOs: 23-38.

Genmab: Zalutumumab - Rivera F., et al *Expert Opin Biol Ther.* 2009 May;9(5):667-74.

YM Biosciences: Nimotuzumab - Ramakrishnan MS., et al *MAbs.* 2009 Jan-Feb;1(1):41-8.

5 For example, see US5891996 SEQ ID NOs: 27-34.

(77) *Her3 (ErbB3) – ERBB3 (v-erb-b2 erythroblastic leukemia viral oncogene homolog 3 (avian))*

Nucleotide

10 Genbank accession no. M34309

Genbank version no. M34309.1 GI:183990

Genbank record update date: Jun 23, 2010 08:47 PM

Polypeptide

15 Genbank accession no. AAA35979

Genbank version no. AAA35979.1 GI:306841

Genbank record update date: Jun 23, 2010 08:47 PM

Cross-references

20 Plowman, G.D., et al., *Proc. Natl. Acad. Sci. U.S.A.* 87 (13), 4905-4909 (1990)

Other information

Official Symbol: ERBB3

Other Aliases: ErbB-3, HER3, LCCS2, MDA-BF-1, c-erbB-3, c-erbB3, erbB3-S, p180-ErbB3,

25 p45-sErbB3, p85-sErbB3

Other Designations: proto-oncogene-like protein c-ErbB-3; receptor tyrosine-protein kinase erbB-3; tyrosine kinase-type cell surface receptor HER3

ANTIBODIES

30 Merimack Pharma : MM-121 (Schoeberl B., et al *Cancer Res.* 2010 Mar 15;70(6):2485-2494)

For example, see US2011028129 SEQ ID NOs: 1, 2, 3, 4, 5, 6, 7 and 8.

(78) *RON - MST1R (macrophage stimulating 1 receptor (c-met-related tyrosine kinase))*

35 Nucleotide

Genbank accession no. X70040

Genbank version no. X70040.1 GI:36109

Genbank record update date: Feb 02, 2011 10:17 PM

Polypeptide

5 Genbank accession no. CCA49634

Genbank version no. CCA49634.1 GI:36110

Genbank record update date: Feb 02, 2011 10:17 PM

Cross-references

10 Ronsin C., et al *Oncogene* 8 (5), 1195-1202 (1993)

Other information

Official Symbol: MST1R

Other Aliases: CD136, CDw136, PTK8, RON

15 Other Designations: MSP receptor; MST1R variant RON30; MST1R variant RON62; PTK8 protein tyrosine kinase 8; RON variant E2E3; c-met-related tyrosine kinase; macrophage-stimulating protein receptor; p185-Ron; soluble RON variant 1; soluble RON variant 2; soluble RON variant 3; soluble RONvariant 4

20 **(79)** *EPHA2 (EPH receptor A2)*

Nucleotide

Genbank accession no. BC037166

Genbank version no. BC037166.2 GI:33879863

Genbank record update date: Mar 06, 2012 01:59 PM

25

Polypeptide

Genbank accession no. AAH37166

Genbank version no. AAH37166.1 GI:22713539

Genbank record update date: Mar 06, 2012 01:59 PM

30

Cross-references

Strausberg R.L., et al *Proc. Natl. Acad. Sci. U.S.A.* 99 (26), 16899-16903 (2002)

Other information

35 Official Symbol: EPHA2

Other Aliases: ARCC2, CTPA, CTPP1, ECK

Other Designations: ephrin type-A receptor 2; epithelial cell receptor protein tyrosine kinase; soluble EPHA2 variant 1; tyrosine-protein kinase receptor ECK

ANTIBODIES

- 5 Medimmune: 1C1 (Lee JW., et al *Clin Cancer Res.* 2010 May 1;16(9):2562-2570)

For example, see US20090304721A1 Fig. 7 and 8.

(80) CD20 – MS4A1 (*membrane-spanning 4-domains, subfamily A, member 1*)

Nucleotide

- 10 Genbank accession no. M27394
Genbank version no. M27394.1 GI:179307
Genbank record update date: Nov 30, 2009 11:16 AM

Polypeptide

- 15 Genbank accession no. AAA35581
Genbank version no. AAA35581.1 GI:179308
Genbank record update date: Nov 30, 2009 11:16 AM

Cross-references

- 20 Tedder T.F., et al *Proc. Natl. Acad. Sci. U.S.A.* 85 (1), 208-212 (1988)

Other information

Official Symbol: MS4A1

Other Aliases: B1, Bp35, CD20, CVID5, LEU-16, MS4A2, S7

- 25 Other Designations: B-lymphocyte antigen CD20; B-lymphocyte cell-surface antigen B1;
CD20 antigen; CD20 receptor; leukocyte surface antigen Leu-16

ANTIBODIES

Genentech/Roche: Rituximab - Abdulla NE., et al *BioDrugs.* 2012 Apr 1;26(2):71-82.

- 30 For example, see US5736137, ATCC deposit No. HB-69119.

GSK/Genmab: Ofatumumab - Nightingale G., et al *Ann Pharmacother.* 2011
Oct;45(10):1248-55.

For example, see US20090169550A1 SEQ ID NOs: 2, 4 and 5.

Immunomedics: Veltuzumab - Goldenberg DM., et al *Leuk Lymphoma*. 2010 May;51(5):747-55.

For example, see US7919273B2 SEQ ID NOs: 1, 2, 3, 4, 5 and 6.

5 **(81) Tenascin C – TNC (Tenascin C)**

Nucleotide

Genbank accession no. NM_002160

Genbank version no. NM_002160.3 GI:340745336

Genbank record update date: Sep 23, 2012 02:33 PM

10

Polypeptide

Genbank accession no. NP_002151

Genbank version no. NP_002151.2 GI:153946395

Genbank record update date: Sep 23, 2012 02:33 PM

- 10 The parent antibody may also be a fusion protein comprising an albumin-binding peptide (ABP) sequence (Dennis *et al.* (2002) "Albumin Binding As A General Strategy For Improving The Pharmacokinetics Of Proteins" *J Biol Chem.* 277:35035-35043; WO 01/45746). Antibodies of the invention include fusion proteins with ABP sequences taught by: (i) Dennis *et al* (2002) *J Biol Chem.* 277:35035-35043 at Tables III and IV, page 35038;
15 (ii) US 2004/0001827 at [0076]; and (iii) WO 01/45746 at pages 12-13, and all of which are incorporated herein by reference.

In one embodiment, the antibody has been raised to target specific the tumour related antigen $\alpha_v\beta_6$.

20

The cell binding agent may be labelled, for example to aid detection or purification of the agent either prior to incorporation as a conjugate, or as part of the conjugate. The label may be a biotin label. In another embodiment, the cell binding agent may be labelled with a radioisotope.

25

Embodiments of the present invention include ConjA wherein the cell binding agent is selected from an antibody to any of the antigens discussed above.

- Embodiments of the present invention include ConjB wherein the cell binding agent is
30 selected from an antibody to any of the antigens discussed above.

Embodiments of the present invention include ConjA wherein the cell binding agent is selected from any of the antibodies discussed above.

- 35 Embodiments of the present invention include ConjB wherein the cell binding agent is selected from any of the antibodies discussed above.

The present invention may also relate to conjugates where the cell binding agent is selected from an antibody to any of the antigens discussed above and any of the antibodies discussed above linked to different drugs.

5

Drug loading

The drug loading is the average number of PBD drugs per cell binding agent, e.g. antibody. Where the compounds of the invention are bound to cysteines, drug loading may range from 1 to 8 drugs (D) per cell binding agent, i.e. where 1, 2, 3, 4, 5, 6, 7, and 8 drug moieties are covalently attached to the cell binding agent. Compositions of conjugates include collections of cell binding agents, e.g. antibodies, conjugated with a range of drugs, from 1 to 8.

10

Where the compounds of the invention are bound to lysines, drug loading may range from 1 to 80 drugs (D) per cell binding agent, although an upper limit of 40, 20, 10 or 8 may be preferred. Compositions of conjugates include collections of cell binding agents, e.g.

15

antibodies, conjugated with a range of drugs, from 1 to 80, 1 to 40, 1 to 20, 1 to 10 or 1 to 8.

The average number of drugs per antibody in preparations of ADC from conjugation reactions may be characterized by conventional means such as UV, reverse phase HPLC, HIC, mass spectroscopy, ELISA assay, and electrophoresis. The quantitative distribution of ADC in terms of p may also be determined. By ELISA, the averaged value of p in a particular preparation of ADC may be determined (Hamblett et al (2004) Clin. Cancer Res. 10:7063-7070; Sanderson et al (2005) Clin. Cancer Res. 11:843-852). However, the distribution of p (drug) values is not discernible by the antibody-antigen binding and detection limitation of ELISA. Also, ELISA assay for detection of antibody-drug conjugates does not determine where the drug moieties are attached to the antibody, such as the heavy chain or light chain fragments, or the particular amino acid residues. In some instances, separation, purification, and characterization of homogeneous ADC where p is a certain value from ADC with other drug loadings may be achieved by means such as reverse phase HPLC or electrophoresis. Such techniques are also applicable to other types of conjugates.

20

25

30

For some antibody-drug conjugates, p may be limited by the number of attachment sites on the antibody. For example, an antibody may have only one or several cysteine thiol groups, or may have only one or several sufficiently reactive thiol groups through which a linker may be attached. Higher drug loading, e.g. $p > 5$, may cause aggregation, insolubility, toxicity, or loss of cellular permeability of certain antibody-drug conjugates.

35

Typically, fewer than the theoretical maximum of drug moieties are conjugated to an antibody during a conjugation reaction. An antibody may contain, for example, many lysine residues that do not react with the drug-linker intermediate (D-L) or linker reagent. Only the most reactive lysine groups may react with an amine-reactive linker reagent. Also, only the most reactive cysteine thiol groups may react with a thiol-reactive linker reagent. Generally, antibodies do not contain many, if any, free and reactive cysteine thiol groups which may be linked to a drug moiety. Most cysteine thiol residues in the antibodies of the compounds exist as disulfide bridges and must be reduced with a reducing agent such as dithiothreitol (DTT) or TCEP, under partial or total reducing conditions. The loading (drug/antibody ratio) of an ADC may be controlled in several different manners, including: (i) limiting the molar excess of drug-linker intermediate (D-L) or linker reagent relative to antibody, (ii) limiting the conjugation reaction time or temperature, and (iii) partial or limiting reductive conditions for cysteine thiol modification.

Certain antibodies have reducible interchain disulfides, i.e. cysteine bridges. Antibodies may be made reactive for conjugation with linker reagents by treatment with a reducing agent such as DTT (dithiothreitol). Each cysteine bridge will thus form, theoretically, two reactive thiol nucleophiles. Additional nucleophilic groups can be introduced into antibodies through the reaction of lysines with 2-iminothiolane (Traut's reagent) resulting in conversion of an amine into a thiol. Reactive thiol groups may be introduced into the antibody (or fragment thereof) by engineering one, two, three, four, or more cysteine residues (e.g., preparing mutant antibodies comprising one or more non-native cysteine amino acid residues). US 7521541 teaches engineering antibodies by introduction of reactive cysteine amino acids.

Cysteine amino acids may be engineered at reactive sites in an antibody and which do not form intrachain or intermolecular disulfide linkages (Junutula, et al., 2008b Nature Biotech., 26(8):925-932; Dornan et al (2009) Blood 114(13):2721-2729; US 7521541; US 7723485; WO2009/052249). The engineered cysteine thiols may react with linker reagents or the drug-linker reagents of the present invention which have thiol-reactive, electrophilic groups such as maleimide or alpha-halo amides to form ADC with cysteine engineered antibodies and the PBD drug moieties. The location of the drug moiety can thus be designed, controlled, and known. The drug loading can be controlled since the engineered cysteine thiol groups typically react with thiol-reactive linker reagents or drug-linker reagents in high yield. Engineering an IgG antibody to introduce a cysteine amino acid by substitution at a single site on the heavy or light chain gives two new cysteines on the symmetrical antibody.

A drug loading near 2 can be achieved with near homogeneity of the conjugation product ADC.

Where more than one nucleophilic or electrophilic group of the antibody reacts with a drug-linker intermediate, or linker reagent followed by drug moiety reagent, then the resulting product is a mixture of ADC compounds with a distribution of drug moieties attached to an antibody, e.g. 1, 2, 3, etc. Liquid chromatography methods such as polymeric reverse phase (PLRP) and hydrophobic interaction (HIC) may separate compounds in the mixture by drug loading value. Preparations of ADC with a single drug loading value (p) may be isolated, however, these single loading value ADCs may still be heterogeneous mixtures because the drug moieties may be attached, via the linker, at different sites on the antibody.

Thus the antibody-drug conjugate compositions of the invention include mixtures of antibody-drug conjugate compounds where the antibody has one or more PBD drug moieties and where the drug moieties may be attached to the antibody at various amino acid residues.

In one embodiment, the average number of dimer pyrrolobenzodiazepine groups per cell binding agent is in the range 1 to 20. In some embodiments the range is selected from 1 to 8, 2 to 8, 2 to 6, 2 to 4, and 4 to 8.

In some embodiments, there is one dimer pyrrolobenzodiazepine group per cell binding agent.

Preferred Compounds

Particularly preferred compounds of the first aspect of the present invention include:

Particularly preferred compounds of the second aspect of the present invention include:

Particularly preferred compounds of the third aspect of the present invention include:

5

Substituents

The phrase “optionally substituted” as used herein, pertains to a parent group which may be unsubstituted or which may be substituted.

- 10 Unless otherwise specified, the term “substituted” as used herein, pertains to a parent group which bears one or more substituents. The term “substituent” is used herein in the conventional sense and refers to a chemical moiety which is covalently attached to, or if appropriate, fused to, a parent group. A wide variety of substituents are well known, and methods for their formation and introduction into a variety of parent groups are also well
- 15 known.

In a preferred embodiment, the substituents described herein (which include optional substituents) are limited to those groups that are not reactive to a cell binding agent. The link to the cell binding agent in the present case is formed from the bridge between the two

20 PBD moieties through a linker group to the cell binding agent. Reactive functional groups located at other parts of the PBD structure may be capable of forming additional bonds to the cell binding agent (this may be referred to as crosslinking). These additional bonds may alter transport and biological activity of the conjugate. Therefore, in some embodiment, the additional substituents are limited to those lacking reactive functionality.

25

In one embodiment, the substituents are selected from the group consisting of R, OR, SR, NRR', NO₂, halo, CO₂R, COR, CONH₂, CONHR, and CONRR'.

In one embodiment, the substituents are selected from the group consisting of R, OR, SR, NRR', NO₂, CO₂R, COR, CONH₂, CONHR, and CONRR'.

In one embodiment, the substituents are selected from the group consisting of R, OR, SR, NRR', NO₂, and halo.

In one embodiment, the substituents are selected from the group consisting of R, OR, SR, NRR', and NO₂.

- 5 Any one of the embodiment mentioned above may be applied to any one of the substituents described herein. Alternatively, the substituents may be selected from one or more of the groups listed below.

Examples of substituents are described in more detail below.

10

C₁₋₁₂ alkyl: The term "C₁₋₁₂ alkyl" as used herein, pertains to a monovalent moiety obtained by removing a hydrogen atom from a carbon atom of a hydrocarbon compound having from 1 to 12 carbon atoms, which may be aliphatic or alicyclic, and which may be saturated or unsaturated (e.g. partially unsaturated, fully unsaturated). Thus, the term "alkyl" includes the sub-classes alkenyl, alkynyl, cycloalkyl, etc., discussed below.

15

Examples of saturated alkyl groups include, but are not limited to, methyl (C₁), ethyl (C₂), propyl (C₃), butyl (C₄), pentyl (C₅), hexyl (C₆) and heptyl (C₇).

- 20 Examples of saturated linear alkyl groups include, but are not limited to, methyl (C₁), ethyl (C₂), n-propyl (C₃), n-butyl (C₄), n-pentyl (amyl) (C₅), n-hexyl (C₆) and n-heptyl (C₇).

Examples of saturated branched alkyl groups include iso-propyl (C₃), iso-butyl (C₄), sec-butyl (C₄), tert-butyl (C₄), iso-pentyl (C₅), and neo-pentyl (C₅).

25

An alkyl group may optionally be interrupted by one or more heteroatoms selected from O, N(H) and S. Such groups may be referred to as "heteroalkyl".

- 30 C₂₋₁₂ Heteroalkyl: The term "C₂₋₁₂ heteroalkyl" as used herein, pertains to a monovalent moiety obtained by removing a hydrogen atom from a carbon atom of a hydrocarbon compound having from 2 to 12 carbon atoms, and one or more heteroatoms selected from O, N(H) and S, preferably O and S.

- 35 Examples of heteroalkyl groups include, but are not limited to those comprising one or more ethylene glycol units of the type -(OCH₂CH₂)-. The terminal of a heteroalkyl group may be

the primary form of a heteroatom, e.g. -OH, -SH or -NH₂. In a preferred embodiment, the terminal is -CH₃.

C₂₋₁₂ Alkenyl: The term "C₂₋₁₂ alkenyl" as used herein, pertains to an alkyl group having one or more carbon-carbon double bonds.

Examples of unsaturated alkenyl groups include, but are not limited to, ethenyl (vinyl, -CH=CH₂), 1-propenyl (-CH=CH-CH₃), 2-propenyl (allyl, -CH-CH=CH₂), isopropenyl (1-methylvinyl, -C(CH₃)=CH₂), butenyl (C₄), pentenyl (C₅), and hexenyl (C₆).

C₂₋₁₂ alkynyl: The term "C₂₋₁₂ alkynyl" as used herein, pertains to an alkyl group having one or more carbon-carbon triple bonds.

Examples of unsaturated alkynyl groups include, but are not limited to, ethynyl (-C≡CH) and 2-propynyl (propargyl, -CH₂-C≡CH).

C₃₋₁₂ cycloalkyl: The term "C₃₋₁₂ cycloalkyl" as used herein, pertains to an alkyl group which is also a cyclyl group; that is, a monovalent moiety obtained by removing a hydrogen atom from an alicyclic ring atom of a cyclic hydrocarbon (carbocyclic) compound, which moiety has from 3 to 7 carbon atoms, including from 3 to 7 ring atoms.

Examples of cycloalkyl groups include, but are not limited to, those derived from:

saturated monocyclic hydrocarbon compounds:

cyclopropane (C₃), cyclobutane (C₄), cyclopentane (C₅), cyclohexane (C₆), cycloheptane (C₇), methylcyclopropane (C₄), dimethylcyclopropane (C₅), methylcyclobutane (C₅), dimethylcyclobutane (C₆), methylcyclopentane (C₆), dimethylcyclopentane (C₇) and methylcyclohexane (C₇);

unsaturated monocyclic hydrocarbon compounds:

cyclopropene (C₃), cyclobutene (C₄), cyclopentene (C₅), cyclohexene (C₆), methylcyclopropene (C₄), dimethylcyclopropene (C₅), methylcyclobutene (C₅), dimethylcyclobutene (C₆), methylcyclopentene (C₆), dimethylcyclopentene (C₇) and methylcyclohexene (C₇); and

saturated polycyclic hydrocarbon compounds:

norcarane (C₇), norpinane (C₇), norbornane (C₇).

C₃₋₂₀ heterocyclyl: The term "C₃₋₂₀ heterocyclyl" as used herein, pertains to a monovalent moiety obtained by removing a hydrogen atom from a ring atom of a heterocyclic compound, which moiety has from 3 to 20 ring atoms, of which from 1 to 10 are ring heteroatoms. Preferably, each ring has from 3 to 7 ring atoms, of which from 1 to 4 are ring heteroatoms.

5

In this context, the prefixes (e.g. C₃₋₂₀, C₃₋₇, C₅₋₆, etc.) denote the number of ring atoms, or range of number of ring atoms, whether carbon atoms or heteroatoms. For example, the term "C₅₋₆heterocyclyl", as used herein, pertains to a heterocyclyl group having 5 or 6 ring atoms.

10

Examples of monocyclic heterocyclyl groups include, but are not limited to, those derived from:

N₁: aziridine (C₃), azetidine (C₄), pyrrolidine (tetrahydropyrrole) (C₅), pyrroline (e.g., 3-pyrroline, 2,5-dihydropyrrole) (C₅), 2H-pyrrole or 3H-pyrrole (isopyrrole, isoazole) (C₅), piperidine (C₆), dihydropyridine (C₆), tetrahydropyridine (C₆), azepine (C₇);

15

O₁: oxirane (C₃), oxetane (C₄), oxolane (tetrahydrofuran) (C₅), oxole (dihydrofuran) (C₅), oxane (tetrahydropyran) (C₆), dihydropyran (C₆), pyran (C₆), oxepin (C₇);

S₁: thiirane (C₃), thietane (C₄), thiolane (tetrahydrothiophene) (C₅), thiane (tetrahydrothiopyran) (C₆), thiepane (C₇);

20

O₂: dioxolane (C₅), dioxane (C₆), and dioxepane (C₇);

O₃: trioxane (C₆);

N₂: imidazolidine (C₅), pyrazolidine (diazolidine) (C₅), imidazoline (C₅), pyrazoline (dihydropyrazole) (C₅), piperazine (C₆);

N₁O₁: tetrahydrooxazole (C₅), dihydrooxazole (C₅), tetrahydroisoxazole (C₅),

25

dihydroisoxazole (C₅), morpholine (C₆), tetrahydrooxazine (C₆), dihydrooxazine (C₆), oxazine (C₆);

N₁S₁: thiazoline (C₅), thiazolidine (C₅), thiomorpholine (C₆);

N₂O₁: oxadiazine (C₆);

O₁S₁: oxathiole (C₅) and oxathiane (thioxane) (C₆); and,

30

N₁O₁S₁: oxathiazine (C₆).

Examples of substituted monocyclic heterocyclyl groups include those derived from saccharides, in cyclic form, for example, furanoses (C₅), such as arabinofuranose, lyxofuranose, ribofuranose, and xylofuranse, and pyranoses (C₆), such as allopyranose, altropyranose, glucopyranose, mannopyranose, gulopyranose, idopyranose, galactopyranose, and talopyranose.

35

C₅₋₂₀ aryl: The term “C₅₋₂₀ aryl”, as used herein, pertains to a monovalent moiety obtained by removing a hydrogen atom from an aromatic ring atom of an aromatic compound, which moiety has from 3 to 20 ring atoms. Preferably, each ring has from 5 to 7 ring atoms.

5

In this context, the prefixes (e.g. C₃₋₂₀, C₅₋₇, C₅₋₆, etc.) denote the number of ring atoms, or range of number of ring atoms, whether carbon atoms or heteroatoms. For example, the term “C₅₋₆ aryl” as used herein, pertains to an aryl group having 5 or 6 ring atoms.

10 The ring atoms may be all carbon atoms, as in “carboaryl groups”.

Examples of carboaryl groups include, but are not limited to, those derived from benzene (i.e. phenyl) (C₆), naphthalene (C₁₀), azulene (C₁₀), anthracene (C₁₄), phenanthrene (C₁₄), naphthacene (C₁₈), and pyrene (C₁₆).

15 Examples of aryl groups which comprise fused rings, at least one of which is an aromatic ring, include, but are not limited to, groups derived from indane (e.g. 2,3-dihydro-1H-indene) (C₉), indene (C₉), isoindene (C₉), tetraline (1,2,3,4-tetrahydronaphthalene (C₁₀), acenaphthene (C₁₂), fluorene (C₁₃), phenalene (C₁₃), acephenanthrene (C₁₅), and aceanthrene (C₁₆).

20

Alternatively, the ring atoms may include one or more heteroatoms, as in “heteroaryl groups”. Examples of monocyclic heteroaryl groups include, but are not limited to, those derived from:

N₁: pyrrole (azole) (C₅), pyridine (azine) (C₆);

25 O₁: furan (oxole) (C₅);

S₁: thiophene (thiole) (C₅);

N₁O₁: oxazole (C₅), isoxazole (C₅), isoxazine (C₆);

N₂O₁: oxadiazole (furazan) (C₅);

N₃O₁: oxatriazole (C₅);

30 N₁S₁: thiazole (C₅), isothiazole (C₅);

N₂: imidazole (1,3-diazole) (C₅), pyrazole (1,2-diazole) (C₅), pyridazine (1,2-diazine) (C₆), pyrimidine (1,3-diazine) (C₆) (e.g., cytosine, thymine, uracil), pyrazine (1,4-diazine) (C₆);

N₃: triazole (C₅), triazine (C₆); and,

N₄: tetrazole (C₅).

35

Examples of heteroaryl which comprise fused rings, include, but are not limited to:

- C₉ (with 2 fused rings) derived from benzofuran (O₁), isobenzofuran (O₁), indole (N₁), isoindole (N₁), indolizine (N₁), indoline (N₁), isoindoline (N₁), purine (N₄) (e.g., adenine, guanine), benzimidazole (N₂), indazole (N₂), benzoxazole (N₁O₁), benzisoxazole (N₁O₁), benzodioxole (O₂), benzofurazan (N₂O₁), benzotriazole (N₃), benzothiofuran (S₁),
- 5 benzothiazole (N₁S₁), benzothiadiazoole (N₂S);
- C₁₀ (with 2 fused rings) derived from chromene (O₁), isochromene (O₁), chroman (O₁), isochroman (O₁), benzodioxan (O₂), quinoline (N₁), isoquinoline (N₁), quinolizine (N₁), benzoxazine (N₁O₁), benzodiazine (N₂), pyridopyridine (N₂), quinoxaline (N₂), quinazoline (N₂), cinnoline (N₂), phthalazine (N₂), naphthyridine (N₂), pteridine (N₄);
- 10 C₁₁ (with 2 fused rings) derived from benzodiazepine (N₂);
- C₁₃ (with 3 fused rings) derived from carbazole (N₁), dibenzofuran (O₁), dibenzothiophene (S₁), carboline (N₂), perimidine (N₂), pyridoindole (N₂); and,
- C₁₄ (with 3 fused rings) derived from acridine (N₁), xanthene (O₁), thioxanthene (S₁), oxanthrene (O₂), phenoxathiin (O₁S₁), phenazine (N₂), phenoxazine (N₁O₁), phenothiazine (N₁S₁), thianthrene (S₂), phenanthridine (N₁), phenanthroline (N₂), phenazine (N₂).
- 15

The above groups, whether alone or part of another substituent, may themselves optionally be substituted with one or more groups selected from themselves and the additional substituents listed below.

20

Halo: -F, -Cl, -Br, and -I.

Hydroxy: -OH.

- 25 Ether: -OR, wherein R is an ether substituent, for example, a C₁₋₇ alkyl group (also referred to as a C₁₋₇ alkoxy group, discussed below), a C₃₋₂₀ heterocyclyl group (also referred to as a C₃₋₂₀ heterocycloxy group), or a C₅₋₂₀ aryl group (also referred to as a C₅₋₂₀ aryloxy group), preferably a C₁₋₇alkyl group.

- 30 Alkoxy: -OR, wherein R is an alkyl group, for example, a C₁₋₇ alkyl group. Examples of C₁₋₇ alkoxy groups include, but are not limited to, -OMe (methoxy), -OEt (ethoxy), -O(nPr) (n-propoxy), -O(iPr) (isopropoxy), -O(nBu) (n-butoxy), -O(sBu) (sec-butoxy), -O(iBu) (isobutoxy), and -O(tBu) (tert-butoxy).

- 35 Acetal: -CH(OR¹)(OR²), wherein R¹ and R² are independently acetal substituents, for example, a C₁₋₇ alkyl group, a C₃₋₂₀ heterocyclyl group, or a C₅₋₂₀ aryl group, preferably a C₁₋₇

alkyl group, or, in the case of a "cyclic" acetal group, R^1 and R^2 , taken together with the two oxygen atoms to which they are attached, and the carbon atoms to which they are attached, form a heterocyclic ring having from 4 to 8 ring atoms. Examples of acetal groups include, but are not limited to, $-\text{CH}(\text{OMe})_2$, $-\text{CH}(\text{OEt})_2$, and $-\text{CH}(\text{OMe})(\text{OEt})$.

5

Hemiacetal: $-\text{CH}(\text{OH})(\text{OR}^1)$, wherein R^1 is a hemiacetal substituent, for example, a C_{1-7} alkyl group, a C_{3-20} heterocyclyl group, or a C_{5-20} aryl group, preferably a C_{1-7} alkyl group. Examples of hemiacetal groups include, but are not limited to, $-\text{CH}(\text{OH})(\text{OMe})$ and $-\text{CH}(\text{OH})(\text{OEt})$.

10

Ketal: $-\text{CR}(\text{OR}^1)(\text{OR}^2)$, where R^1 and R^2 are as defined for acetals, and R is a ketal substituent other than hydrogen, for example, a C_{1-7} alkyl group, a C_{3-20} heterocyclyl group, or a C_{5-20} aryl group, preferably a C_{1-7} alkyl group. Examples ketal groups include, but are not limited to, $-\text{C}(\text{Me})(\text{OMe})_2$, $-\text{C}(\text{Me})(\text{OEt})_2$, $-\text{C}(\text{Me})(\text{OMe})(\text{OEt})$, $-\text{C}(\text{Et})(\text{OMe})_2$, $-\text{C}(\text{Et})(\text{OEt})_2$, and $-\text{C}(\text{Et})(\text{OMe})(\text{OEt})$.

15

Hemiketal: $-\text{CR}(\text{OH})(\text{OR}^1)$, where R^1 is as defined for hemiacetals, and R is a hemiketal substituent other than hydrogen, for example, a C_{1-7} alkyl group, a C_{3-20} heterocyclyl group, or a C_{5-20} aryl group, preferably a C_{1-7} alkyl group. Examples of hemiacetal groups include, but are not limited to, $-\text{C}(\text{Me})(\text{OH})(\text{OMe})$, $-\text{C}(\text{Et})(\text{OH})(\text{OMe})$, $-\text{C}(\text{Me})(\text{OH})(\text{OEt})$, and $-\text{C}(\text{Et})(\text{OH})(\text{OEt})$.

20

Oxo (keto, -one): $=\text{O}$.

25

Thione (thioketone): $=\text{S}$.

Imino (imine): $=\text{NR}$, wherein R is an imino substituent, for example, hydrogen, C_{1-7} alkyl group, a C_{3-20} heterocyclyl group, or a C_{5-20} aryl group, preferably hydrogen or a C_{1-7} alkyl group. Examples of ester groups include, but are not limited to, $=\text{NH}$, $=\text{NMe}$, $=\text{NEt}$, and $=\text{NPh}$.

30

Formyl (carbaldehyde, carboxaldehyde): $-\text{C}(=\text{O})\text{H}$.

Acyl (keto): $-\text{C}(=\text{O})\text{R}$, wherein R is an acyl substituent, for example, a C_{1-7} alkyl group (also referred to as C_{1-7} alkylacyl or C_{1-7} alkanoyl), a C_{3-20} heterocyclyl group (also referred to as C_{3-20} heterocyclylacyl), or a C_{5-20} aryl group (also referred to as C_{5-20} arylacyl), preferably a

35

C₁₋₇ alkyl group. Examples of acyl groups include, but are not limited to, -C(=O)CH₃ (acetyl), -C(=O)CH₂CH₃ (propionyl), -C(=O)C(CH₃)₃ (t-butyryl), and -C(=O)Ph (benzoyl, phenone).

Carboxy (carboxylic acid): -C(=O)OH.

5

Thiocarboxy (thiocarboxylic acid): -C(=S)SH.

Thiolocarboxy (thiolocarboxylic acid): -C(=O)SH.

10 Thionocarboxy (thionocarboxylic acid): -C(=S)OH.

Imidic acid: -C(=NH)OH.

Hydroxamic acid: -C(=NOH)OH.

15

Ester (carboxylate, carboxylic acid ester, oxycarbonyl): -C(=O)OR, wherein R is an ester substituent, for example, a C₁₋₇ alkyl group, a C₃₋₂₀ heterocyclyl group, or a C₅₋₂₀ aryl group, preferably a C₁₋₇ alkyl group. Examples of ester groups include, but are not limited to, -C(=O)OCH₃, -C(=O)OCH₂CH₃, -C(=O)OC(CH₃)₃, and -C(=O)OPh.

20

Acyloxy (reverse ester): -OC(=O)R, wherein R is an acyloxy substituent, for example, a C₁₋₇ alkyl group, a C₃₋₂₀ heterocyclyl group, or a C₅₋₂₀ aryl group, preferably a C₁₋₇ alkyl group. Examples of acyloxy groups include, but are not limited to, -OC(=O)CH₃ (acetoxyl), -OC(=O)CH₂CH₃, -OC(=O)C(CH₃)₃, -OC(=O)Ph, and -OC(=O)CH₂Ph.

25

Oxycarboxyloxy: -OC(=O)OR, wherein R is an ester substituent, for example, a C₁₋₇ alkyl group, a C₃₋₂₀ heterocyclyl group, or a C₅₋₂₀ aryl group, preferably a C₁₋₇ alkyl group. Examples of ester groups include, but are not limited to, -OC(=O)OCH₃, -OC(=O)OCH₂CH₃, -OC(=O)OC(CH₃)₃, and -OC(=O)OPh.

30

Amino: -NR¹R², wherein R¹ and R² are independently amino substituents, for example, hydrogen, a C₁₋₇ alkyl group (also referred to as C₁₋₇ alkylamino or di-C₁₋₇ alkylamino), a C₃₋₂₀ heterocyclyl group, or a C₅₋₂₀ aryl group, preferably H or a C₁₋₇ alkyl group, or, in the case of a "cyclic" amino group, R¹ and R², taken together with the nitrogen atom to which they are attached, form a heterocyclic ring having from 4 to 8 ring atoms. Amino groups may be primary (-NH₂), secondary (-NHR¹), or tertiary (-NHR¹R²), and in cationic form, may be

35

quaternary ($-^+NR^1R^2R^3$). Examples of amino groups include, but are not limited to, $-NH_2$, $-NHCH_3$, $-NHC(CH_3)_2$, $-N(CH_3)_2$, $-N(CH_2CH_3)_2$, and $-NHPh$. Examples of cyclic amino groups include, but are not limited to, aziridino, azetidino, pyrrolidino, piperidino, piperazino, morpholino, and thiomorpholino.

5

Amido (carbamoyl, carbamyl, aminocarbonyl, carboxamide): $-C(=O)NR^1R^2$, wherein R^1 and R^2 are independently amino substituents, as defined for amino groups. Examples of amido groups include, but are not limited to, $-C(=O)NH_2$, $-C(=O)NHCH_3$, $-C(=O)N(CH_3)_2$, $-C(=O)NHCH_2CH_3$, and $-C(=O)N(CH_2CH_3)_2$, as well as amido groups in which R^1 and R^2 , together with the nitrogen atom to which they are attached, form a heterocyclic structure as in, for example, piperidinocarbonyl, morpholinocarbonyl, thiomorpholinocarbonyl, and piperazinocarbonyl.

10

Thioamido (thiocarbamyl): $-C(=S)NR^1R^2$, wherein R^1 and R^2 are independently amino substituents, as defined for amino groups. Examples of amido groups include, but are not limited to, $-C(=S)NH_2$, $-C(=S)NHCH_3$, $-C(=S)N(CH_3)_2$, and $-C(=S)NHCH_2CH_3$.

15

Acylamido (acylamino): $-NR^1C(=O)R^2$, wherein R^1 is an amide substituent, for example, hydrogen, a C_{1-7} alkyl group, a C_{3-20} heterocyclyl group, or a C_{5-20} aryl group, preferably hydrogen or a C_{1-7} alkyl group, and R^2 is an acyl substituent, for example, a C_{1-7} alkyl group, a C_{3-20} heterocyclyl group, or a C_{5-20} aryl group, preferably hydrogen or a C_{1-7} alkyl group. Examples of acylamide groups include, but are not limited to, $-NHC(=O)CH_3$, $-NHC(=O)CH_2CH_3$, and $-NHC(=O)Ph$. R^1 and R^2 may together form a cyclic structure, as in, for example, succinimidyl, maleimidyl, and phthalimidyl:

20

25

Aminocarbonyloxy: $-OC(=O)NR^1R^2$, wherein R^1 and R^2 are independently amino substituents, as defined for amino groups. Examples of aminocarbonyloxy groups include, but are not limited to, $-OC(=O)NH_2$, $-OC(=O)NHMe$, $-OC(=O)NMe_2$, and $-OC(=O)NEt_2$.

30

Ureido: $-N(R^1)CONR^2R^3$ wherein R^2 and R^3 are independently amino substituents, as defined for amino groups, and R^1 is a ureido substituent, for example, hydrogen, a C_{1-7} alkyl

group, a C₃₋₂₀ heterocyclyl group, or a C₅₋₂₀ aryl group, preferably hydrogen or a C₁₋₇ alkyl group. Examples of ureido groups include, but are not limited to, -NHCONH₂, -NHCONHMe, -NHCONHEt, -NHCONMe₂, -NHCONEt₂, -NMeCONH₂, -NMeCONHMe, -NMeCONHEt, -NMeCONMe₂, and -NMeCONEt₂.

5

Guanidino: -NH-C(=NH)NH₂.

Tetrazolyl: a five membered aromatic ring having four nitrogen atoms and one carbon atom,

10

Imino: =NR, wherein R is an imino substituent, for example, for example, hydrogen, a C₁₋₇ alkyl group, a C₃₋₂₀ heterocyclyl group, or a C₅₋₂₀ aryl group, preferably H or a C₁₋₇alkyl group. Examples of imino groups include, but are not limited to, =NH, =NMe, and =NEt.

- 15 Amidine (amidino): -C(=NR)NR₂, wherein each R is an amidine substituent, for example, hydrogen, a C₁₋₇ alkyl group, a C₃₋₂₀ heterocyclyl group, or a C₅₋₂₀ aryl group, preferably H or a C₁₋₇ alkyl group. Examples of amidine groups include, but are not limited to, -C(=NH)NH₂, -C(=NH)NMe₂, and -C(=NMe)NMe₂.

- 20 Nitro: -NO₂.

Nitroso: -NO.

Azido: -N₃.

25

Cyano (nitrile, carbonitrile): -CN.

Isocyano: -NC.

- 30 Cyanato: -OCN.

Isocyanato: -NCO.

Thiocyano (thiocyanato): -SCN.

Isothiocyano (isothiocyanato): -NCS.

Sulfhydryl (thiol, mercapto): -SH.

5

Thioether (sulfide): -SR, wherein R is a thioether substituent, for example, a C₁₋₇ alkyl group (also referred to as a C₁₋₇alkylthio group), a C₃₋₂₀ heterocyclyl group, or a C₅₋₂₀ aryl group, preferably a C₁₋₇ alkyl group. Examples of C₁₋₇ alkylthio groups include, but are not limited to, -SCH₃ and -SCH₂CH₃.

10

Disulfide: -SS-R, wherein R is a disulfide substituent, for example, a C₁₋₇ alkyl group, a C₃₋₂₀ heterocyclyl group, or a C₅₋₂₀ aryl group, preferably a C₁₋₇ alkyl group (also referred to herein as C₁₋₇ alkyl disulfide). Examples of C₁₋₇ alkyl disulfide groups include, but are not limited to, -SSCH₃ and -SSCH₂CH₃.

15

Sulfine (sulfinyl, sulfoxide): -S(=O)R, wherein R is a sulfine substituent, for example, a C₁₋₇ alkyl group, a C₃₋₂₀ heterocyclyl group, or a C₅₋₂₀ aryl group, preferably a C₁₋₇ alkyl group. Examples of sulfine groups include, but are not limited to, -S(=O)CH₃ and -S(=O)CH₂CH₃.

20

Sulfone (sulfonyl): -S(=O)₂R, wherein R is a sulfone substituent, for example, a C₁₋₇ alkyl group, a C₃₋₂₀ heterocyclyl group, or a C₅₋₂₀ aryl group, preferably a C₁₋₇ alkyl group, including, for example, a fluorinated or perfluorinated C₁₋₇ alkyl group. Examples of sulfone groups include, but are not limited to, -S(=O)₂CH₃ (methanesulfonyl, mesyl), -S(=O)₂CF₃ (triflyl), -S(=O)₂CH₂CH₃ (esyl), -S(=O)₂C₄F₉ (nonafllyl), -S(=O)₂CH₂CF₃ (tresyl), -S(=O)₂CH₂CH₂NH₂ (tauryl), -S(=O)₂Ph (phenylsulfonyl, besyl), 4-methylphenylsulfonyl (tosyl), 4-chlorophenylsulfonyl (closyl), 4-bromophenylsulfonyl (brosyl), 4-nitrophenyl (nosyl), 2-naphthalenesulfonate (napsyl), and 5-dimethylamino-naphthalen-1-ylsulfonate (dansyl).

25

Sulfinic acid (sulfinio): -S(=O)OH, -SO₂H.

30

Sulfonic acid (sulfo): -S(=O)₂OH, -SO₃H.

Sulfinate (sulfinic acid ester): -S(=O)OR; wherein R is a sulfinate substituent, for example, a C₁₋₇ alkyl group, a C₃₋₂₀ heterocyclyl group, or a C₅₋₂₀ aryl group, preferably a C₁₋₇ alkyl group.

35

Examples of sulfinate groups include, but are not limited to, -S(=O)OCH₃ (methoxysulfinyl; methyl sulfinate) and -S(=O)OCH₂CH₃ (ethoxysulfinyl; ethyl sulfinate).

Sulfonate (sulfonic acid ester): $-S(=O)_2OR$, wherein R is a sulfonate substituent, for example, a C_{1-7} alkyl group, a C_{3-20} heterocyclyl group, or a C_{5-20} aryl group, preferably a C_{1-7} alkyl group. Examples of sulfonate groups include, but are not limited to, $-S(=O)_2OCH_3$ (methoxysulfonyl; methyl sulfonate) and $-S(=O)_2OCH_2CH_3$ (ethoxysulfonyl; ethyl sulfonate).

Sulfinyloxy: $-OS(=O)R$, wherein R is a sulfinyloxy substituent, for example, a C_{1-7} alkyl group, a C_{3-20} heterocyclyl group, or a C_{5-20} aryl group, preferably a C_{1-7} alkyl group. Examples of sulfinyloxy groups include, but are not limited to, $-OS(=O)CH_3$ and $-OS(=O)CH_2CH_3$.

Sulfonyloxy: $-OS(=O)_2R$, wherein R is a sulfonyloxy substituent, for example, a C_{1-7} alkyl group, a C_{3-20} heterocyclyl group, or a C_{5-20} aryl group, preferably a C_{1-7} alkyl group. Examples of sulfonyloxy groups include, but are not limited to, $-OS(=O)_2CH_3$ (mesylate) and $-OS(=O)_2CH_2CH_3$ (esylate).

Sulfate: $-OS(=O)_2OR$; wherein R is a sulfate substituent, for example, a C_{1-7} alkyl group, a C_{3-20} heterocyclyl group, or a C_{5-20} aryl group, preferably a C_{1-7} alkyl group. Examples of sulfate groups include, but are not limited to, $-OS(=O)_2OCH_3$ and $-SO(=O)_2OCH_2CH_3$.

Sulfamyl (sulfamoyl; sulfinic acid amide; sulfinamide): $-S(=O)NR^1R^2$, wherein R^1 and R^2 are independently amino substituents, as defined for amino groups. Examples of sulfamyl groups include, but are not limited to, $-S(=O)NH_2$, $-S(=O)NH(CH_3)$, $-S(=O)N(CH_3)_2$, $-S(=O)NH(CH_2CH_3)$, $-S(=O)N(CH_2CH_3)_2$, and $-S(=O)NHPh$.

Sulfonamido (sulfinamoyl; sulfonic acid amide; sulfonamide): $-S(=O)_2NR^1R^2$, wherein R^1 and R^2 are independently amino substituents, as defined for amino groups. Examples of sulfonamido groups include, but are not limited to, $-S(=O)_2NH_2$, $-S(=O)_2NH(CH_3)$, $-S(=O)_2N(CH_3)_2$, $-S(=O)_2NH(CH_2CH_3)$, $-S(=O)_2N(CH_2CH_3)_2$, and $-S(=O)_2NHPh$.

Sulfamino: $-NR^1S(=O)_2OH$, wherein R^1 is an amino substituent, as defined for amino groups. Examples of sulfamino groups include, but are not limited to, $-NHS(=O)_2OH$ and $-N(CH_3)S(=O)_2OH$.

Sulfonamino: $-NR^1S(=O)_2R$, wherein R^1 is an amino substituent, as defined for amino groups, and R is a sulfonamino substituent, for example, a C_{1-7} alkyl group, a C_{3-20}

heterocyclcyl group, or a C₅₋₂₀ aryl group, preferably a C₁₋₇ alkyl group. Examples of sulfonamino groups include, but are not limited to, -NHS(=O)₂CH₃ and -N(CH₃)S(=O)₂C₆H₅.

Sulfinamino: -NR¹S(=O)R, wherein R¹ is an amino substituent, as defined for amino groups, and R is a sulfinamino substituent, for example, a C₁₋₇ alkyl group, a C₃₋₂₀ heterocyclcyl group, or a C₅₋₂₀ aryl group, preferably a C₁₋₇ alkyl group. Examples of sulfinamino groups include, but are not limited to, -NHS(=O)CH₃ and -N(CH₃)S(=O)C₆H₅.

Phosphino (phosphine): -PR₂, wherein R is a phosphino substituent, for example, -H, a C₁₋₇ alkyl group, a C₃₋₂₀ heterocyclcyl group, or a C₅₋₂₀ aryl group, preferably -H, a C₁₋₇ alkyl group, or a C₅₋₂₀ aryl group. Examples of phosphino groups include, but are not limited to, -PH₂, -P(CH₃)₂, -P(CH₂CH₃)₂, -P(t-Bu)₂, and -P(Ph)₂.

Phospho: -P(=O)₂.

Phosphinyl (phosphine oxide): -P(=O)R₂, wherein R is a phosphinyl substituent, for example, a C₁₋₇ alkyl group, a C₃₋₂₀ heterocyclcyl group, or a C₅₋₂₀ aryl group, preferably a C₁₋₇ alkyl group or a C₅₋₂₀ aryl group. Examples of phosphinyl groups include, but are not limited to, -P(=O)(CH₃)₂, -P(=O)(CH₂CH₃)₂, -P(=O)(t-Bu)₂, and -P(=O)(Ph)₂.

Phosphonic acid (phosphono): -P(=O)(OH)₂.

Phosphonate (phosphono ester): -P(=O)(OR)₂, where R is a phosphonate substituent, for example, -H, a C₁₋₇ alkyl group, a C₃₋₂₀ heterocyclcyl group, or a C₅₋₂₀ aryl group, preferably -H, a C₁₋₇ alkyl group, or a C₅₋₂₀ aryl group. Examples of phosphonate groups include, but are not limited to, -P(=O)(OCH₃)₂, -P(=O)(OCH₂CH₃)₂, -P(=O)(O-t-Bu)₂, and -P(=O)(OPh)₂.

Phosphoric acid (phosphonooxy): -OP(=O)(OH)₂.

Phosphate (phosphonooxy ester): -OP(=O)(OR)₂, where R is a phosphate substituent, for example, -H, a C₁₋₇ alkyl group, a C₃₋₂₀ heterocyclcyl group, or a C₅₋₂₀ aryl group, preferably -H, a C₁₋₇ alkyl group, or a C₅₋₂₀ aryl group. Examples of phosphate groups include, but are not limited to, -OP(=O)(OCH₃)₂, -OP(=O)(OCH₂CH₃)₂, -OP(=O)(O-t-Bu)₂, and -OP(=O)(OPh)₂.

Phosphorous acid: -OP(OH)₂.

Phosphite: $-\text{OP}(\text{OR})_2$, where R is a phosphite substituent, for example, -H, a C_{1-7} alkyl group, a C_{3-20} heterocyclyl group, or a C_{5-20} aryl group, preferably -H, a C_{1-7} alkyl group, or a C_{5-20} aryl group. Examples of phosphite groups include, but are not limited to, $-\text{OP}(\text{OCH}_3)_2$, $-\text{OP}(\text{OCH}_2\text{CH}_3)_2$, $-\text{OP}(\text{O}-t\text{-Bu})_2$, and $-\text{OP}(\text{OPh})_2$.

5

Phosphoramidite: $-\text{OP}(\text{OR}^1)-\text{NR}^2_2$, where R^1 and R^2 are phosphoramidite substituents, for example, -H, a (optionally substituted) C_{1-7} alkyl group, a C_{3-20} heterocyclyl group, or a C_{5-20} aryl group, preferably -H, a C_{1-7} alkyl group, or a C_{5-20} aryl group. Examples of phosphoramidite groups include, but are not limited to, $-\text{OP}(\text{OCH}_2\text{CH}_3)-\text{N}(\text{CH}_3)_2$, $-\text{OP}(\text{OCH}_2\text{CH}_3)-\text{N}(\text{i-Pr})_2$, and $-\text{OP}(\text{OCH}_2\text{CH}_2\text{CN})-\text{N}(\text{i-Pr})_2$.

10

Phosphoramidate: $-\text{OP}(=\text{O})(\text{OR}^1)-\text{NR}^2_2$, where R^1 and R^2 are phosphoramidate substituents, for example, -H, a (optionally substituted) C_{1-7} alkyl group, a C_{3-20} heterocyclyl group, or a C_{5-20} aryl group, preferably -H, a C_{1-7} alkyl group, or a C_{5-20} aryl group. Examples of phosphoramidate groups include, but are not limited to, $-\text{OP}(=\text{O})(\text{OCH}_2\text{CH}_3)-\text{N}(\text{CH}_3)_2$, $-\text{OP}(=\text{O})(\text{OCH}_2\text{CH}_3)-\text{N}(\text{i-Pr})_2$, and $-\text{OP}(=\text{O})(\text{OCH}_2\text{CH}_2\text{CN})-\text{N}(\text{i-Pr})_2$.

15

Alkylene

C_{3-12} alkylene: The term " C_{3-12} alkylene", as used herein, pertains to a bidentate moiety obtained by removing two hydrogen atoms, either both from the same carbon atom, or one from each of two different carbon atoms, of a hydrocarbon compound having from 3 to 12 carbon atoms (unless otherwise specified), which may be aliphatic or alicyclic, and which may be saturated, partially unsaturated, or fully unsaturated. Thus, the term "alkylene" includes the sub-classes alkenylene, alkynylene, cycloalkylene, etc., discussed below.

25

Examples of linear saturated C_{3-12} alkylene groups include, but are not limited to, $-(\text{CH}_2)_n-$ where n is an integer from 3 to 12, for example, $-\text{CH}_2\text{CH}_2\text{CH}_2-$ (propylene), $-\text{CH}_2\text{CH}_2\text{CH}_2\text{CH}_2-$ (butylene), $-\text{CH}_2\text{CH}_2\text{CH}_2\text{CH}_2\text{CH}_2-$ (pentylene) and $-\text{CH}_2\text{CH}_2\text{CH}_2\text{CH}_2\text{CH}_2\text{CH}_2-$ (heptylene).

30

Examples of branched saturated C_{3-12} alkylene groups include, but are not limited to, $-\text{CH}(\text{CH}_3)\text{CH}_2-$, $-\text{CH}(\text{CH}_3)\text{CH}_2\text{CH}_2-$, $-\text{CH}(\text{CH}_3)\text{CH}_2\text{CH}_2\text{CH}_2-$, $-\text{CH}_2\text{CH}(\text{CH}_3)\text{CH}_2-$, $-\text{CH}_2\text{CH}(\text{CH}_3)\text{CH}_2\text{CH}_2-$, $-\text{CH}(\text{CH}_2\text{CH}_3)-$, $-\text{CH}(\text{CH}_2\text{CH}_3)\text{CH}_2-$, and $-\text{CH}_2\text{CH}(\text{CH}_2\text{CH}_3)\text{CH}_2-$.

35

Examples of linear partially unsaturated C_{3-12} alkylene groups (C_{3-12} alkenylene, and alkynylene groups) include, but are not limited to, $-\text{CH}=\text{CH}-\text{CH}_2-$, $-\text{CH}_2-\text{CH}=\text{CH}_2-$,

-CH=CH-CH₂-CH₂-, -CH=CH-CH₂-CH₂-CH₂-, -CH=CH-CH=CH-, -CH=CH-CH=CH-CH₂-, -CH=CH-CH=CH-CH₂-CH₂-, -CH=CH-CH₂-CH=CH-, -CH=CH-CH₂-CH₂-CH=CH-, and -CH₂-C≡C-CH₂-.

- 5 Examples of branched partially unsaturated C₃₋₁₂ alkylene groups (C₃₋₁₂ alkenylene and alkynylene groups) include, but are not limited to, -C(CH₃)=CH-, -C(CH₃)=CH-CH₂-, -CH=CH-CH(CH₃)- and -C≡C-CH(CH₃)-.

- 10 Examples of alicyclic saturated C₃₋₁₂ alkylene groups (C₃₋₁₂ cycloalkylenes) include, but are not limited to, cyclopentylene (e.g. cyclopent-1,3-ylene), and cyclohexylene (e.g. cyclohex-1,4-ylene).

- 15 Examples of alicyclic partially unsaturated C₃₋₁₂ alkylene groups (C₃₋₁₂ cycloalkylenes) include, but are not limited to, cyclopentenylene (e.g. 4-cyclopenten-1,3-ylene), cyclohexenylene (e.g. 2-cyclohexen-1,4-ylene; 3-cyclohexen-1,2-ylene; 2,5-cyclohexadien-1,4-ylene).

Includes Other Forms

- 20 Unless otherwise specified, included in the above are the well known ionic, salt, solvate, and protected forms of these substituents. For example, a reference to carboxylic acid (-COOH) also includes the anionic (carboxylate) form (-COO⁻), a salt or solvate thereof, as well as conventional protected forms. Similarly, a reference to an amino group includes the protonated form (-N⁺HR¹R²), a salt or solvate of the amino group, for example, a hydrochloride salt, as well as conventional protected forms of an amino group. Similarly, a reference to a hydroxyl group also includes the anionic form (-O⁻), a salt or solvate thereof, as well as conventional protected forms.

Salts

- 30 It may be convenient or desirable to prepare, purify, and/or handle a corresponding salt of the active compound, for example, a pharmaceutically-acceptable salt. Examples of pharmaceutically acceptable salts are discussed in Berge, *et al.*, *J. Pharm. Sci.*, **66**, 1-19 (1977).

- 35 For example, if the compound is anionic, or has a functional group which may be anionic (e.g. -COOH may be -COO⁻), then a salt may be formed with a suitable cation. Examples of suitable inorganic cations include, but are not limited to, alkali metal ions such as Na⁺ and

K^+ , alkaline earth cations such as Ca^{2+} and Mg^{2+} , and other cations such as Al^{+3} . Examples of suitable organic cations include, but are not limited to, ammonium ion (i.e. NH_4^+) and substituted ammonium ions (e.g. NH_3R^+ , $NH_2R_2^+$, NHR_3^+ , NR_4^+). Examples of some suitable substituted ammonium ions are those derived from: ethylamine, diethylamine,
5 dicyclohexylamine, triethylamine, butylamine, ethylenediamine, ethanolamine, diethanolamine, piperazine, benzylamine, phenylbenzylamine, choline, meglumine, and tromethamine, as well as amino acids, such as lysine and arginine. An example of a common quaternary ammonium ion is $N(CH_3)_4^+$.

10 If the compound is cationic, or has a functional group which may be cationic (e.g. $-NH_2$ may be $-NH_3^+$), then a salt may be formed with a suitable anion. Examples of suitable inorganic anions include, but are not limited to, those derived from the following inorganic acids: hydrochloric, hydrobromic, hydroiodic, sulfuric, sulfurous, nitric, nitrous, phosphoric, and phosphorous.

15 Examples of suitable organic anions include, but are not limited to, those derived from the following organic acids: 2-acetoxybenzoic, acetic, ascorbic, aspartic, benzoic, camphorsulfonic, cinnamic, citric, edetic, ethanedisulfonic, ethanesulfonic, fumaric, gluceptonic, gluconic, glutamic, glycolic, hydroxymaleic, hydroxynaphthalene carboxylic,
20 isethionic, lactic, lactobionic, lauric, maleic, malic, methanesulfonic, mucic, oleic, oxalic, palmitic, pamoic, pantothenic, phenylacetic, phenylsulfonic, propionic, pyruvic, salicylic, stearic, succinic, sulfanilic, tartaric, toluenesulfonic, trifluoroacetic acid and valeric. Examples of suitable polymeric organic anions include, but are not limited to, those derived from the following polymeric acids: tannic acid, carboxymethyl cellulose.

25 *Solvates*

It may be convenient or desirable to prepare, purify, and/or handle a corresponding solvate of the active compound. The term "solvate" is used herein in the conventional sense to refer to a complex of solute (e.g. active compound, salt of active compound) and solvent. If the
30 solvent is water, the solvate may be conveniently referred to as a hydrate, for example, a mono-hydrate, a di-hydrate, a tri-hydrate, etc.

The invention includes compounds where a solvent adds across the imine bond of the PBD moiety, which is illustrated below where the solvent is water or an alcohol ($R^A OH$, where R^A
35 is C_{1-4} alkyl):

These forms can be called the carbinolamine and carbinolamine ether forms of the PBD (as described in the section relating to R¹⁰ above). The balance of these equilibria depend on the conditions in which the compounds are found, as well as the nature of the moiety itself.

These particular compounds may be isolated in solid form, for example, by lyophilisation.

Isomers

Certain compounds of the invention may exist in one or more particular geometric, optical, enantiomeric, diastereomeric, epimeric, atropic, stereoisomeric, tautomeric, conformational, or anomeric forms, including but not limited to, cis- and trans-forms; E- and Z-forms; c-, t-, and r- forms; endo- and exo-forms; R-, S-, and meso-forms; D- and L-forms; d- and l-forms; (+) and (-) forms; keto-, enol-, and enolate-forms; syn- and anti-forms; synclinal- and anticlinal-forms; α- and β-forms; axial and equatorial forms; boat-, chair-, twist-, envelope-, and halfchair-forms; and combinations thereof, hereinafter collectively referred to as “isomers” (or “isomeric forms”).

The term “chiral” refers to molecules which have the property of non-superimposability of the mirror image partner, while the term “achiral” refers to molecules which are superimposable on their mirror image partner.

The term “stereoisomers” refers to compounds which have identical chemical constitution, but differ with regard to the arrangement of the atoms or groups in space.

“Diastereomer” refers to a stereoisomer with two or more centers of chirality and whose molecules are not mirror images of one another. Diastereomers have different physical properties, e.g. melting points, boiling points, spectral properties, and reactivities. Mixtures of diastereomers may separate under high resolution analytical procedures such as electrophoresis and chromatography.

“Enantiomers” refer to two stereoisomers of a compound which are non-superimposable mirror images of one another.

Stereochemical definitions and conventions used herein generally follow S. P. Parker, Ed., *McGraw-Hill Dictionary of Chemical Terms* (1984) McGraw-Hill Book Company, New York; and Eliel, E. and Wilen, S., "Stereochemistry of Organic Compounds", John Wiley & Sons, Inc., New York, 1994. The compounds of the invention may contain asymmetric or chiral centers, and therefore exist in different stereoisomeric forms. It is intended that all stereoisomeric forms of the compounds of the invention, including but not limited to, diastereomers, enantiomers and atropisomers, as well as mixtures thereof such as racemic mixtures, form part of the present invention. Many organic compounds exist in optically active forms, i.e., they have the ability to rotate the plane of plane-polarized light. In describing an optically active compound, the prefixes D and L, or R and S, are used to denote the absolute configuration of the molecule about its chiral center(s). The prefixes d and l or (+) and (-) are employed to designate the sign of rotation of plane-polarized light by the compound, with (-) or l meaning that the compound is levorotatory. A compound prefixed with (+) or d is dextrorotatory. For a given chemical structure, these stereoisomers are identical except that they are mirror images of one another. A specific stereoisomer may also be referred to as an enantiomer, and a mixture of such isomers is often called an enantiomeric mixture. A 50:50 mixture of enantiomers is referred to as a racemic mixture or a racemate, which may occur where there has been no stereoselection or stereospecificity in a chemical reaction or process. The terms "racemic mixture" and "racemate" refer to an equimolar mixture of two enantiomeric species, devoid of optical activity.

Note that, except as discussed below for tautomeric forms, specifically excluded from the term "isomers", as used herein, are structural (or constitutional) isomers (i.e. isomers which differ in the connections between atoms rather than merely by the position of atoms in space). For example, a reference to a methoxy group, -OCH₃, is not to be construed as a reference to its structural isomer, a hydroxymethyl group, -CH₂OH. Similarly, a reference to ortho-chlorophenyl is not to be construed as a reference to its structural isomer, meta-chlorophenyl. However, a reference to a class of structures may well include structurally isomeric forms falling within that class (e.g. C₁₋₇ alkyl includes n-propyl and iso-propyl; butyl includes n-, iso-, sec-, and tert-butyl; methoxyphenyl includes ortho-, meta-, and para-methoxyphenyl).

The above exclusion does not pertain to tautomeric forms, for example, keto-, enol-, and enolate-forms, as in, for example, the following tautomeric pairs: keto/enol (illustrated

below), imine/enamine, amide/imino alcohol, amidine/amidine, nitroso/oxime, thioketone/enethiol, N-nitroso/hydroxyazo, and nitro/aci-nitro.

The term “tautomer” or “tautomeric form” refers to structural isomers of different energies which are interconvertible via a low energy barrier. For example, proton tautomers (also known as prototropic tautomers) include interconversions via migration of a proton, such as keto-enol and imine-enamine isomerizations. Valence tautomers include interconversions by reorganization of some of the bonding electrons.

Note that specifically included in the term “isomer” are compounds with one or more isotopic substitutions. For example, H may be in any isotopic form, including ^1H , ^2H (D), and ^3H (T); C may be in any isotopic form, including ^{12}C , ^{13}C , and ^{14}C ; O may be in any isotopic form, including ^{16}O and ^{18}O ; and the like.

Examples of isotopes that can be incorporated into compounds of the invention include isotopes of hydrogen, carbon, nitrogen, oxygen, phosphorous, fluorine, and chlorine, such as, but not limited to ^2H (deuterium, D), ^3H (tritium), ^{11}C , ^{13}C , ^{14}C , ^{15}N , ^{18}F , ^{31}P , ^{32}P , ^{35}S , ^{36}Cl , and ^{125}I . Various isotopically labeled compounds of the present invention, for example those into which radioactive isotopes such as ^3H , ^{13}C , and ^{14}C are incorporated. Such isotopically labelled compounds may be useful in metabolic studies, reaction kinetic studies, detection or imaging techniques, such as positron emission tomography (PET) or single-photon emission computed tomography (SPECT) including drug or substrate tissue distribution assays, or in radioactive treatment of patients. Deuterium labelled or substituted therapeutic compounds of the invention may have improved DMPK (drug metabolism and pharmacokinetics) properties, relating to distribution, metabolism, and excretion (ADME). Substitution with heavier isotopes such as deuterium may afford certain therapeutic advantages resulting from greater metabolic stability, for example increased in vivo half-life or reduced dosage requirements. An ^{18}F labeled compound may be useful for PET or SPECT studies. Isotopically labeled compounds of this invention and prodrugs thereof can generally be prepared by carrying out the procedures disclosed in the schemes or in the examples and preparations described below by substituting a readily available isotopically labeled reagent for a non-isotopically labeled reagent. Further, substitution with heavier

isotopes, particularly deuterium (i.e., 2H or D) may afford certain therapeutic advantages resulting from greater metabolic stability, for example increased in vivo half-life or reduced dosage requirements or an improvement in therapeutic index. It is understood that deuterium in this context is regarded as a substituent. The concentration of such a heavier isotope, specifically deuterium, may be defined by an isotopic enrichment factor. In the compounds of this invention any atom not specifically designated as a particular isotope is meant to represent any stable isotope of that atom.

Unless otherwise specified, a reference to a particular compound includes all such isomeric forms, including (wholly or partially) racemic and other mixtures thereof. Methods for the preparation (e.g. asymmetric synthesis) and separation (e.g. fractional crystallisation and chromatographic means) of such isomeric forms are either known in the art or are readily obtained by adapting the methods taught herein, or known methods, in a known manner.

Biological Activity

In vitro cell proliferation assays

Generally, the cytotoxic or cytostatic activity of an antibody-drug conjugate (ADC) is measured by: exposing mammalian cells having receptor proteins, e.g. HER2, to the antibody of the ADC in a cell culture medium; culturing the cells for a period from about 6 hours to about 5 days; and measuring cell viability. Cell-based *in vitro* assays are used to measure viability (proliferation), cytotoxicity, and induction of apoptosis (caspase activation) of an ADC of the invention.

The *in vitro* potency of antibody-drug conjugates can be measured by a cell proliferation assay. The CellTiter-Glo[®] Luminescent Cell Viability Assay is a commercially available (Promega Corp., Madison, WI), homogeneous assay method based on the recombinant expression of *Coleoptera* luciferase (US Patent Nos. 5583024; 5674713 and 5700670). This cell proliferation assay determines the number of viable cells in culture based on quantitation of the ATP present, an indicator of metabolically active cells (Crouch *et al* (1993) *J. Immunol. Meth.* 160:81-88; US 6602677). The CellTiter-Glo[®] Assay is conducted in 96 well format, making it amenable to automated high-throughput screening (HTS) (Cree *et al* (1995) *AntiCancer Drugs* 6:398-404). The homogeneous assay procedure involves adding the single reagent (CellTiter-Glo[®] Reagent) directly to cells cultured in serum-supplemented medium. Cell washing, removal of medium and multiple pipetting steps are not required. The system detects as few as 15 cells/well in a 384-well format in 10 minutes after adding reagent and mixing. The cells may be treated continuously with ADC, or they may be

treated and separated from ADC. Generally, cells treated briefly, i.e. 3 hours, showed the same potency effects as continuously treated cells.

The homogeneous “add-mix-measure” format results in cell lysis and generation of a
5 luminescent signal proportional to the amount of ATP present. The amount of ATP is directly proportional to the number of cells present in culture. The CellTiter-Glo[®] Assay generates a “glow-type” luminescent signal, produced by the luciferase reaction, which has a half-life generally greater than five hours, depending on cell type and medium used. Viable cells are reflected in relative luminescence units (RLU). The substrate, Beetle Luciferin, is oxidatively
10 decarboxylated by recombinant firefly luciferase with concomitant conversion of ATP to AMP and generation of photons.

The *in vitro* potency of antibody-drug conjugates can also be measured by a cytotoxicity assay. Cultured adherent cells are washed with PBS, detached with trypsin, diluted in
15 complete medium, containing 10% FCS, centrifuged, re-suspended in fresh medium and counted with a haemocytometer. Suspension cultures are counted directly. Monodisperse cell suspensions suitable for counting may require agitation of the suspension by repeated aspiration to break up cell clumps.

20 The cell suspension is diluted to the desired seeding density and dispensed (100µl per well) into black 96 well plates. Plates of adherent cell lines are incubated overnight to allow adherence. Suspension cell cultures can be used on the day of seeding.

A stock solution (1ml) of ADC (20µg/ml) is made in the appropriate cell culture medium.
25 Serial 10-fold dilutions of stock ADC are made in 15ml centrifuge tubes by serially transferring 100µl to 900µl of cell culture medium.

Four replicate wells of each ADC dilution (100µl) are dispensed in 96-well black plates, previously plated with cell suspension (100µl), resulting in a final volume of 200 µl. Control
30 wells receive cell culture medium (100µl).

If the doubling time of the cell line is greater than 30 hours, ADC incubation is for 5 days, otherwise a four day incubation is done.

35 At the end of the incubation period, cell viability is assessed with the Alamar blue assay. AlamarBlue (Invitrogen) is dispensed over the whole plate (20µl per well) and incubated for 4

hours. Alamar blue fluorescence is measured at excitation 570nm, emission 585nm on the Varioskan flash plate reader. Percentage cell survival is calculated from the mean fluorescence in the ADC treated wells compared to the mean fluorescence in the control wells.

5

In vivo efficacy

The *in vivo* efficacy of antibody-drug conjugates (ADC) of the invention can be measured by tumor xenograft studies in mice. For example, the *in vivo* efficacy of an anti-HER2 ADC of the invention can be measured by a high expressing HER2 transgenic explant mouse model. An allograft is propagated from the Fo5 mmtv transgenic mouse which does not respond to, or responds poorly to, HERCEPTIN® therapy. Subjects were treated once with ADC at certain dose levels (mg/kg) and PBD drug exposure ($\mu\text{g}/\text{m}^2$); and placebo buffer control (Vehicle) and monitored over two weeks or more to measure the time to tumor doubling, log cell kill, and tumor shrinkage.

15

Use

The conjugates of the invention may be used to provide a PBD conjugate at a target location.

20 The target location is preferably a proliferative cell population. The antibody is an antibody for an antigen present in a proliferative cell population.

In one embodiment the antigen is absent or present at a reduced level in a non-proliferative cell population compared to the amount of antigen present in the proliferative cell population, for example a tumour cell population.

25

The target location may be *in vitro*, *in vivo* or *ex vivo*.

The antibody-drug conjugate (ADC) compounds of the invention include those with utility for anticancer activity. In particular, the compounds include an antibody conjugated, i.e. covalently attached by a linker, to a PBD moiety.

30

At the target location the linker may be cleaved. The antibody-drug conjugate (ADC) compounds of the invention may have a cytotoxic effect with the cleavage of the linker to release a PBD drug moiety. The antibody-drug conjugates (ADC) of the invention selectively

35

deliver cytotoxic agent to tumor tissue whereby greater selectivity, i.e. a lower efficacious dose, may be achieved.

Thus, in one aspect, the present invention provides a conjugate compound as described
5 herein for use in therapy.

In a further aspect there is also provides a conjugate compound as described herein for use in the treatment of a proliferative disease. A second aspect of the present invention provides the use of a conjugate compound in the manufacture of a medicament for treating a
10 proliferative disease.

One of ordinary skill in the art is readily able to determine whether or not a candidate conjugate treats a proliferative condition for any particular cell type. For example, assays which may conveniently be used to assess the activity offered by a particular compound are
15 described in the examples below.

The term "proliferative disease" pertains to an unwanted or uncontrolled cellular proliferation of excessive or abnormal cells which is undesired, such as, neoplastic or hyperplastic growth, whether *in vitro* or *in vivo*.
20

Examples of proliferative conditions include, but are not limited to, benign, pre-malignant, and malignant cellular proliferation, including but not limited to, neoplasms and tumours (e.g. histocytoma, glioma, astrocyoma, osteoma), cancers (e.g. lung cancer, small cell lung cancer, gastrointestinal cancer, bowel cancer, colon cancer, breast carcinoma, ovarian
25 carcinoma, prostate cancer, testicular cancer, liver cancer, kidney cancer, bladder cancer, pancreas cancer, brain cancer, sarcoma, osteosarcoma, Kaposi's sarcoma, melanoma), leukemias, psoriasis, bone diseases, fibroproliferative disorders (e.g. of connective tissues), and atherosclerosis. Cancers of particular interest include, but are not limited to, leukemias and ovarian cancers.

Any type of cell may be treated, including but not limited to, lung, gastrointestinal (including, e.g. bowel, colon), breast (mammary), ovarian, prostate, liver (hepatic), kidney (renal), bladder, pancreas, brain, and skin.
30

In one embodiment, the treatment is of a pancreatic cancer.
35

In one embodiment, the treatment is of a tumour having $\alpha_v\beta_6$ integrin on the surface of the cell.

It is contemplated that the antibody-drug conjugates (ADC) of the present invention may be used to treat various diseases or disorders, e.g. characterized by the overexpression of a tumor antigen. Exemplary conditions or hyperproliferative disorders include benign or malignant tumors; leukemia, haematological, and lymphoid malignancies. Others include neuronal, glial, astrocytal, hypothalamic, glandular, macrophagal, epithelial, stromal, blastocoelic, inflammatory, angiogenic and immunologic, including autoimmune, disorders.

Generally, the disease or disorder to be treated is a hyperproliferative disease such as cancer. Examples of cancer to be treated herein include, but are not limited to, carcinoma, lymphoma, blastoma, sarcoma, and leukemia or lymphoid malignancies. More particular examples of such cancers include squamous cell cancer (e.g. epithelial squamous cell cancer), lung cancer including small-cell lung cancer, non-small cell lung cancer, adenocarcinoma of the lung and squamous carcinoma of the lung, cancer of the peritoneum, hepatocellular cancer, gastric or stomach cancer including gastrointestinal cancer, pancreatic cancer, glioblastoma, cervical cancer, ovarian cancer, liver cancer, bladder cancer, hepatoma, breast cancer, colon cancer, rectal cancer, colorectal cancer, endometrial or uterine carcinoma, salivary gland carcinoma, kidney or renal cancer, prostate cancer, vulval cancer, thyroid cancer, hepatic carcinoma, anal carcinoma, penile carcinoma, as well as head and neck cancer.

Autoimmune diseases for which the ADC compounds may be used in treatment include rheumatologic disorders (such as, for example, rheumatoid arthritis, Sjögren's syndrome, scleroderma, lupus such as SLE and lupus nephritis, polymyositis/dermatomyositis, cryoglobulinemia, anti-phospholipid antibody syndrome, and psoriatic arthritis), osteoarthritis, autoimmune gastrointestinal and liver disorders (such as, for example, inflammatory bowel diseases (e.g. ulcerative colitis and Crohn's disease), autoimmune gastritis and pernicious anemia, autoimmune hepatitis, primary biliary cirrhosis, primary sclerosing cholangitis, and celiac disease), vasculitis (such as, for example, ANCA-associated vasculitis, including Churg-Strauss vasculitis, Wegener's granulomatosis, and polyarteritis), autoimmune neurological disorders (such as, for example, multiple sclerosis, opsoclonus myoclonus syndrome, myasthenia gravis, neuromyelitis optica, Parkinson's disease, Alzheimer's disease, and autoimmune polyneuropathies), renal disorders (such as, for example, glomerulonephritis, Goodpasture's syndrome, and Berger's disease), autoimmune

dermatologic disorders (such as, for example, psoriasis, urticaria, hives, pemphigus vulgaris, bullous pemphigoid, and cutaneous lupus erythematosus), hematologic disorders (such as, for example, thrombocytopenic purpura, thrombotic thrombocytopenic purpura, post-transfusion purpura, and autoimmune hemolytic anemia), atherosclerosis, uveitis,

5 autoimmune hearing diseases (such as, for example, inner ear disease and hearing loss), Behcet's disease, Raynaud's syndrome, organ transplant, and autoimmune endocrine disorders (such as, for example, diabetic-related autoimmune diseases such as insulin-dependent diabetes mellitus (IDDM), Addison's disease, and autoimmune thyroid disease (e.g. Graves' disease and thyroiditis)). More preferred such diseases include, for example,

10 rheumatoid arthritis, ulcerative colitis, ANCA-associated vasculitis, lupus, multiple sclerosis, Sjögren's syndrome, Graves' disease, IDDM, pernicious anemia, thyroiditis, and glomerulonephritis.

Methods of Treatment

15 The conjugates of the present invention may be used in a method of therapy. Also provided is a method of treatment, comprising administering to a subject in need of treatment a therapeutically-effective amount of a conjugate compound of the invention. The term "therapeutically effective amount" is an amount sufficient to show benefit to a patient. Such benefit may be at least amelioration of at least one symptom. The actual amount

20 administered, and rate and time-course of administration, will depend on the nature and severity of what is being treated. Prescription of treatment, e.g. decisions on dosage, is within the responsibility of general practitioners and other medical doctors.

A compound of the invention may be administered alone or in combination with other

25 treatments, either simultaneously or sequentially dependent upon the condition to be treated. Examples of treatments and therapies include, but are not limited to, chemotherapy (the administration of active agents, including, e.g. drugs, such as chemotherapeutics); surgery; and radiation therapy.

30 A "chemotherapeutic agent" is a chemical compound useful in the treatment of cancer, regardless of mechanism of action. Classes of chemotherapeutic agents include, but are not limited to: alkylating agents, antimetabolites, spindle poison plant alkaloids, cytotoxic/antitumor antibiotics, topoisomerase inhibitors, antibodies, photosensitizers, and kinase inhibitors. Chemotherapeutic agents include compounds used in "targeted therapy"

35 and conventional chemotherapy.

Examples of chemotherapeutic agents include: erlotinib (TARCEVA®, Genentech/OSI Pharm.), docetaxel (TAXOTERE®, Sanofi-Aventis), 5-FU (fluorouracil, 5-fluorouracil, CAS No. 51-21-8), gemcitabine (GEMZAR®, Lilly), PD-0325901 (CAS No. 391210-10-9, Pfizer), cisplatin (cis-diamine, dichloroplatinum(II), CAS No. 15663-27-1), carboplatin (CAS No. 41575-94-4), paclitaxel (TAXOL®, Bristol-Myers Squibb Oncology, Princeton, N.J.),
 5 trastuzumab (HERCEPTIN®, Genentech), temozolomide (4-methyl-5-oxo- 2,3,4,6,8-pentazabicyclo [4.3.0] nona-2,7,9-triene- 9-carboxamide, CAS No. 85622-93-1, TEMODAR®, TEMODAL®, Schering Plough), tamoxifen ((Z)-2-[4-(1,2-diphenylbut-1-enyl)phenoxy]-N,N-dimethylethanamine, NOLVADEX®, ISTUBAL®, VALODEX®), and
 10 doxorubicin (ADRIAMYCIN®), Akti-1/2, HPPD, and rapamycin.

More examples of chemotherapeutic agents include: oxaliplatin (ELOXATIN®, Sanofi), bortezomib (VELCADE®, Millennium Pharm.), sunitinib (SUNITINIB®, SU11248, Pfizer), letrozole (FEMARA®, Novartis), imatinib mesylate (GLEEVEC®, Novartis), XL-518 (Mek inhibitor, Exelixis, WO 2007/044515), ARRY-886 (Mek inhibitor, AZD6244, Array BioPharma,
 15 AstraZeneca), SF-1126 (PI3K inhibitor, Semafore Pharmaceuticals), BEZ-235 (PI3K inhibitor, Novartis), XL-147 (PI3K inhibitor, Exelixis), PTK787/ZK 222584 (Novartis), fulvestrant (FASLODEX®, AstraZeneca), leucovorin (folinic acid), rapamycin (sirolimus, RAPAMUNE®, Wyeth), lapatinib (TYKERB®, GSK572016, Glaxo Smith Kline), lonafarnib (SARASAR™, SCH 66336, Schering Plough), sorafenib (NEXAVAR®, BAY43-9006, Bayer
 20 Labs), gefitinib (IRESSA®, AstraZeneca), irinotecan (CAMPTOSAR®, CPT-11, Pfizer), tipifarnib (ZARNESTRA™, Johnson & Johnson), ABRAXANE™ (Cremophor-free), albumin-engineered nanoparticle formulations of paclitaxel (American Pharmaceutical Partners, Schaumburg, IL), vandetanib (rINN, ZD6474, ZACTIMA®, AstraZeneca), chlorambucil, AG1478, AG1571 (SU 5271; Sugen), temsirolimus (TORISEL®, Wyeth), pazopanib
 25 (GlaxoSmithKline), canfosfamide (TELCYTA®, Telik), thiotepa and cyclophosphamide (CYTOXAN®, NEOSAR®); alkyl sulfonates such as busulfan, improsulfan and piposulfan; aziridines such as benzodopa, carboquone, meturedopa, and uredopa; ethylenimines and methylamelamines including altretamine, triethylenemelamine, triethylenephosphoramide, triethylenethiophosphoramide and trimethylomelamine; acetogenins (especially bullatacin and bullatacinone); a camptothecin (including the synthetic analog topotecan); bryostatin;
 30 callistatin; CC-1065 (including its adozelesin, carzelesin and bizelesin synthetic analogs); cryptophycins (particularly cryptophycin 1 and cryptophycin 8); dolastatin; duocarmycin (including the synthetic analogs, KW-2189 and CB1-TM1); eleutherobin; pancratistatin; a sarcodictyin; spongistatin; nitrogen mustards such as chlorambucil, chlornaphazine, chlorophosphamide, estramustine, ifosfamide, mechlorethamine, mechlorethamine oxide
 35 hydrochloride, melphalan, novembichin, phenesterine, prednimustine, trofosfamide, uracil

mustard; nitrosoureas such as carmustine, chlorozotocin, fotemustine, lomustine, nimustine, and ranimustine; antibiotics such as the enediyne antibiotics (e.g. calicheamicin, calicheamicin gamma1I, calicheamicin omegal1 (*Angew Chem. Intl. Ed. Engl.* (1994) 33:183-186); dynemicin, dynemicin A; bisphosphonates, such as clodronate; an

5 esperamicin; as well as neocarzinostatin chromophore and related chromoprotein enediyne antibiotic chromophores), aclacinomysins, actinomycin, authramycin, azaserine, bleomycins, cactinomycin, carabycin, carminomycin, carzinophilin, chromomycinis, dactinomycin, daunorubicin, detorubicin, 6-diazo-5-oxo-L-norleucine, morpholino-doxorubicin, cyanomorpholino-doxorubicin, 2-pyrrolino-doxorubicin and deoxydoxorubicin), epirubicin,

10 esorubicin, idarubicin, nemorubicin, marcellomycin, mitomycins such as mitomycin C, mycophenolic acid, nogalamycin, olivomycins, peplomycin, porfiromycin, puromycin, quelamycin, rodorubicin, streptonigrin, streptozocin, tubercidin, ubenimex, zinostatin, zorubicin; anti-metabolites such as methotrexate and 5-fluorouracil (5-FU); folic acid analogs such as denopterin, methotrexate, pteropterin, trimetrexate; purine analogs such as

15 fludarabine, 6-mercaptopurine, thiamiprine, thioguanine; pyrimidine analogs such as ancitabine, azacitidine, 6-azauridine, carmofur, cytarabine, dideoxyuridine, doxifluridine, enocitabine, floxuridine; androgens such as calusterone, dromostanolone propionate, epitio stanol, mepitio stanane, testolactone; anti-adrenals such as aminogluthethimide, mitotane, trilostane; folic acid replenisher such as frolinic acid; aceglatone; aldophosphamide

20 glycoside; aminolevulinic acid; eniluracil; amsacrine; bestrabucil; bisantrene; edatraxate; defofamine; demecolcine; diaziquone; elfornithine; elliptinium acetate; an epothilone; etoglucid; gallium nitrate; hydroxyurea; lentinan; lonidainine; maytansinoids such as maytansine and ansamitocins; mitoguazone; mitoxantrone; mopidanmol; nitraerine; pentostatin; phenamet; pirarubicin; losoxantrone; podophyllinic acid; 2-ethylhydrazide;

25 procarbazine; PSK® polysaccharide complex (JHS Natural Products, Eugene, OR); razoxane; rhizoxin; sizofiran; spirogermanium; tenuazonic acid; triaziquone; 2,2',2''-trichlorotriethylamine; trichothecenes (especially T-2 toxin, verracurin A, roridin A and anguidine); urethan; vindesine; dacarbazine; mannomustine; mitobronitol; mitolactol; pipobroman; gacytosine; arabinoside ("Ara-C"); cyclophosphamide; thiotepa; 6-thioguanine;

30 mercaptopurine; methotrexate; platinum analogs such as cisplatin and carboplatin; vinblastine; etoposide (VP-16); ifosfamide; mitoxantrone; vincristine; vinorelbine (NAVELBINE®); novantrone; teniposide; edatrexate; daunomycin; aminopterin; capecitabine (XELODA®, Roche); ibandronate; CPT-11; topoisomerase inhibitor RFS 2000; difluoromethylornithine (DMFO); retinoids such as retinoic acid; and pharmaceutically

35 acceptable salts, acids and derivatives of any of the above.

Also included in the definition of “chemotherapeutic agent” are: (i) anti-hormonal agents that act to regulate or inhibit hormone action on tumors such as anti-estrogens and selective estrogen receptor modulators (SERMs), including, for example, tamoxifen (including NOLVADEX®; tamoxifen citrate), raloxifene, droloxifene, 4-hydroxytamoxifen, trioxifene, keoxifene, LY117018, onapristone, and FARESTON® (toremifine citrate); (ii) aromatase inhibitors that inhibit the enzyme aromatase, which regulates estrogen production in the adrenal glands, such as, for example, 4(5)-imidazoles, aminoglutethimide, MEGASE® (megestrol acetate), AROMASIN® (exemestane; Pfizer), formestanie, fadrozole, RIVISOR® (vorozone), FEMARA® (letrozole; Novartis), and ARIMIDEX® (anastrozole; AstraZeneca); (iii) anti-androgens such as flutamide, nilutamide, bicalutamide, leuprolide, and goserelin; as well as troxacitabine (a 1,3-dioxolane nucleoside cytosine analog); (iv) protein kinase inhibitors such as MEK inhibitors (WO 2007/044515); (v) lipid kinase inhibitors; (vi) antisense oligonucleotides, particularly those which inhibit expression of genes in signaling pathways implicated in aberrant cell proliferation, for example, PKC- α , Raf and H-Ras, such as oblimersen (GENASENSE®, Genta Inc.); (vii) ribozymes such as VEGF expression inhibitors (e.g., ANGIOZYME®) and HER2 expression inhibitors; (viii) vaccines such as gene therapy vaccines, for example, ALLOVECTIN®, LEUVECTIN®, and VAXID®; PROLEUKIN® rIL-2; topoisomerase 1 inhibitors such as LURTOTECAN®; ABARELIX® rmRH; (ix) anti-angiogenic agents such as bevacizumab (AVASTIN®, Genentech); and pharmaceutically acceptable salts, acids and derivatives of any of the above.

Also included in the definition of “chemotherapeutic agent” are therapeutic antibodies such as alemtuzumab (Campath), bevacizumab (AVASTIN®, Genentech); cetuximab (ERBITUX®, Imclone); panitumumab (VECTIBIX®, Amgen), rituximab (RITUXAN®, Genentech/Biogen Idec), pertuzumab (OMNITARG™, 2C4, Genentech), trastuzumab (HERCEPTIN®, Genentech), tositumomab (Bexxar, Corixa), and the antibody drug conjugate, gemtuzumab ozogamicin (MYLOTARG®, Wyeth).

Humanized monoclonal antibodies with therapeutic potential as chemotherapeutic agents in combination with the conjugates of the invention include: alemtuzumab, apolizumab, aselizumab, atlizumab, bapineuzumab, bevacizumab, bivatuzumab mertansine, cantuzumab mertansine, cedelizumab, certolizumab pegol, cidfusituzumab, cidtuzumab, daclizumab, eculizumab, efalizumab, epratuzumab, erlizumab, felvizumab, fontolizumab, gemtuzumab ozogamicin, inotuzumab ozogamicin, ipilimumab, labetuzumab, lintuzumab, matuzumab, mepolizumab, motavizumab, motovizumab, natalizumab, nimotuzumab, nolovizumab, numavizumab, ocrelizumab, omalizumab, palivizumab, pascolizumab, pecfusituzumab, pectuzumab, pertuzumab, pexelizumab, ralivizumab, ranibizumab, reslivizumab, reslizumab,

resyvizumab, rovelizumab, ruplizumab, sibrotuzumab, siplizumab, sontuzumab, tacatuzumab tetraxetan, tadocizumab, talizumab, tefibazumab, tocilizumab, toralizumab, trastuzumab, tucotuzumab celmoleukin, tucosituzumab, umavizumab, urtoxazumab, and visilizumab.

5

Pharmaceutical compositions according to the present invention, and for use in accordance with the present invention, may comprise, in addition to the active ingredient, i.e. a conjugate compound, a pharmaceutically acceptable excipient, carrier, buffer, stabiliser or other materials well known to those skilled in the art. Such materials should be non-toxic and should not interfere with the efficacy of the active ingredient. The precise nature of the carrier or other material will depend on the route of administration, which may be oral, or by injection, e.g. cutaneous, subcutaneous, or intravenous.

10

Pharmaceutical compositions for oral administration may be in tablet, capsule, powder or liquid form. A tablet may comprise a solid carrier or an adjuvant. Liquid pharmaceutical compositions generally comprise a liquid carrier such as water, petroleum, animal or vegetable oils, mineral oil or synthetic oil. Physiological saline solution, dextrose or other saccharide solution or glycols such as ethylene glycol, propylene glycol or polyethylene glycol may be included. A capsule may comprise a solid carrier such a gelatin.

15

20

For intravenous, cutaneous or subcutaneous injection, or injection at the site of affliction, the active ingredient will be in the form of a parenterally acceptable aqueous solution which is pyrogen-free and has suitable pH, isotonicity and stability. Those of relevant skill in the art are well able to prepare suitable solutions using, for example, isotonic vehicles such as Sodium Chloride Injection, Ringer's Injection, Lactated Ringer's Injection. Preservatives, stabilisers, buffers, antioxidants and/or other additives may be included, as required.

25

Formulations

While it is possible for the conjugate compound to be used (e.g., administered) alone, it is often preferable to present it as a composition or formulation.

30

In one embodiment, the composition is a pharmaceutical composition (e.g., formulation, preparation, medicament) comprising a conjugate compound, as described herein, and a pharmaceutically acceptable carrier, diluent, or excipient.

35

In one embodiment, the composition is a pharmaceutical composition comprising at least one conjugate compound, as described herein, together with one or more other pharmaceutically acceptable ingredients well known to those skilled in the art, including, but not limited to, pharmaceutically acceptable carriers, diluents, excipients, adjuvants, fillers, buffers, preservatives, anti-oxidants, lubricants, stabilisers, solubilisers, surfactants (e.g., wetting agents), masking agents, colouring agents, flavouring agents, and sweetening agents.

In one embodiment, the composition further comprises other active agents, for example, other therapeutic or prophylactic agents.

Suitable carriers, diluents, excipients, etc. can be found in standard pharmaceutical texts. See, for example, Handbook of Pharmaceutical Additives, 2nd Edition (eds. M. Ash and I. Ash), 2001 (Synapse Information Resources, Inc., Endicott, New York, USA), Remington's Pharmaceutical Sciences, 20th edition, pub. Lippincott, Williams & Wilkins, 2000; and Handbook of Pharmaceutical Excipients, 2nd edition, 1994.

Another aspect of the present invention pertains to methods of making a pharmaceutical composition comprising admixing at least one [^{11}C]-radiolabelled conjugate or conjugate-like compound, as defined herein, together with one or more other pharmaceutically acceptable ingredients well known to those skilled in the art, e.g., carriers, diluents, excipients, etc. If formulated as discrete units (e.g., tablets, etc.), each unit contains a predetermined amount (dosage) of the active compound.

The term "pharmaceutically acceptable," as used herein, pertains to compounds, ingredients, materials, compositions, dosage forms, etc., which are, within the scope of sound medical judgment, suitable for use in contact with the tissues of the subject in question (e.g., human) without excessive toxicity, irritation, allergic response, or other problem or complication, commensurate with a reasonable benefit/risk ratio. Each carrier, diluent, excipient, etc. must also be "acceptable" in the sense of being compatible with the other ingredients of the formulation.

The formulations may be prepared by any methods well known in the art of pharmacy. Such methods include the step of bringing into association the active compound with a carrier which constitutes one or more accessory ingredients. In general, the formulations are prepared by uniformly and intimately bringing into association the active compound with

carriers (e.g., liquid carriers, finely divided solid carrier, etc.), and then shaping the product, if necessary.

5 The formulation may be prepared to provide for rapid or slow release; immediate, delayed, timed, or sustained release; or a combination thereof.

Formulations suitable for parenteral administration (e.g., by injection), include aqueous or non-aqueous, isotonic, pyrogen-free, sterile liquids (e.g., solutions, suspensions), in which the active ingredient is dissolved, suspended, or otherwise provided (e.g., in a liposome or other microparticulate). Such liquids may additionally contain other pharmaceutically acceptable ingredients, such as anti-oxidants, buffers, preservatives, stabilisers, bacteriostats, suspending agents, thickening agents, and solutes which render the formulation isotonic with the blood (or other relevant bodily fluid) of the intended recipient. Examples of excipients include, for example, water, alcohols, polyols, glycerol, vegetable oils, and the like. Examples of suitable isotonic carriers for use in such formulations include Sodium Chloride Injection, Ringer's Solution, or Lactated Ringer's Injection. Typically, the concentration of the active ingredient in the liquid is from about 1 ng/ml to about 10 µg/ml, for example from about 10 ng/ml to about 1 µg/ml. The formulations may be presented in unit-dose or multi-dose sealed containers, for example, ampoules and vials, and may be stored in a freeze-dried (lyophilised) condition requiring only the addition of the sterile liquid carrier, for example water for injections, immediately prior to use. Extemporaneous injection solutions and suspensions may be prepared from sterile powders, granules, and tablets.

Dosage

25 It will be appreciated by one of skill in the art that appropriate dosages of the conjugate compound, and compositions comprising the conjugate compound, can vary from patient to patient. Determining the optimal dosage will generally involve the balancing of the level of therapeutic benefit against any risk or deleterious side effects. The selected dosage level will depend on a variety of factors including, but not limited to, the activity of the particular compound, the route of administration, the time of administration, the rate of excretion of the compound, the duration of the treatment, other drugs, compounds, and/or materials used in combination, the severity of the condition, and the species, sex, age, weight, condition, general health, and prior medical history of the patient. The amount of compound and route of administration will ultimately be at the discretion of the physician, veterinarian, or clinician, although generally the dosage will be selected to achieve local concentrations at the site of

action which achieve the desired effect without causing substantial harmful or deleterious side-effects.

Administration can be effected in one dose, continuously or intermittently (e.g., in divided
5 doses at appropriate intervals) throughout the course of treatment. Methods of determining
the most effective means and dosage of administration are well known to those of skill in the
art and will vary with the formulation used for therapy, the purpose of the therapy, the target
cell(s) being treated, and the subject being treated. Single or multiple administrations can be
carried out with the dose level and pattern being selected by the treating physician,
10 veterinarian, or clinician.

In general, a suitable dose of the active compound is in the range of about 100 ng to about
25 mg (more typically about 1 μ g to about 10 mg) per kilogram body weight of the subject
per day. Where the active compound is a salt, an ester, an amide, a prodrug, or the like, the
15 amount administered is calculated on the basis of the parent compound and so the actual
weight to be used is increased proportionately.

In one embodiment, the active compound is administered to a human patient according to
the following dosage regime: about 100 mg, 3 times daily.

In one embodiment, the active compound is administered to a human patient according to
the following dosage regime: about 150 mg, 2 times daily.

In one embodiment, the active compound is administered to a human patient according to
25 the following dosage regime: about 200 mg, 2 times daily.

However in one embodiment, the conjugate compound is administered to a human patient
according to the following dosage regime: about 50 or about 75 mg, 3 or 4 times daily.

In one embodiment, the conjugate compound is administered to a human patient according
30 to the following dosage regime: about 100 or about 125 mg, 2 times daily.

The dosage amounts described above may apply to the conjugate (including the PBD
moiety and the linker to the antibody) or to the effective amount of PBD compound provided,
35 for example the amount of compound that is releasable after cleavage of the linker.

For the prevention or treatment of disease, the appropriate dosage of an ADC of the invention will depend on the type of disease to be treated, as defined above, the severity and course of the disease, whether the molecule is administered for preventive or therapeutic purposes, previous therapy, the patient's clinical history and response to the antibody, and the discretion of the attending physician. The molecule is suitably administered to the patient at one time or over a series of treatments. Depending on the type and severity of the disease, about 1 µg/kg to 15 mg/kg (e.g. 0.1-20 mg/kg) of molecule is an initial candidate dosage for administration to the patient, whether, for example, by one or more separate administrations, or by continuous infusion. A typical daily dosage might range from about 1 µg/kg to 100 mg/kg or more, depending on the factors mentioned above. An exemplary dosage of ADC to be administered to a patient is in the range of about 0.1 to about 10 mg/kg of patient weight. For repeated administrations over several days or longer, depending on the condition, the treatment is sustained until a desired suppression of disease symptoms occurs. An exemplary dosing regimen comprises a course of administering an initial loading dose of about 4 mg/kg, followed by additional doses every week, two weeks, or three weeks of an ADC. Other dosage regimens may be useful. The progress of this therapy is easily monitored by conventional techniques and assays.

Treatment

The term "treatment," as used herein in the context of treating a condition, pertains generally to treatment and therapy, whether of a human or an animal (e.g., in veterinary applications), in which some desired therapeutic effect is achieved, for example, the inhibition of the progress of the condition, and includes a reduction in the rate of progress, a halt in the rate of progress, regression of the condition, amelioration of the condition, and cure of the condition. Treatment as a prophylactic measure (i.e., prophylaxis, prevention) is also included.

The term "therapeutically-effective amount," as used herein, pertains to that amount of an active compound, or a material, composition or dosage from comprising an active compound, which is effective for producing some desired therapeutic effect, commensurate with a reasonable benefit/risk ratio, when administered in accordance with a desired treatment regimen.

Similarly, the term "prophylactically-effective amount," as used herein, pertains to that amount of an active compound, or a material, composition or dosage from comprising an active compound, which is effective for producing some desired prophylactic effect,

commensurate with a reasonable benefit/risk ratio, when administered in accordance with a desired treatment regimen.

Preparation of Antibody drug conjugates

- 5 Antibody drug conjugates may be prepared by several routes, employing organic chemistry reactions, conditions, and reagents known to those skilled in the art, including: (1) reaction of a nucleophilic group of an antibody with a bivalent linker reagent, to form antibody-linker intermediate Ab-L, via a covalent bond, followed by reaction with an activated drug moiety reagent ; and (2) reaction of a drug moiety reagent with a linker reagent, to form drug-linker
10 reagent D-L, via a covalent bond, followed by reaction with the nucleophilic of an antibody. Conjugation methods (1) and (2) may be employed with a variety of antibodies, and linkers to prepare the antibody-drug conjugates of the invention.

- Nucleophilic groups on antibodies include, but are not limited to side chain thiol groups, e.g.
15 cysteine. Thiol groups are nucleophilic and capable of reacting to form covalent bonds with electrophilic groups on linker moieties such as those of the present invention. Certain antibodies have reducible interchain disulfides, i.e. cysteine bridges. Antibodies may be made reactive for conjugation with linker reagents by treatment with a reducing agent such as DTT (Cleland's reagent, dithiothreitol) or TCEP (tris(2-carboxyethyl)phosphine
20 hydrochloride; Getz et al (1999) Anal. Biochem. Vol 273:73-80; Soltec Ventures, Beverly, MA). Each cysteine disulfide bridge will thus form, theoretically, two reactive thiol nucleophiles. Additional nucleophilic groups can be introduced into antibodies through the reaction of lysines with 2-iminothiolane (Traut's reagent) resulting in conversion of an amine into a thiol.

25

The Subject/Patient

- The subject/patient may be an animal, mammal, a placental mammal, a marsupial (e.g., kangaroo, wombat), a monotreme (e.g., duckbilled platypus), a rodent (e.g., a guinea pig, a hamster, a rat, a mouse), murine (e.g., a mouse), a lagomorph (e.g., a rabbit), avian
30 (e.g., a bird), canine (e.g., a dog), feline (e.g., a cat), equine (e.g., a horse), porcine (e.g., a pig), ovine (e.g., a sheep), bovine (e.g., a cow), a primate, simian (e.g., a monkey or ape), a monkey (e.g., marmoset, baboon), an ape (e.g., gorilla, chimpanzee, orangutang, gibbon), or a human.

- 35 Furthermore, the subject/patient may be any of its forms of development, for example, a fetus. In one preferred embodiment, the subject/patient is a human.

In one embodiment, the patient is a population where each patient has a tumour having $\alpha_v\beta_6$ integrin on the surface of the cell.

5 **Synthesis**

Conjugates of formula A may be synthesised from corresponding drug-linker compounds of formula B by reacting them with cell binding agents under appropriate conditions. Thus, conjugates where Y is of formula A1 may be synthesised from drug-linker compounds where Y^L is of formula B1. Conjugates where Y is of formula A2 may be synthesised from drug-linker compounds where Y^L is of formula B2.

The conditions, as described above, will depend on the type of bond being formed between the drug-linker compound and the cell binding agent, which itself will reflect the nature of the binding site on the cell binding agent.

Drug-linker compounds of formula B may be synthesised from corresponding compounds of formula C.

Drug-linker compounds where Y^L is of formula B1 may be synthesised from compounds where Y^C is of formula C1, by reaction with a compound of formula E1:

E1

in an appropriate solvent, where Q' is

, in the presence of an amide coupling reagent.

Drug-linker compounds where Y^L is of formula B2 may be synthesised from compounds where Y^C is of formula C2, by reaction with a compound of formula E1 in an appropriate solvent, in the presence of an amide coupling reagent.

Alternatively, the group formed by E1 may be added in two steps, adding compound F1 (or a protected version thereof) in an appropriate solvent, in the presence of an amide coupling

reagent, followed by F2 in an appropriate solvent, in the presence of an amide coupling reagent. If a protected version of F1 is used, it will be deprotected before F2 is added.

Compound of formula C can be made from the corresponding compound of formula G:

5

Compounds of formula C where Y^C is of formula C1 may be synthesised by reacting a compound of formula G with a compound of formula H1:

10

where Prot^N is an amine protecting group, such as Alloc, in the presence of tetrabutylammonium iodide and potassium carbonate, followed by deprotection of the amine under standard conditions. The protecting group used should be orthogonal to any other protecting groups in the compound.

15

Compounds of formula C where Y^C is of formula C2 may be synthesised by reacting a compound of formula G with a compound of formula H2:

20

where Prot^N is an amine protecting group, such as Alloc, in the presence of tetrabutylammonium iodide and potassium carbonate, followed by deprotection of the amine under standard conditions. The protecting group used should be orthogonal to any other protecting groups in the compound.

Alternatively, compounds of formula C where Y^C is of formula C2 may be synthesised by reacting a compound of formula G with a compound of formula H3:

- 5 in the presence of tetrabutylammonium iodide and potassium carbonate, followed by reduction of the nitro group under standard conditions.

Compound of formula G containing a single PBD moiety can be synthesised according to the disclosure of WO 2005/085259, and in particular the discussion from pages 31 to 39, which
 10 is incorporated herein by reference. Reference is also made to the teaching of co-pending application PCT/EP2012/070232, filed on 12 October 2012.

The synthesis of PBD compounds containing two imine moieties is extensively discussed in the following references, which discussions are incorporated herein by reference:

- 15 a) WO 00/12508 (pages 14 to 30);
 b) WO 2005/023814 (pages 3 to 10);
 c) WO 2004/043963 (pages 28 to 29);
 d) WO 2005/085251 (pages 30 to 39); and
 e) WO 2011/130598 (pages 126 to 150).

20

The disclosure of WO 2005/085259 discussed above is also relevant to the synthesis of compounds of formula G which comprise two PBD moieties. The synthesis methods disclosed therein may be modified to include an orthogonally protected hydroxyl group at C7 (i.e. group R^A in Scheme 4).

25

Alternatively, compounds of formula G may be synthesised as described in the above references, but starting from a dimer core of formula J:

where Prot^O is a hydroxyl protecting group. Such compounds of formula J may be made by methods analogous to those in the examples of the present application.

In other methods, compounds of K1 or K2:

(K1)

(K2)

- 5 may be reacted with G, followed by conversion to drug linkers of formula B, by deprotection and addition of a compound of formula F2.

Amine protecting groups

- 10 Amine protecting groups are well-known to those skilled in the art. Particular reference is made to the disclosure of suitable protecting groups in Greene's Protecting Groups in Organic Synthesis, Fourth Edition, John Wiley & Sons, 2007 (ISBN 978-0-471-69754-1), pages 696-871.

Hydroxyl protecting groups

- 15 Hydroxyl protecting groups are well-known to those skilled in the art. Particular reference is made to the disclosure of suitable protecting groups in Greene's Protecting Groups in Organic Synthesis, Fourth Edition, John Wiley & Sons, 2007 (ISBN 978-0-471-69754-1), pages 16-298.

20 **EXAMPLES**

General Conditions

- Reaction progress was monitored by thin-layer chromatography (TLC) using Merck Kieselgel 60 F254 silica gel, with fluorescent indicator on aluminium plates. Visualisation of TLC was achieved with UV light or iodine vapour unless otherwise stated. Flash chromatography was performed using Merck Kieselgel 60 F254 silica gel. Extraction and chromatography solvents were bought and used without further purification from Fisher Scientific, U.K. All chemicals were purchased from Aldrich, Lancaster or BDH.

- 30 ¹H and ¹³C NMR spectra were obtained on a Bruker Avance 400 spectrometer. Coupling constants are quoted in hertz (Hz). Chemical shifts are recorded in parts per million (ppm)

downfield from tetramethylsilane. Spin multiplicities are described as s (singlet), bs (broad singlet), d (doublet), t (triplet), q (quartet), p (pentuplet) and m (multiplet).

LCMS Method

- 5 The HPLC (Shimazu LCMS-2020) was run using a mobile phase of water (A) (formic acid 0.1%) and acetonitrile (B) (formic acid 0.1%). Gradient: initial composition 5% B held over 0.25 min, then increase from 5% B to 100% B over a 2 min period. The composition was held for 0.50 min at 100% B, then returned to 5% B in 0.05 minutes and hold there for 0.05 min. Total gradient run time equals 3 minutes.
- 10 Flow rate 0.8 mL/min. Wavelength detection range: 220 to 400 nm. Column: Waters Acquity UPLC BEH Shield RP18 1.7 μ m 2.1x50mm.

Synthesis of Key Intermediates

(a) 5-(benzyloxy)-4-((5-(4-carboxy-2-methoxy-5-nitrophenoxy)pentyl)oxy)-2-nitrobenzoic acid

15 (17)

(i) 3-(benzyloxy)-4-hydroxybenzaldehyde (12)

- 20 Sodium hydride (51.2 g, 1.27 mol, 2.2 eq) was rinsed twice with hexane in a three-neck flask and anhydrous DMSO (800 mL) was added. The flask was placed in a water bath at room temperature. A solution of 3,4-dihydroxybenzaldehyde 11 (80 g, 579.2 mmol) in dry DMSO (160 mL) was added dropwise, with an addition funnel, over 40 minutes and the reaction mixture was stirred 30 minutes under Argon. During the addition a lot of hydrogen gas is formed, so an exit with cotton wool and calcium chloride is placed in one of the neck. Benzyl

bromide (68.8 mL, 579.2 mmol, 1 eq) was then added dropwise and the reaction was stirred overnight. The reaction mixture was poured into ice and quenched with HCl (1M) until pH acid and extracted with EtOAc. The organic phase was then washed with brine and was dried over magnesium sulphate, filtered and excess solvent was removed by rotary evaporation under reduced pressure. The resulting residue was subjected to a pad of Silica with pure dichloromethane. The resulting material was precipitated with a minimum of dichloromethane in hexane. The resulting white precipitate was filtered and dried to afford the desired compound (80.7 g, 60 % yield). LC/MS 1.43 min (no ionisation). ¹H NMR (400 MHz, CDCl₃) δ 9.81 (s, 1H), 7.51 (d, *J* = 1.8 Hz, 1H), 7.45 – 7.34 (m, 7H), 7.06 (d, *J* = 8.1 Hz, 1H), 6.24 (s, 1H), 5.17 (s, 2H).

(ii) 4-((5-bromopentyl)oxy)-3-methoxybenzaldehyde (I4)

Vanillin I3 (50 g, 328 mmol) was dissolved in acetone (1 L). Dibromopentane (227 g, 985 mmol, 3 eq) and potassium carbonate (68 g, 492 mmol, 1.5 eq) were added. The slurry was warmed to 65°C and stirred for 2 hours, and then 80°C for 30 minutes. The resulting potassium carbonate was filtered and the excess solvent was removed by rotary evaporation under reduced pressure. The resulting residue was subjected to a pad of Silica: 7.5% EtOAc in Hexane (4 L) then 10% EtOAc in Hexane (1 L) and 25% EtOAc in Hexane to afford a white solid (53.7 g, 54 % yield). LC/MS 1.63 min (ES+) *m/z* (relative intensity) 302.53 ([M + H]⁺, 100). ¹H NMR (400 MHz, CDCl₃) δ 9.83 (s, 1H), 7.42 (dd, *J* = 8.1, 1.9 Hz, 1H), 7.40 (d, *J* = 1.9 Hz, 1H), 6.95 (d, *J* = 8.1 Hz, 1H), 4.10 (t, *J* = 6.6 Hz, 2H), 3.91 (s, 3H), 3.43 (t, *J* = 6.7 Hz, 2H), 1.92 (m, 4H), 1.64 (tt, *J* = 9.7, 6.2 Hz, 2H).

(iii) 3-(benzyloxy)-4-((5-(4-formyl-2-ethoxyphenoxy)pentyl)oxy) benzaldehyde (I5)

4-((5-bromopentyl)oxy)-3-methoxybenzaldehyde I4 (40.0 g, 132.81 mmol, 1 eq) and 3-(benzyloxy)-4-hydroxybenzaldehyde I2 (30.3 g, 132.81 mmol, 1 eq) were dissolved in dimethylformamide (200 mL). Potassium carbonate (13.8 g, 99.61 mmol, 0.75 eq) and tetrabutylammonium iodide (4.9 g, 13.28 mmol, 0.1 eq) were added. The reaction mixture was warmed to 80°C and stirred for 12 hours. The resulting potassium carbonate was filtered and the excess solvent was removed by rotary evaporation under reduced pressure. The resulting residue was dissolved in Ethyl acetate and washed subsequently with water, 1N NaOH, 1N HCl, water and brine. The organic phase was dried over magnesium sulphate, filtered and excess solvent was removed by rotary evaporation under reduced pressure to afford the desired compound (75 g, quantitative yield) as a light yellow oil. LC/MS 1.77 min (ES+) *m/z* (relative intensity) 449.15 [M + H]⁺, 471.25 [M + Na]⁺. ¹H NMR (400 MHz, CDCl₃) δ 9.83 (s, 1H), 9.81 (s, 1H), 7.46 (dd, *J* = 3.1, 1.4 Hz, 2H), 7.43 (d, *J* = 1.7 Hz, 2H), 7.41 (dd,

$J = 8.1, 1.9 \text{ Hz, 1H}$, 7.39 (d, $J = 1.8 \text{ Hz, 1H}$), 7.37 – 7.32 (m, 2H), 7.30 (dd, $J = 5.0, 3.6 \text{ Hz, 1H}$), 6.97 (d, $J = 8.1 \text{ Hz, 1H}$), 6.92 (d, $J = 8.1 \text{ Hz, 1H}$), 5.15 (s, 2H), 4.13 (t, $J = 6.4 \text{ Hz, 2H}$), 4.09 (t, $J = 6.6 \text{ Hz, 2H}$), 3.88 (s, 3H), 2.01 – 1.89 (m, 4H), 1.77 – 1.64 (m, 2H).

5 (iv) 5-(benzyloxy)-4-((5-(4-formyl-2-methoxy-5-nitrophenoxy)pentyl)oxy)-2-nitrobenzaldehyde (I6)

3-(benzyloxy)-4-((5-(4-formyl-2-ethoxyphenoxy)pentyl)oxy) benzaldehyde I5 (30 g, 66.40 mmol) was dissolved in dichloromethane (60 mL) and added to nitric acid (68%, 60 mL) at 0°C. The reaction mixture was stirred at 0°C for 20 minutes and at room temperature for 3
10 hours. The reaction mixture gets darker after 1 hour. After 2 hours, the LCMS showed no more starting material, so cold water was added and the precipitate was filtered and washed with water. The white solid was dried by vacuum. 42g of white solid was obtained (>100% yield due to water remaining). LC/MS 1.88 min, no ionisation. $^1\text{H NMR}$ (400 MHz, CDCl_3) δ 10.44 (s, 1H), 10.41 (s, 1H), 7.61 (s, 1H), 7.56 (s, 1H), 7.48 (s, 1H), 7.46 – 7.30 (m, 6H),
15 5.25 (s, 2H), 4.20 (dd, $J = 12.2, 5.9 \text{ Hz, 2H}$), 4.13 (dd, $J = 15.1, 8.7 \text{ Hz, 2H}$), 3.96 (s, 3H), 2.01 (dt, $J = 14.1, 6.4 \text{ Hz, 4H}$), 1.80 – 1.65 (m, 2H).

(v) 5-(benzyloxy)-4-((5-(4-carboxy-2-methoxy-5-nitrophenoxy)pentyl)oxy)-2-nitrobenzoic acid (I7)

20 A solution of sodium chlorite (35.3 g, 390 mmol, 5 eq) and sodium phosphate (26.2 g, 218.4 mmol, 2.8 eq) in water (250 mL) was added to a solution of 5-(benzyloxy)-4-((5-(4-formyl-2-methoxy-5-nitrophenoxy)pentyl)oxy)-2 nitrobenzaldehyde I6 (42 g, 78 mmol) in THF (200 mL). Hydrogen peroxide (60%, 103 mL, 2.18 mol, 28 eq) was then added quickly. No more starting material was observed after 30 minutes by LCMS/TLC. The reaction was then
25 quenched with 1N HCl and extracted with ethyl acetate. The organic layer was washed two times with brine, dried over magnesium sulphate; filtered and excess solvent was removed by rotary evaporation under reduced pressure. The resulting residue was dissolved in a minimum of dichloromethane and precipitated out with ether. Pale yellow solid (26 g, 58%) was filtered and washed with ether and used as crude for the next reaction.

30 LC/MS 1.69 min (ES+) m/z (relative intensity) 569.35 $[\text{M} + \text{H}]^+$.

(b) (2R,11aS)-2-((tert-butyldimethylsilyl)oxy)-8-((5-(((2R,11aS)-2-((tert-butyldimethylsilyl)oxy)-5,11-dioxo-7-((triisopropylsilyl)oxy)-10-((2-(trimethylsilyl)ethoxy)methyl)-2,3,5,10,11,11a-hexahydro-1H-benzo[e]pyrrolo[1,2-
35 a][1,4]diazepin-8-yl)oxy)pentyl)oxy)-7-methoxy-10-((2-(trimethylsilyl)ethoxy)methyl)-2,3-dihydro-1H-benzo[e]pyrrolo[1,2-a][1,4]diazepine-5,11(10H,11aH)-dione (I13)

157

(i) (2S,4R)-methyl 1-(4-((5-(2-(benzyloxy)-4-((2S,4R)-4-hydroxy-2-(methoxycarbonyl)pyrrolidine-1-carbonyl)-5-nitrophenoxy)pentyl)oxy)-5-methoxy-2-nitrobenzoyl)-4-hydroxypyrrolidine-2-carboxylate (19)

- 5 Oxalyl chloride (7.6 mL, 89.92 mmol, 3 eq) was added to a solution of 17 (17.1 g, 29.97 mmol) in dichloromethane (150 mL) and DMF (2 mL). After 20 min, a sample is taken and a small workup with MeOH is done. LCMS of this sample showed only one pic at 1.87 min and no starting material. The solvent was removed by rotary evaporation under reduced pressure and minimum of dichloromethane was added to dissolve the crude and
- 10 triturated with diethyl ether. The yellow solid formed was filtered and added portion wise to a solution of 10 (13.6 g, 74.93 mmol, 2.5 eq) and triethylamine (20.92 mL, 149.87 mmol, 5eq) in dichloromethane (100 mL) at -40°C. The reaction was complete after few minutes. The solvent was removed by rotary evaporation under reduced pressure and the resulting residue was subjected to flash column chromatography (silica gel; 50% ethyl acetate in
- 15 hexane to 100% ethyl acetate to collect the mono addition product and then 5% to 20% methanol in dichloromethane). Pure fractions were collected and combined and excess eluent was removed by rotary evaporation under reduced pressure to give the product (15 g, 61% over 3 steps). LC/MS 1.47 min (ES+) *m/z* (relative intensity) 825.45 ([*M* + *H*]⁺, 100). ¹H NMR (400 MHz, CDCl₃) δ 7.65 (s, 1H), 7.61 (s, 1H), 7.45 – 7.27 (m, 5H), 6.89 (s, 1H), 6.81 (s, 1H), 5.20 (s, 2H), 4.85 – 4.74 (m, 2H), 4.40 (d, *J* = 20.3 Hz, 2H), 4.21 – 4.02 (m, 4H), 3.91 (s, 3H), 3.79 (s, 6H), 3.53 – 3.41 (m, 2H), 3.13 (d, *J* = 11.1 Hz, 1H), 3.04 (d, *J* = 11.0 Hz, 1H), 2.79 – 2.72 (m, *J* = 4.3 Hz, 1H), 2.63 (s, 1H), 2.42 – 2.32 (m, 2H), 2.21 – 2.06 (m, *J* = 11.3 Hz, 2H), 2.02 – 1.89 (m, 4H), 1.76 – 1.65 (m, 2H).

- 25 (ii) (2S,4R)-methyl 1-(4-((5-(2-(benzyloxy)-4-((2S,4R)-4-((tert-butyldimethylsilyl)oxy)-2-(methoxycarbonyl)pyrrolidine-1-carbonyl)-5-nitrophenoxy)pentyl)oxy)-5-methoxy-2-nitrobenzoyl)-4-((tert-butyldimethylsilyl)oxy)pyrrolidine-2-carboxylate (110)

I9 (14 g, 16.97 mmol), tert-butyldimethylsilyl chloride (12.8 g, 84.87 mmol, 5 eq) and imidazole (13.9 g, 203.64 mmol, 12 eq) were melted together at 120°C (a drop of dichloromethane was added to mix the different solids on the side of the flask). The reaction was complete after 30 minutes. The resulting residue was subjected to flash column chromatography (silica gel; 10% ethyl acetate in hexane to 100% ethyl acetate). Pure fractions were collected and combined and excess eluent was removed by rotary evaporation under reduced pressure to give the product (17 g, quantitative).

LC/MS 2.17 min. ¹H NMR (400 MHz, CDCl₃) δ 7.69 (s, 1H), 7.65 (s, 1H), 7.43 – 7.27 (m, 5H), 6.87 (s, 1H), 6.78 (s, 1H), 5.17 (d, J = 5.6 Hz, 2H), 4.73 – 7.79 (m, 2H), 4.45 – 4.34 (m, 2H), 4.32 – 4.10 (m, 2H), 4.09 – 4.00 (m, 2H), 3.90 (s, 3H), 3.80 (s, 3H), 3.79 (s, 3H), 3.48 – 3.41 (m, 1H), 3.29 (dd, J = 10.3, 4.6 Hz, 1H), 3.03 (dd, J = 10.4, 2.4 Hz, 2H), 2.96 (dd, J = 10.2, 2.8 Hz, 2H), 2.31 – 2.21 (m, 2H), 2.19 – 2.05 (m, 2H), 2.00 – 1.88 (m, 4H), 1.74 – 1.66 (m, 2H), 0.82 (s, 18H), 0.02 (d, J = 1.1 Hz, 6H), -0.03 (d, J = 5.5 Hz, 6H).

(iii) (2R,11aS)-2-((tert-butyldimethylsilyl)oxy)-8-((5-(((2R,11aS)-2-((tert-butyldimethylsilyl)oxy)-7-hydroxy-5,11-dioxo-2,3,5,10,11,11a-hexahydro-1H-benzo[e]pyrrolo[1,2-a][1,4]diazepin-8-yl)oxy)pentyl)oxy)-7-methoxy-2,3-dihydro-1H-benzo[e]pyrrolo[1,2-a][1,4]diazepine-5,11(10H,11aH)-dione (I11)

Ammonium formate (106 g, 168 mmol, 10 eq) was added to a solution of I10 (17.7 g, 16.80 mmol) in ethanol (500 mL). Palladium on carbon (1.8 g, 10%) was wetted with ethyl acetate and added to the reaction mixture. The solution was warmed to 70°C (at 69°C, yellow then white gas formed). Termination of the evolution of gas marked the completion of the reaction (around 20 min). The reaction mixture was then filtered through celite and washed with ethyl acetate. The solvent was removed by rotary evaporation. The residue was dissolved in ethyl acetate and washed with saturated aqueous ammonium chloride and brine, dried over magnesium sulphate; filtered and excess solvent was removed by rotary evaporation under reduced pressure to give the desired compound (13.9 g, 98%) as a yellow gum.

LC/MS 1.91 min, (ES+) m/z (relative intensity) 839.35 ([M + H]⁺, 100).

(iv) (2R,11aS)-2-((tert-butyldimethylsilyl)oxy)-8-((5-(((2R,11aS)-2-((tert-butyldimethylsilyl)oxy)-5,11-dioxo-7-((triisopropylsilyl)oxy)-2,3,5,10,11,11a-hexahydro-1H-benzo[e]pyrrolo[1,2-a][1,4]diazepin-8-yl)oxy)pentyl)oxy)-7-methoxy-2,3-dihydro-1H-benzo[e]pyrrolo[1,2-a][1,4]diazepine-5,11(10H,11aH)-dione (I12)

I11 (13.9 g, 16.56 mmol), triisopropylsilyl chloride (3.6 mL, 18.36 mmol, 1.1 eq) and imidazole (3.4 g, 49.94 mmol, 3 eq) were melted together at 120°C (a drop of dichloromethane was added to mix the different solids on the side of the flask). The reaction

was complete after 30 minutes. The resulting residue was subjected to flash column chromatography (silica gel; 10% ethyl acetate in hexane to 100% ethyl acetate). Pure fractions were collected and combined and excess eluent was removed by rotary evaporation under reduced pressure to give the product (15.4 g, 93%). LC/MS 2.31 min, ¹H NMR (400 MHz, CDCl₃) δ 9.81 (s, 1H), 8.70 (s, 1H), 8.65 (s, 1H), 7.43 (s, 2H), 6.47 (s, 1H), 6.42 (s, 1H), 4.54 – 4.43 (m, 2H), 4.17 (dt, *J* = 7.6, 3.8 Hz, 2H), 4.00 (t, *J* = 6.4 Hz, 2H), 3.95 (t, *J* = 6.2 Hz, 2H), 3.87 (s, 3H), 3.73 – 3.58 (m, 4H), 2.84 – 2.76 (m, 2H), 2.09 – 1.96 (m, 1H), 1.92 – 1.85 (m, 4H), 1.68 – 1.62 (m, 2H), 1.31 – 1.17 (m, 3H), 1.08 (d, *J* = 2.5 Hz, 9H), 1.06 (d, *J* = 2.5 Hz, 9H), 0.85 (s, 9H), 0.84 (s, 9H), 0.06 (s, 6H), 0.07 (s, 6H).

(v) (2*R*,11*aS*)-2-((*tert*-butyldimethylsilyl)oxy)-8-((5-(((2*R*,11*aS*)-2-((*tert*-butyldimethylsilyl)oxy)-5,11-dioxo-7-((*triisopropylsilyl*)oxy)-10-((2-(trimethylsilyl)ethoxy)methyl)-2,3,5,10,11,11*a*-hexahydro-1*H*-benzo[*e*]pyrrolo[1,2-*a*][1,4]diazepin-8-yl)oxy)pentyl)oxy)-7-methoxy-10-((2-(trimethylsilyl)ethoxy)methyl)-2,3-dihydro-1*H*-benzo[*e*]pyrrolo[1,2-*a*][1,4]diazepine-5,11(10*H*,11*aH*)-dione (I13)

I12 (15.4 g, 15.74 mmol) was dissolved in dry tetrahydrofuran (250 mL) and cooled to -30°C (dry ice / acetone). *n*-Butyllithium (29 mL, 46.41 mmol, 3 eq) was then added dropwise and the reaction mixture was stirred for 1 hour at -30°C. 2-(Trimethylsilyl)ethoxymethyl chloride (8.2 mL, 46.41 mmol, 3 eq) was then added dropwise and the cold bath was removed. The reaction mixture was stirred at ambient temperature for 12 hours and the solvent was removed by rotary evaporation. The residue was dissolved in ethyl acetate and washed with water and brine, dried over magnesium sulphate; filtered and excess solvent was removed by rotary evaporation under reduced pressure to give the desired compound as yellow oil used as crude for the next reaction. ¹H NMR (400 MHz, CDCl₃) δ 7.34 (s, 1H), 7.33 (s, 1H), 7.20 (s, 1H), 7.15 (s, 1H), 5.49 (dd, *J* = 10.0, 1.8 Hz, 2H), 4.64 (dd, *J* = 9.9, 7.5 Hz, 2H), 4.56 (dt, *J* = 8.9, 5.7 Hz, 2H), 4.21 (dt, *J* = 8.6, 4.4 Hz, 2H), 4.09 – 3.93 (m, 4H), 3.91 (s, 3H), 3.82 – 3.61 (m, 6H), 3.61 – 3.50 (m, 2H), 2.90 – 2.76 (m, 2H), 2.03 – 1.97 (m, 2H), 1.97 – 1.86 (m, 4H), 1.75 – 1.64 (m, 2H), 1.34 – 1.19 (m, 3H), 1.10 (d, *J* = 2.7 Hz, 9H), 1.08 (d, *J* = 2.7 Hz, 9H), 0.96 (ddd, *J* = 9.1, 6.9, 2.0 Hz, 4H), 0.86 (d, *J* = 2.9 Hz, 9H), 0.85 (d, *J* = 2.9 Hz, 9H), 0.09 (s, 6H), 0.07 (s, 6H), 0.01 (d, *J* = 3.2 Hz, 18H).

(c) (S)-7-hydroxy-8-((5-(((S)-7-methoxy-2-methyl-5,11-dioxo-10-((2-(trimethylsilyl)ethoxy)methyl)-5,10,11,11*a*-tetrahydro-1*H*-benzo[*e*]pyrrolo[1,2-*a*][1,4]diazepin-8-yl)oxy)pentyl)oxy)-2-methyl-10-((2-(trimethylsilyl)ethoxy)methyl)-1*H*-benzo[*e*]pyrrolo[1,2-*a*][1,4]diazepine-5,11(10*H*,11*aH*)-dione (I18)

(ii) (*S*)-7-methoxy-10-((2-(trimethylsilyl)ethoxy)methyl)-8-((5-(((*S*)-2,5,11-trioxo-7-
 20 ((triisopropylsilyl)oxy)-10-((2-(trimethylsilyl)ethoxy)methyl)-2,3,5,10,11,11*a*-hexahydro-1*H*-benzo[*e*]pyrrolo[1,2-*a*][1,4]diazepin-8-yl)oxy)pentyl)oxy)-1*H*-benzo[*e*]pyrrolo[1,2-*a*][1,4]diazepine-2,5,11(3*H*,10*H*,11*aH*)-trione (I15)

TCCA (1.62 g, 7.00 mmol, 1.2 eq) was added to a solution of crude I14 (5.84 mmol), TEMPO (90 mg, 0.58 mmol, 0.1 eq) and sodium acetate (1.14 g, 14.00 mmol, 2.4 eq) in
 25 dichloromethane (120 mL) at -10°C (acetone / ice). The reaction was stirred for 30 min and filtered through celite. The reaction mixture was then quenched with saturated aqueous

sodium bicarbonate. The organic phase washed with sodium thiosulfate and brine, dried over magnesium sulphate; filtered and excess solvent was removed by rotary evaporation under reduced pressure. The resulting residue was subjected to flash column chromatography (silica gel; 20% to 70% ethyl acetate in hexane). Pure fractions were collected and combined and excess eluent was removed by rotary evaporation under reduced pressure to give the product (3.21 g, 54% over 3 steps). LC/MS 2.17 min, (ES+) m/z (relative intensity) 1023.75 $[M + H]^+$, 1H NMR (400 MHz, $CDCl_3$) δ 7.32 (s, 2H), 7.23 (s, 1H), 7.18 (s, 1H), 5.53 (dd, $J = 10.0, 1.6$ Hz, 2H), 4.70 (t, $J = 9.6$ Hz, 2H), 4.66 – 4.58 (m, 2H), 4.22 (d, $J = 20.1$ Hz, 2H), 4.13 – 3.95 (m, 4H), 3.91 (s, 3H), 3.89 – 3.74 (m, 4H), 3.72 – 3.62 (m, 2H), 3.56 (ddd, $J = 19.2, 5.8, 3.1$ Hz, 2H), 2.78 (dd, $J = 19.3, 9.9$ Hz, 2H), 1.95 (dd, $J = 14.6, 7.3$ Hz, 4H), 1.76 – 1.63 (m, 2H), 1.33 – 1.23 (m, 3H), 1.10 (s, 9H), 1.09 (s, 9H), 1.02 – 0.90 (m, 4H), 0.02 (s, 18H).

(iii) (S)-8-((5-(((S)-5,11-dioxo-2-(((trifluoromethyl)sulfonyl)oxy)-7-((triisopropylsilyl)oxy)-10-((2-(trimethylsilyl)ethoxy)methyl)-5,10,11,11a-tetrahydro-1H-benzo[e]pyrrolo[1,2-a][1,4]diazepin-8-yl)oxy)pentyl)oxy)-7-methoxy-5,11-dioxo-10-((2-(trimethylsilyl)ethoxy)methyl)-5,10,11,11a-tetrahydro-1H-benzo[e]pyrrolo[1,2-a][1,4]diazepin-2-yl trifluoromethanesulfonate (I16)

Anhydrous 2,6-lutidine (2.12 mL, 18.17 mmol, 6.2 eq) was injected in one portion to a solution of I15 (3 g, 2.93 mmol) in dry dichloromethane (40 mL) at $-50^\circ C$ (acetone / dry ice). Triflic anhydride (2.12 mL, 18.17 mmol, 6 eq) was then added slowly whilst monitoring the temperature. After 20 minutes, the reaction, following a mini work-up (dichloromethane / water), was revealed to be complete by LC/MS. Cold water was added to the still cold reaction mixture and the organic layer was separated and washed with cold saturated sodium bicarbonate, brine, dried over magnesium sulphate; filtered and excess solvent was removed by rotary evaporation under reduced pressure. The resulting residue was subjected to flash column chromatography (silica gel; 5% to 20% ethyl acetate in hexane). Pure fractions were collected and combined and excess eluent was removed by rotary evaporation under reduced pressure to give the product (3.1 g, 82%). LC/MS 2.37 min, no ionisation, 1H NMR (400 MHz, $CDCl_3$) δ 7.32 (s, 2H), 7.23 (s, 1H), 7.19 (s, 1H), 7.14 (s, 1H), 7.11 (s, 1H), 5.54 (d, $J = 10.0$ Hz, 2H), 4.74 – 4.66 (m, 2H), 4.63 (d, $J = 11.0$ Hz, 2H), 4.09 – 3.96 (m, 4H), 3.94 – 3.87 (m, 2H), 3.90 (s, 3H), 3.82 – 3.76 (m, 2H), 3.69 – 3.65 (m, 2H), 3.22 – 3.08 (m, 2H), 1.99 – 1.90 (m, 4H), 1.75 – 1.64 (m, 2H), 1.33 – 1.21 (m, 3H), 1.11 (d, $J = 1.1$ Hz, 9H), 1.09 (d, $J = 1.1$ Hz, 9H), 1.01 – 0.91 (m, 4H), 0.02 (s, 18H).

(iv) (S)-7-methoxy-2-methyl-8-((5-(((S)-2-methyl-5,11-dioxo-7-((triisopropylsilyl)oxy)-10-((2-(trimethylsilyl)ethoxy)methyl)-5,10,11,11a-tetrahydro-1H-benzo[e]pyrrolo[1,2-a][1,4]diazepin-8-yl)oxy)pentyl)oxy)-10-((2-(trimethylsilyl)ethoxy)methyl)-1H-benzo[e]pyrrolo[1,2-a][1,4]diazepine-5,11(10H,11aH)-dione (I17)

- 5 Triphenylarsine (588 mg, 1.92 mmol, 0.8 eq) was added to a mixture of triflate I16 (3.1 g, 2.4 mmol, 1eq), methylboronic acid (1.0 g, 16.8 mmol, 7 eq), silver oxide (4.45 g, 19.2 mmol, 8 eq) and potassium phosphate tribasic (6.1 g, 28.8 mmol, 12 eq) in dry dioxane (40 mL) under an argon atmosphere. The reaction was flushed with argon 3 times and
- 10 bis(benzonitrile)palladium(II) chloride (184 mg, 0.48 mmol, 0.2 eq) was added. The reaction was flushed with argon 3 more times before being stirred at 70 °C. After 1 hour the reaction was observed to be complete by TLC and filtered through a pad celite. The solvent was removed by rotary evaporation under reduced pressure. The resulting residue was subjected to column flash chromatography (silica gel; 20% to 50% ethyl acetate / hexane). Pure
- 15 fractions were collected and combined, and excess eluent was removed by rotary evaporation under reduced pressure afforded the product (1.1 g, 36 %). LC/MS 2.34 min, no ionisation, ¹H NMR (400 MHz, CDCl₃) δ 7.35 (s, 2H), 7.20 (s, 1H), 7.16 (s, 1H), 6.68 (d, J = 1.3 Hz, 1H), 6.64 (d, J = 1.4 Hz, 1H), 5.53 (s, 1H), 5.51 (s, 1H), 4.67 (t, J = 10.1 Hz, 2H), 4.45 (dt, J = 10.5, 3.2 Hz, 2H), 4.08 – 3.94 (m, 4H), 3.90 (s, 3H), 3.77 (dd, J = 8.9, 7.5 Hz, 2H), 3.68 (dt, J = 10.0, 5.2 Hz, 2H), 3.43 (d, J = 16.5 Hz, 2H), 2.78 (d, J = 10.4 Hz, 2H), 2.00 – 1.86 (m, 4H), 1.83 (s, 3H), 1.82 (s, 3H), 1.72 – 1.68 (m, 2H), 1.30 – 1.25 (m, 3H), 1.09 (s, 9H), 1.06 (s, 9H), 0.99 – 0.94 (m, 4H), 0.02 (s, 18H).

(v) (S)-7-hydroxy-8-((5-(((S)-7-methoxy-2-methyl-5,11-dioxo-10-((2-(trimethylsilyl)ethoxy)methyl)-5,10,11,11a-tetrahydro-1H-benzo[e]pyrrolo[1,2-a][1,4]diazepin-8-yl)oxy)pentyl)oxy)-2-methyl-10-((2-(trimethylsilyl)ethoxy)methyl)-1H-benzo[e]pyrrolo[1,2-a][1,4]diazepine-5,11(10H,11aH)-dione (I18)

- 25 Lithium acetate (110 mg, 1.08 mmol, 1 eq) was added to a solution of compound I17 (1.1 g, 1.08 mmol) in wet dimethylformamide (20 mL, 50:1 DMF/water). The reaction was stirred for 12 hours at ambient temperature and diluted with ethyl acetate and washed with citric acid
- 30 (pH ~ 3), brine, dried over magnesium sulphate; filtered and excess solvent was removed by rotary evaporation under reduced pressure to provide the product (1.03 g, quantitative). LC/MS 1.98 min, (ES+) m/z (relative intensity) 863.35 [M + H]⁺, ¹H NMR (400 MHz, CDCl₃) δ 7.44 (s, 1H), 7.35 (s, 1H), 7.20 (s, 1H), 7.19 (s, 1H), 6.70 – 6.62 (m, 2H), 6.21 (br, 1H), 5.51 (dd, J = 10.0, 5.3 Hz, 2H), 4.66 (dd, J = 11.3, 10.1 Hz, 2H), 4.46 (dd, J = 10.4, 3.2 Hz, 2H), 4.18 – 3.99 (m, 4H), 3.90 (s, 3H), 3.78 (td, J = 9.7, 6.9 Hz, 2H), 3.67 (td, J = 9.7, 6.8 Hz,
- 35

2H), 3.49 – 3.35 (m, 2H), 2.81 – 2.68 (m, 2H), 2.00 – 1.89 (m, 4H), 1.82 (s, 3H), 1.81 (s, 3H), 1.75 – 1.63 (m, 2H), 0.97 (ddd, $J = 9.9, 6.6, 3.3$ Hz, 4H), 0.01 (s, 18H).

(d) *Allyl ((S)-1-(((S)-1-((4-(((3-bromopropyl)carbamoyl)oxy)methyl)phenyl)amino)-1-oxopropan-2-yl)amino)-3-methyl-1-oxobutan-2-yl)carbamate (I21)*

Triethylamine (0.35 mL, 2.51 mmol, 2.2 eq) was added to a stirred solution of the 3-bromopropylamine hydrobromide I20 (250 mg, 1.14 mmol) and triphosgene (122 mg, 0.41 mmol, 0.36 eq) in dry tetrahydrofuran (5 mL). The progress of the isocyanate reaction was monitored by periodically removing aliquots from the reaction mixture and quenching with methanol and performing LC/MS analysis. Once the isocyanate formation was complete a solution of the alloc-Val-Ala-PABOH I19 (650 mg, 1.71 mmol, 1.5 eq) and triethylamine (0.24 mL, 1.71 mmol, 1.5 eq) in dry tetrahydrofuran (5 mL) was rapidly added by injection to the freshly prepared isocyanate. The reaction mixture was allowed to stir at 40 °C for 2 hours. As the starting materials were not soluble, 1 mL of DMF was added and the reaction was stirred at 40 °C for 12 hours when it showed around 40% conversion. Excess solvent was removed by rotary evaporation under reduced pressure. The resulting residue was subjected to flash column chromatography (silica gel; gradient, 50 % ethyl acetate to 100% ethyl acetate in hexane). Pure fractions were collected and combined and excess eluent was removed by rotary evaporation under reduced pressure to give the desired product (190 mg, 31%). LC/MS 1.48 min (no ionisation). ^1H NMR (400 MHz, DMSO) δ 9.97 (s, 1H), 8.14 (d, $J = 7.0$ Hz, 1H), 7.57 (d, $J = 8.5$ Hz, 2H), 7.28 (d, $J = 8.5$ Hz, 2H), 7.23 (d, $J = 8.6$ Hz, 1H), 5.99 – 5.82 (m, 1H), 5.30 (d, $J = 17.2$ Hz, 1H), 5.17 (d, $J = 10.2$ Hz, 1H), 4.94 (s, 2H), 4.52 – 4.45 (m, 2H), 4.43 – 4.40 (m, 1H), 3.93 – 3.83 (m, 1H), 3.51 (t, $J = 6.6$ Hz, 2H), 3.17 (d, $J = 5.0$ Hz, 1H), 3.11 (dd, $J = 12.6, 6.6$ Hz, 2H), 1.99 – 1.90 (m, 3H), 1.30 (d, $J = 7.1$ Hz, 3H), 0.89 (t, $J = 7.1$ Hz, 3H), 0.84 (d, $J = 6.7$ Hz, 3H).

Example 1

(a) 4-((S)-2-((S)-2-(((allyloxy)carbonyl)amino)-3-methylbutanamido)propanamido)benzyl (3-(((S)-8-((5-(((S)-7-methoxy-2-methyl-5,11-dioxo-10-((2-(trimethylsilyl)ethoxy)methyl)-5,10,11,11a-tetrahydro-1H-benzo[e]pyrrolo[1,2-a][1,4]diazepin-8-yl)oxy)pentyl)oxy)-2-methyl-5,11-dioxo-10-((2-(trimethylsilyl)ethoxy)methyl)-5,10,11,11a-tetrahydro-1H-benzo[e]pyrrolo[1,2-a][1,4]diazepin-7-yl)oxy)propyl)carbamate (1)

Tetrabutylammonium iodide (16 mg, 0.042 mmol, 0.2 eq), potassium carbonate (43 mg, 0.314 mmol, 1.5 eq) and 121 (170 mg, 0.314 mmol, 1.5 eq) were added to a solution of alcohol 118 (180 mg, 0.209 mmol) in dimethylformamide (3 mL). The reaction mixture was stirred for 2 hour at 80 °C after when the reaction was observed to be complete by LC/MS. The reaction mixture was diluted with ethyl acetate and washed with water three times, brine, dried over magnesium sulphate; filtered and excess solvent was removed by rotary evaporation under reduced pressure. The resulting residue was subjected to flash column chromatography (silica gel; gradient, 50 % ethyl acetate to 100% ethyl acetate in hexane). Pure fractions were collected and combined and excess eluent was removed by rotary evaporation under reduced pressure to give the desired product (180 mg, 65%). LC/MS 2.01 min, (ES+) m/z (relative intensity) 1323.45 $[M + H]^+$, 1H NMR (400 MHz, $CDCl_3$) δ 8.64

(s, 1H), 7.47 (d, $J = 8.1$ Hz, 2H), 7.31 (s, 2H), 7.24 – 7.23 (m, 2H), 7.17 (s, 2H), 6.71 – 6.64 (m, 2H), 6.62 (d, $J = 7.5$ Hz, 1H), 5.93 – 5.83 (m, 1H), 5.49 (dd, $J = 10.0, 2.2$ Hz, 2H), 5.30 – 5.26 (m, 2H), 5.28 (d, $J = 17.0$ Hz, 1H), 5.00 (s, 2H), 4.74 – 4.65 (m, 2H), 4.60 – 4.55 (m, 2H), 4.49 – 4.38 (m, 2H), 3.99 (br, 6H), 3.82 (s, 3H), 3.79 – 3.72 (m, 2H), 3.70 – 3.57 (m, 2H), 3.44 – 3.40 (m, 4H), 2.74 (dd, $J = 16.6, 10.8$ Hz, 2H), 2.01 (br, 4H), 1.85 – 1.82 (m, 10H), 1.60 (br, 2H), 1.42 (d, $J = 6.8$ Hz, 3H), 1.01 – 0.85 (m, 10H), 0.03 – -0.09 (m, 18H).

(b) 4-((S)-2-((S)-2-(((allyloxy)carbonyl)amino)-3-methylbutanamido)propanamido)benzyl (3-(((S)-8-((5-(((S)-7-methoxy-2-methyl-5-oxo-5,11a-dihydro-1H-benzo[e]pyrrolo[1,2-a][1,4]diazepin-8-yl)oxy)pentyl)oxy)-2-methyl-5-oxo-5,11a-dihydro-1H-benzo[e]pyrrolo[1,2-a][1,4]diazepin-7-yl)oxy)propyl)carbamate (2)

Compound 1 (180 mg, 0.136 mmol) was dissolved in dry THF (5 mL) and cooled to -78°C . Lithium triethylborohydride (0.34 mL, 0.34 mmol, 2.5 eq) was then added dropwise. The reaction was stirred under argon at -78°C . After 30 minutes, the reaction, following a mini work-up (water), was revealed to be complete by LC/MS. The cold bath was removed and water added. The reaction mixture was extracted with ethyl acetate and washed with brine, dried over magnesium sulphate; filtered and excess solvent was removed by rotary evaporation under reduced pressure. The resulting residue was dissolved with a mixture of dichloromethane / methanol / water (3 / 6 / 1, 2 mL / 6 mL / 0.7 mL). Silica gel was added until the solution gets thick and left stirring at ambient temperature for 5 days. The reaction mixture was filtered and washed with brine, dried over magnesium sulphate; filtered and excess solvent was removed by rotary evaporation under reduced pressure. The resulting residue was subjected to column flash chromatography (silica gel; 5% methanol / chloroform). Pure fractions were collected and combined, and excess eluent was removed by rotary evaporation under reduced pressure afforded the desired product (82 mg, 58 %). LC/MS 1.49 min, (ES+) m/z (relative intensity) 1031.45 $[\text{M} + \text{H}]^{+}$, ^1H NMR (400 MHz, CDCl_3) δ 8.73 (s, 1H), 7.87 (s, 1H), 7.81 (d, $J = 4.0$ Hz, 1H), 7.48 (br, 4H), 7.28 – 7.26 (m, 2H), 7.17 (d, $J = 5.5$ Hz, 1H), 6.80 – 6.75 (m, 4H), 5.92 – 5.89 (m, 1H), 5.78 (br, 1H), 5.30 (d, $J = 8.5$ Hz, 2H), 5.22 (d, $J = 10.8$ Hz, 1H), 5.02 (s, 2H), 4.61 – 4.57 (m, 4H), 4.27 – 4.24 (m, 2H), 4.05 – 3.76 (m, 6H), 3.87 (s, 3H), 3.79 – 3.70 (m, 2H), 3.49 – 3.37 (m, 4H), 3.22 – 3.10 (m, 1H), 2.98 – 2.94 (m, 1H), 2.20 – 2.08 (m, 1H), 2.02 (br, 4H), 1.84 (s, 3H), 1.79 (s, 3H), 1.41 (d, $J = 6.8$ Hz, 3H), 1.02 – 0.82 (m, 6H).

(c) 4-((S)-2-((S)-2-amino-3-methylbutanamido)propanamido)benzyl (3-(((S)-8-((5-(((S)-7-methoxy-2-methyl-5-oxo-5,11a-dihydro-1H-benzo[e]pyrrolo[1,2-a][1,4]diazepin-8-

yl)oxy)pentyl)oxy)-2-methyl-5-oxo-5,11a-dihydro-1H-benzo[e]pyrrolo[1,2-a][1,4]diazepin-7-yl)oxy)propyl)carbamate (3)

Tetrakis(triphenylphosphine)palladium(0) (6 mg, 0.005 mmol, 0.06 eq) was added to a solution of compound 2 (80 mg, 0.077 mmol) and pyrrolidine (16 μ L, 0.193 mmol, 2.5 eq) in dry dichloromethane (2 mL). The reaction was flushed with argon three times and stirred 30 minutes at room temperature. Then the reaction was diluted with dichloromethane and washed sequentially with saturated aqueous ammonium chloride and brine. The organic phase was dried over magnesium sulphate filtered and excess dichloromethane removed by rotary evaporation under reduced pressure. The resulting residue was used as a crude mixture for the next reaction. LC/MS 1.15 min, (ES⁺) *m/z* (relative intensity) 947.55 [M + H]⁺.

(d) *4-((2S,5S)-37-(2,5-dioxo-2,5-dihydro-1H-pyrrol-1-yl)-5-isopropyl-2-methyl-4,7,35-trioxo-10,13,16,19,22,25,28,31-octaoxa-3,6,34-triazaheptatriacontanamido)benzyl (3-(((S)-8-((5-(((S)-7-methoxy-2-methyl-5-oxo-5,11a-dihydro-1H-benzo[e]pyrrolo[1,2-a][1,4]diazepin-8-yl)oxy)pentyl)oxy)-2-methyl-5-oxo-5,11a-dihydro-1H-benzo[e]pyrrolo[1,2-a][1,4]diazepin-7-yl)oxy)propyl)carbamate (4)*

1-ethyl-3-(3'-dimethylaminopropyl)carbodiimide (EDCI, 15 mg, 0.080 mmol, 1.1 eq) was added to a solution of crude 3 (0.077 mmol) and Mal-(PEG)₈-acid (48 mg, 0.080 mmol, 1.1 eq) in dry dichloromethane (2 mL). The reaction was degassed three times with Argon and stirred for 2 hours and the presence of starting material was no longer observed by LC/MS. The reaction was diluted with dichloromethane and washed sequentially with water and brine. The organic phase was dried over magnesium sulphate filtered and excess dichloromethane removed by rotary evaporation under reduced pressure. The resulting residue was subjected to flash column chromatography (silica gel; 100% chloroform to 10% methanol in chloroform). Pure fractions were collected and combined and excess eluent was removed by rotary evaporation under reduced pressure to give the desired product (40mg). This residue was then purified further by preparative HPLC (3.7 mg, 31% over 2 steps). LC/MS 1.40 min, (ES⁺) *m/z* (relative intensity) 1521.95 [M + H]⁺. ¹H NMR (400 MHz, CDCl₃) δ 8.72 (s, 1H), 7.83 (s, 1H), 7.80 (d, *J* = 3.9 Hz, 1H), 7.63 – 7.61 (m, 2H), 7.47 (d, *J* = 8.3 Hz, 2H), 7.26 (br, 2H), 6.77 – 6.75 (m, 4H), 6.69 (s, 2H), 5.02 (s, 2H), 4.64 – 4.62 (m, 2H), 4.24 – 4.21 (m, 4H), 4.19 – 3.95 (m, 4H), 3.89 (s, 2H), 3.86 – 3.75 (m, 4H), 3.63 (br, 32H), 3.53 – 3.33 (m, 8H), 3.18 – 3.14 (m, 2H), 2.98 – 2.94 (m, 2H), 2.53 – 5.49 (m, 3H), 2.03 (s, 2H), 1.83 (br, 10H), 1.56 (br, 2H), 1.42 (s, 3H), 1.05 – 0.90 (m, 6H).

Example 2*General antibody conjugation procedure*

Antibodies are diluted to 1-5 mg/mL in a reduction buffer (examples: phosphate buffered saline PBS, histidine buffer, sodium borate buffer, TRIS buffer). A freshly prepared solution of

5 TCEP (tris(2-carboxyethyl)phosphine hydrochloride) is added to selectively reduce cysteine disulfide bridges. The amount of TCEP is proportional to the target level of reduction, within 1 to 4 molar equivalents per antibody, generating 2 to 8 reactive thiols. After reduction for several hours at 37°C, the mixture is cooled down to room temperature and excess drug-linker can be added as a diluted DMSO solution (final DMSO content of up to 10%

10 volume/volume of reaction mixture). The mixture is gently shaken at either 4°C or room temperature for the appropriate time, generally 1-3 hours. Excess reactive thiols can be reacted with a 'thiol capping reagent' like N-ethyl maleimide (NEM) at the end of the conjugation. Antibody-drug conjugates may be concentrated using centrifugal spin-filters with a molecular weight cut-off of 10 kDa or higher, then purified by tangential flow filtration

15 (TFF) or Fast Protein Liquid Chromatography (FPLC). Corresponding antibody-drug conjugates may be determined by analysis by High-Performance Liquid Chromatography (HPLC) or Ultra-High-Performance Liquid Chromatography (UHPLC) to assess drug-per-antibody ratio (DAR) using reverse-phase chromatography (RP) or Hydrophobic-Interaction Chromatography (HIC), coupled with UV-Visible, Fluorescence or Mass-Spectrometer

20 detection; aggregate level and monomer purity can be analysed by HPLC or UHPLC using size-exclusion chromatography coupled with UV-Visible, Fluorescence or Mass-Spectrometer detection. Final conjugate concentration can be determined by a combination of spectroscopic (absorbance at 280, 214 and 330 nm) and biochemical assay (bicinchonic acid assay BCA; Smith, P.K., *et al.* (1985) *Anal. Biochem.* **150** (1): 76–85; using a known-

25 concentration IgG antibody as reference). Antibody-drug conjugates are generally sterile filtered using 0.2 µm filters under aseptic conditions, and stored at +4°C, -20°C or -80°C.

Conjugate A (Herceptin-4, ConjA)

Herceptin™ (3.5 mg, 23.3 nanomoles) was diluted into 3.15 mL of a reduction buffer

30 containing 10 mM sodium borate pH 8.4, 2.5 mM EDTA and a final antibody concentration of 1.11 mg/mL. A 10 mM solution of TCEP was added (1.65 molar equivalent/antibody, 38.5 nanomoles, 3.85 µL) and the reduction mixture was heated at +37°C for 1.5 hours in an incubator. After cooling down to room temperature, compound **4** was added as a DMSO solution (25 molar equivalent/antibody, 583 nanomoles, in 0.35 mL DMSO). The solution

35 was mixed for 1.5 hours at room temperature, then the conjugation was quenched by addition of *N*-acetyl cysteine (1.6 micromole, 116.7 µL at 10 mM), then injected into an

AKTA™ Pure FPLC using a GE Healthcare HiLoad™ 26/600 column packed with Superdex 200 PG, eluting with 2.6 mL/min of sterile-filtered phosphate-buffered saline (PBS). Fractions corresponding to ConjA monomer peak were pooled, concentrated using a 15mL Amicon Ultracell 50KDa MWCO spin filter, analysed and sterile-filtered.

5

UHPLC analysis on a Shimadzu Prominence system using a Phenomenex Aeris 3.6u XB-C18 150 x 2.1 mm column eluting with a gradient of water and acetonitrile on a reduced sample of ConjA at 280 nm and 330 nm (Compound **4** specific) shows a mixture of light and heavy chains attached to several molecules of compound **4**, consistent with a drug-per-antibody ratio (DAR) of 2.14 molecules of compound **4** per antibody.

10

UHPLC analysis on a Shimadzu Prominence system using a Tosoh Bioscience TSKgel G3000SWXL 5 µm 7.8 x 300 mm column (with a 7 µm 6.0 x 40 mm guard column) eluting with sterile-filtered SEC buffer containing 200 mM potassium phosphate pH 6.95, 250 mM potassium chloride and 10% isopropanol (v/v) on a sample of ConjA at 280 nm shows a monomer purity of over 99% with no impurity detected. UHPLC SEC analysis gives a concentration of final ConjA at 0.77 mg/mL in 3.2 mL, obtained mass of ConjA is 2.47 mg (71% yield).

15

20 **Example 3: In vivo ADC efficacy studies**

CB.17 SCID mice, aged 8-12 weeks, may be injected with 1 mm³ tumour fragments subcutaneously in the flank. When tumours reach an average size of 100 - 150 mg, treatment may be begun. Mice may be weighed twice a week. Tumour size may be measured twice a week. Animals may be monitored individually. The endpoint of the experiment is a tumour volume of 1000 mm³ or 60 days, whichever comes first. Responders can be followed longer.

25

Groups of 10 xenografted mice can be injected i.v. with 0.2ml of antibody drug conjugate (ADC), or naked antibody, in phosphate buffered saline (vehicle) or with 0.2ml of vehicle alone. The concentration of ADC can be adjusted to give, for example, 0.3 or 1.0 mg ADC/kg body weight in a single dose. Three identical doses may be given to each mouse at intervals of, for example, 1 week.

30

Example 4: In vitro ADC efficacy studies

Medium from subconfluent (about 80-90% confluency) SK-BR-3 cells in a T75 flask was aspirated and PBS (about 20ml) was added to rinse away the culture medium. The PBS was

35

aspirated and Trypsin-EDTA (5ml) added. The flask was returned to the 37°C gassed incubator for up to about 5 minutes. The flask was rapped sharply to dislodge and dissociate cells from the plastic. The cell suspension was transferred to a sterile 50ml screw-top centrifuge tube. Medium (McCoy's + 10% FCS) was added to a final volume of 15ml, then the tube was centrifuged (400g for 5 min). The supernatant was aspirated and the pellet re-suspended in 10ml culture medium. Repeated aspiration (up and down a 10ml pipette) may be necessary to break up cell clumps and produce monodisperse cell suspensions suitable for counting. Cell suspension (10µl) was mixed with Trypan blue (10µl) and live/dead cells counted with a haemocytometer to determine cell concentration and viability. The cell suspension was diluted to 20×10^4 /ml and 50µl was dispensed into clear 96 well flat bottomed plates. The cells were incubated overnight to allow recovery before use.

A stock solution (1ml) of antibody drug conjugate (ADC) (20µg/ml) was made by dilution of filter-sterilised ADC into cell culture medium. A set of 8x 10-fold dilutions of stock ADC was made in a 24 well plate by serial transfer of 100µl onto 900µl of cell culture medium.

50µl of each ADC dilution is dispensed into 4 replicate wells of the 96 well plate, containing 50µl cell suspension seeded the previous day. Control wells receive 50µl cell culture medium. The 96-well plate containing cells and ADCs was incubated at 37°C in a CO₂-gassed incubator for 4 days. At the end of the incubation period, viable cells were measured by MTS assay. MTS (Promega) was dispensed (20µl per well) into each well and incubated for 4 hours at 37°C in the CO₂-gassed incubator. Well absorbance was measured at 490nm. Percentage cell survival is calculated from the mean absorbance in the 4 ADC-treated wells compared to the mean absorbance in the 4 control wells (100%).

ADC	EC ₅₀ (µg/ml)
ConjA	0.00257

Abbreviations

	Ac	acetyl
	Acm	acetamidomethyl
	Alloc	allyloxycarbonyl
5	Boc	di- <i>tert</i> -butyl dicarbonate
	t-Bu	tert-butyl
	Bzl	benzyl, where Bzl-OMe is methoxybenzyl and Bzl-Me is methylbenzene
	Cbz or Z	benzyloxy-carbonyl, where Z-Cl and Z-Br are chloro- and bromobenzyloxy carbonyl respectively
10	DMF	<i>N,N</i> -dimethylformamide
	Dnp	dinitrophenyl
	DTT	dithiothreitol
	Fmoc	9 <i>H</i> -fluoren-9-ylmethoxycarbonyl
	imp	<i>N</i> -10 imine protecting group: 3-(2-methoxyethoxy)propanoate-Val-Ala-PAB
15	MC-OSu	maleimidocaproyl- <i>O</i> - <i>N</i> -succinimide
	Moc	methoxycarbonyl
	MP	maleimidopropanamide
	Mtr	4-methoxy-2,3,6-trimethylbenzenesulfonyl
	PAB	para-aminobenzyloxycarbonyl
20	PEG	ethyleneoxy
	PNZ	<i>p</i> -nitrobenzyl carbamate
	Psec	2-(phenylsulfonyl)ethoxycarbonyl
	TBDMS	tert-butyldimethylsilyl
	TBDPS	tert-butyldiphenylsilyl
25	Teoc	2-(trimethylsilyl)ethoxycarbonyl
	Tos	tosyl
	Troc	2,2,2-trichlorethoxycarbonyl chloride
	Trt	trityl
	Xan	xanthyl

Claims

1. A conjugate of formula (A):

5

and salts and solvates thereof, wherein:

D represents either group D1 or D2:

D1

D2

;

the dotted line indicates the optional presence of a double bond between C2 and C3;

- 10 when there is a double bond present between C2 and C3, R² is selected from the group consisting of:

(ia) C₅₋₁₀ aryl group, optionally substituted by one or more substituents selected from the group comprising: halo, nitro, cyano, ether, carboxy, ester, C₁₋₇ alkyl, C₃₋₇ heterocyclyl and bis-oxy-C₁₋₃ alkylene;

- 15 (ib) C₁₋₅ saturated aliphatic alkyl;

(ic) C₃₋₆ saturated cycloalkyl;

- (id) , wherein each of R³¹, R³² and R³³ are independently selected from H, C₁₋₃ saturated alkyl, C₂₋₃ alkenyl, C₂₋₃ alkynyl and cyclopropyl, where the total number of carbon atoms in the R² group is no more than 5;

(ie) , wherein one of R^{35a} and R^{35b} is H and the other is selected from: phenyl, which phenyl is optionally substituted by a group selected from halo, methyl, methoxy; pyridyl; and thiophenyl; and

(if) , where R^{34} is selected from: H; C_{1-3} saturated alkyl; C_{2-3} alkenyl; C_{2-3} alkynyl; cyclopropyl; phenyl, which phenyl is optionally substituted by a group selected from halo, methyl, methoxy; pyridyl; and thiophenyl;

(ig) halo;

when there is a single bond present between C2 and C3,

R^2 is , where R^{36a} and R^{36b} are independently selected from H, F, C_{1-4}

saturated alkyl, C_{2-3} alkenyl, which alkyl and alkenyl groups are optionally substituted by a group selected from C_{1-4} alkyl amido and C_{1-4} alkyl ester; or, when one of R^{16a} and R^{16b} is H, the other is selected from nitrile and a C_{1-4} alkyl ester;

R^6 and R^9 are independently selected from H, R, OH, OR, SH, SR, NH_2 , NHR, NRR' , NO_2 , $SnMe_3$ and halo;

either

(a) R^{10} is H, and R^{11} is OH or OR^A , where R^A is C_{1-4} alkyl; or

(b) R^{10} and R^{11} form a nitrogen-carbon double bond between the nitrogen and carbon atoms to which they are bound; or

(c) R^{10} is H and R^{11} is OSO_zM , where z is 2 or 3 and M is a monovalent

pharmaceutically acceptable cation; or

(d) R^{11} is OH or OR^A , where R^A is C_{1-4} alkyl and R^{10} is selected from:

10 Y is selected from formulae A1 and A2:

(A1)

(A2)

Z¹ is a C₁₋₃ alkylene group;

Z^2 is a C_{1-3} alkylene group;

Q is:

, where Q^X is such that Q is an amino-acid residue, a

dipeptide residue or a tripeptide residue;

5 L is a linker connected to a cell binding agent;

CBA is the cell binding agent;

n is an integer between 0 and 48;

R and R' are each independently selected from optionally substituted C_{1-12} alkyl,

C_{3-20} heterocyclyl and C_{5-20} aryl groups, and optionally in relation to the group NRR', R and

10 R' together with the nitrogen atom to which they are attached form an optionally substituted 4-, 5-, 6- or 7-membered heterocyclic ring;

R^8 is either:

(a) independently selected from H, R, OH, OR, SH, SR, NH_2 , NHR, NRR', NO_2 , $SnMe_3$ and halo; or

15 (b) of formula A*:

wherein:

D' represents either group D'1 or D2:

D'1

D'2

20 wherein the dotted line indicates the optional presence of a double bond between C2' and C3';

R^{17} is independently selected from H, R, OH, OR, SH, SR, NH_2 , NHR, NRR', NO_2 , $SnMe_3$ and halo;

R" is a C₃₋₁₂ alkylene group, which chain may be interrupted by one or more heteroatoms, e.g. O, S, N(H), NMe and/or aromatic rings, e.g. benzene or pyridine, which rings are optionally substituted; and

X and X' are independently selected from O, S and N(H); and

5 R²², R¹⁶, R¹⁹, R²⁰ and R²¹ are as defined for R², R⁶, R⁹, R¹⁰ and R¹¹ respectively.

2. The conjugate according to claim 1, wherein R⁹ is H.

3. The conjugate according to either claim 1 or claim 2, wherein R⁶ is H.

10

4. The conjugate according to any one of claims 1 to 3, wherein D is D2.

5. The conjugate according to any one of claims 1 to 3, wherein D is D1, there is a double bond between C2 and C3, and R² is a C₅₋₇ aryl group.

15

6. The conjugate according to claim 5, wherein R¹² is phenyl.

7. The conjugate according to any one of claims 1 to 3, wherein D is D1, there is a double bond between C2 and C3, and R² is a C₈₋₁₀ aryl group.

20

8. The conjugate according to any one of claims 5 to 7, wherein R¹² bears one to three substituent groups.

9. The conjugate according to any one of claims 5 to 8, wherein the substituents are selected from methoxy, ethoxy, fluoro, chloro, cyano, bis-oxy-methylene, methyl-piperazinyl, morpholino and methyl-thiophenyl.

25

10. The conjugate according to any one of claims 1 to 3, wherein D is D1, there is a double bond between C2 and C3, and R² is a C₁₋₅ saturated aliphatic alkyl group.

30

11. The conjugate according to claim 10, wherein R² is methyl, ethyl or propyl.

12. The conjugate according to any one of claims 1 to 3, wherein D is D1, there is a double bond between C2 and C3, and R² is a C₃₋₆ saturated cycloalkyl group.

35

13. The conjugate according to claim 12, wherein R² is cyclopropyl.

14. The conjugate according to any one of claims 1 to 3, wherein D is D1, there is a double bond between C2 and C3, and R^2 is a group of formula:

5

15. The conjugate according to claim 14, wherein the total number of carbon atoms in the R^2 group is no more than 4.

16. The conjugate according to claim 15, wherein the total number of carbon atoms in the R^2 group is no more than 3.

10

17. The conjugate according to any one of claims 14 to 16, wherein one of R^{31} , R^{32} and R^{33} is H, with the other two groups being selected from H, C_{1-3} saturated alkyl, C_{2-3} alkenyl, C_{2-3} alkynyl and cyclopropyl.

15

18. The conjugate according to any one of claims 14 to 16, wherein two of R^{31} , R^{32} and R^{33} are H, with the other group being selected from H, C_{1-3} saturated alkyl, C_{2-3} alkenyl, C_{2-3} alkynyl and cyclopropyl.

19. The conjugate according to any one of claims 1 to 3, wherein D is D1, there is a double bond between C2 and C3, and R^2 is a group of formula:

20

20. The conjugate according to claim 19, wherein R^{12} is the group:

25

21. The conjugate according to any one of claims 1 to 3, wherein D is D1, there is a double bond between C2 and C3, and R^2 is a group of formula:

22. The conjugate according to claim 21, wherein R^{34} is selected from H, methyl, ethyl, ethenyl and ethynyl.

5

23. The conjugate according to claim 22, wherein R^{34} is selected from H and methyl.

24. The conjugate according to any one of claims 1 to 3, wherein D is D1, there is a

double bond between C2 and C3, and R^2 is

10

25. The conjugate according to claim 24, wherein R^{36a} and R^{36b} are both H.

26. The conjugate according to claim 24, wherein R^{36a} and R^{36b} are both methyl.

15 27. The conjugate according to claim 24, wherein one of R^{36a} and R^{36b} is H, and the other is selected from C_{1-4} saturated alkyl, C_{2-3} alkenyl, which alkyl and alkenyl groups are optionally substituted.

20 28. The conjugate according to claim 24, wherein the group of R^{36a} and R^{36b} which is not H is selected from methyl and ethyl.

29. The conjugate according to any one of claims 1 to 28, wherein R^{10} is H, and R^{11} is OH.

25 30. The conjugate according to any one of claims 1 to 28, wherein R^{10} and R^{11} form a nitrogen-carbon double bond between the nitrogen and carbon atoms to which they are bound.

30 31. The conjugate according to any one of claims 1 to 28, wherein R^{11} is OH or OR^A and R^{10} is selected from:

R ^{10a}	
R ^{10b}	
R ^{10c}	
R ^{10d}	
R ^{10e}	
R ^{10f}	

32. The conjugate according to any one of claims 1 to 31, wherein
 $-C(=O)-X_1-NHC(=O)X_2-NH-$, is selected from: -Phe-Lys-, -Val-Ala-, -Val-Lys-, -Ala-Lys-, and -
 Val-Cit-.

5

33. The conjugate according to claim 32, wherein $-C(=O)-X_1-NHC(=O)X_2-NH-$, is
 selected from: -Phe-Lys-, and -Val-Ala-.

34. The conjugate according to any one of claims 31 to 33, wherein R^{11} is OMe.

10

35. The conjugate according to any one of claims 1 to 34, wherein R^8 is OR^{8A} , where R^{8A}
 is optionally substituted C_{1-4} alkyl.

36. The conjugate of claim 35, wherein R^{8A} is Me.

15

37. The conjugate according to any one of claims 1 to 34, wherein R^8 is of formula A^* .

38. The conjugate according to claim 37, wherein X and X' are O.

20 39. The conjugate according to either claim 37 or claim 38, wherein R'' is C_{3-7} alkylene.

40. The conjugate according to claim 39, wherein R'' is C_3 alkylene or C_5 alkylene.

41. The conjugate according to any one of claims 37 to 40, wherein R^{17} is OR^{17A} , where R^{17A} is optionally substituted C_{1-4} alkyl.

5 42. The conjugate of claim 41, wherein R^{17A} is Me.

43. The conjugate according to any one of claims 37 to 42, wherein R^{16} , R^{19} , R^{20} , R^{21} and D' are the same as R^6 , R^9 , R^{10} , R^{11} and D respectively.

10 44. The conjugate according to any one of claims 1 to 43, wherein the group L contains a moiety derived from an electrophilic functional group selected from (i) maleimide groups (ii) activated disulfides, (iii) active esters such as NHS (N-hydroxysuccinimide) esters, HOBt (N-hydroxybenzotriazole) esters, haloformates, and acid halides; (iv) alkyl and benzyl halides such as haloacetamides; and (v) aldehydes, ketones, carboxyl.

15

45. The conjugate according to any one of claims 1 to 43, wherein L is of formula:

where m is from 0 to 6; and

L^A is selected from:

(L^{A1-1})		(L^{A6})	
(L^{A1-2})		(L^{A7})	
(L^{A2})		(L^{A8-1})	
(L^{A3-1})		(L^{A8-2})	

(L ^{A3-2})		(L ^{A9-1})	
(L ^{A4})		(L ^{A9-2})	
(L ^{A5})			

where Ar represents a C₅₋₆ arylene group.

46. The conjugate of claim 45, wherein L^A is L^{A1}.

5 47. The conjugate according to either claim 45 or claim 46, wherein m is 3 or 5.

48. The conjugate according to any one of claims 1 to 47, wherein n is an integer between 0 and 16.

10 49. The conjugate according to any one of claims 1 to 48, wherein n is an integer between 0 and 8.

50. The conjugate according to any one of claims 1 to 49, wherein n is 3 or 4.

15 51. The conjugate according to any one of claims 1 to 50, wherein Q is selected from:

NH₂-Phe-Lys-C(=O),

NH₂-Val-Ala-C(=O),

NH₂-Val-Lys-C(=O),

NH₂-Ala-Lys-C(=O),

20 NH₂-Val-Cit-C(=O),

NH₂-Phe-Cit-C(=O),

NH₂-Leu-Cit-C(=O),

NH₂-Ile-Cit-C(=O),

NH₂-Phe-Arg-C(=O), and

25 NH₂-Trp-Cit-C(=O);

where Cit is citrulline.

52. The conjugate according to claim 51, wherein Q is selected from:

NH-Phe-Lys-C=O ,

NH-Val-Ala-C=O ,

5 NH-Val-Lys-C=O ,

NH-Ala-Lys-C=O , and

NH-Val-Cit-C=O .

53. The conjugate according to claim 52, wherein Q is selected from NH-Phe-Lys-C=O ,

10 NH-Val-Cit-C=O or NH-Val-Ala-C=O .

54. The conjugate according to any one of claims 1 to 53, wherein the cell binding agent is an antibody or an active fragment thereof.

15 55. The conjugate according to claim 54, wherein the antibody or antibody fragment is an antibody or antibody fragment for a tumour-associated antigen.

56. The conjugate of claim 55 wherein the antibody or antibody fragment is an antibody which binds to one or more tumor-associated antigens or cell-surface receptors

(87) Annexin A1 – ANXA1;

5 (88) V-CAM (CD106) - VCAM1.

57. The conjugate of claim 54 wherein the antibody or antibody fragment is a cysteine-engineered antibody.

10 58. The conjugate according to any one of claims 54 to 57 wherein the drug loading (p) of drugs (D) to antibody (Ab) is an integer from 1 to about 8.

59. The conjugate according to claim 58, wherein p is 1, 2, 3, or 4.

15 60. The conjugate according to claim 59 comprising a mixture of the antibody-drug conjugate compounds, wherein the average drug loading per antibody in the mixture of antibody-drug conjugate compounds is about 2 to about 5.

61. The conjugate according to any one of claims 1 to 60, for use in therapy.

20

62. A pharmaceutical composition comprising the conjugate of any one of claims 1 to 60 a pharmaceutically acceptable diluent, carrier or excipient.

25 63. The conjugate according to any one of claims 1 to 60 or the pharmaceutical composition according to claim 62, for use in the treatment of a proliferative disease in a subject.

64. The conjugate according to claim 63, wherein the disease is cancer.

30 65. Use of a conjugate according to any one of claims 1 to 60 or a pharmaceutical composition according to claim 62 in a method of medical treatment.

66. A method of medical treatment comprising administering to a patient the pharmaceutical composition of claim 62.

35

67. The method of claim 66 wherein the method of medical treatment is for treating

cancer.

68. The method of claim 67, wherein the patient is administered a chemotherapeutic agent, in combination with the conjugate.

5

69. Use of a compound according to any one of claims 1 to 60 in a method of manufacture of a medicament for the treatment of a proliferative disease.

70. A method of treating a mammal having a proliferative disease, comprising administering an effective amount of a compound according to any one of claims 1 to 60 or a pharmaceutical composition according to claim 62.

10

71. A compound of formula (B):

15 wherein:

Y^L is selected from formulae B1 and B2:

(B1)

(B2)

G is a linker for connecting to a cell binding agent; and

D, R⁶, R⁸, R⁹, R¹⁰, R¹¹, Z¹ and Z², Q and n are as defined in any one of claims 1 to 53.

72. The compound according to claim 71, wherein the group G contains an electrophilic group selected from (i) maleimide groups (ii) activated disulfides, (iii) active esters such as NHS (N-hydroxysuccinimide) esters, HOBt (N-hydroxybenzotriazole) esters, haloformates, and acid halides; (iv) alkyl and benzyl halides such as haloacetamides; and (v) aldehydes, ketones, carboxyl.

73. The compound according to claim 72, wherein G is of formula:

where m is from 0 to 6; and

G^A is selected from:

(G ^{A1-1})		(G ^{A4})	 Where Hal = I, Br, Cl
(G ^{A1-2})		(G ^{A5})	
(G ^{A2})		(G ^{A6})	
(G ^{A3-1})	 where the NO ₂ group is optional	(G ^{A7})	

(G ^{A3-2})	 <p>where the NO₂ group is optional</p>	(G ^{A8})	
(G ^{A3-3})	 <p>where the NO₂ group is optional</p>	(G ^{A9})	
(G ^{A3-4})	 <p>where the NO₂ group is optional</p>		

where Ar represents a C₅₋₆ arylene group.

74. The compound of claim 73, wherein G^A is G^{A1}.

5 75. A compound of formula (C):

wherein Y^C is selected from formulae C1 and C2:

199

(C2)

and

D, R⁶, R⁸, R⁹, R¹⁰, R¹¹, Z¹ and Z² are as defined in any one of claims 1 to 50.

76. A method of synthesis of a compound according to any one of claims 1 to 60,
5 comprising the step of conjugating a drug-linker according to any one of claims 71 to 74 with
a cell-binding agent.

INTERNATIONAL SEARCH REPORT

International application No
PCT/EP2014/069248

A. CLASSIFICATION OF SUBJECT MATTER
INV. A61K47/48 C07D487/04 A61P35/00
ADD.

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
A61K C07D

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)

EPO-Internal, WPI Data

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X	WO 2014/057115 A1 (ADC THERAPEUTICS S RL [CH]) 17 April 2014 (2014-04-17) claim 100 examples 1-13 ----- -/--	1-76

Further documents are listed in the continuation of Box C.

See patent family annex.

* Special categories of cited documents :

"A" document defining the general state of the art which is not considered to be of particular relevance

"E" earlier application or patent but published on or after the international filing date

"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"O" document referring to an oral disclosure, use, exhibition or other means

"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art

"&" document member of the same patent family
