(54) **Title:** METHOD FOR SIGNALLING HYBRID AUTOMATIC REPEAT REQUEST (HARQ) CONFIGURATION

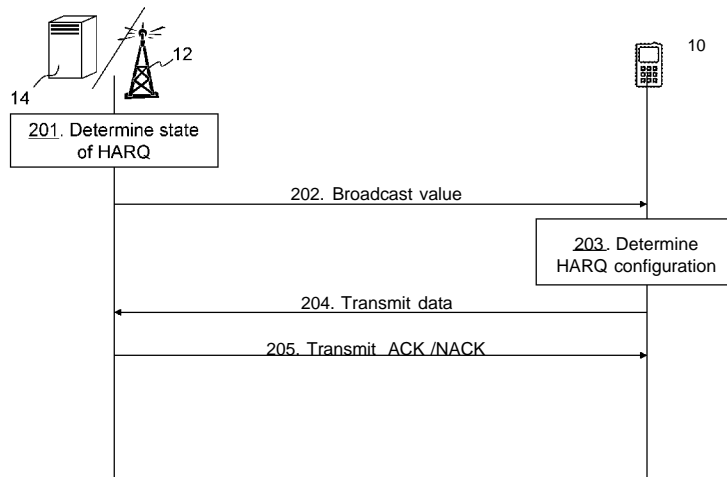

Fig. 2

(57) **Abstract:** Embodiments herein relate to a method in a network node (12, 14) for signalling Hybrid Automatic Repeat Request, HARQ, configuration for a common enhanced dedicated channel configuration in a radio communications network (1). The network node (12, 14) is comprised in the radio communications network (1) and serves a user equipment (10). The network node (12, 14) determines a state of a HARQ process of a transmission time interval out of a number of HARQ processes for a common enhanced dedicated channel configuration. The state is defining whether the HARQ process is active or inactive. The network node (12, 14) signals the HARQ configuration for the common enhanced dedicated channel configuration by broadcasting a value representing the state of the HARQ process.
