(54) Title: PEER-TO-PEER DYNAMIC WEB PAGE SHARING

(57) Abstract: According to a particular embodiment of the present invention, a communication system includes a first browser operable to submit requests for one or more web pages and a request to share the one or more requested web pages with another browser, the request to share specifying the other browser. The communication system also includes a web media server operable, in response to the request to share, to: (1) establish a communication session with the first browser; (2) establish a media session and a signaling session with a remote web media server, the remote web media server being associated with the other browser that the first browser specified in the request to share, the signaling session including a standard signaling protocol; (3) receive web page information from the first browser; and (4) communicate shared web page information to the remote web media server using the media session.
