54 **Infant transitional sensory system.**

57 The infant transitional sensory system provides a hammock (2) which may be supported in any of various positions from a deep pocket to a relatively flat or spread position to receive an infant thereon. It includes a sonic device (10) that may be received on and attached to the sheet (2) for generating audible and vibrational impulses simulating the human heart beat. The sheet (2) preferably is of a soft, textured, flexible material, the system providing an enriched environment and substantial tactile kinesthetic stimulation for the newborn to stimulate the normal, full development of the child's primary sensory systems in a uniquely effective, simple fashion.
