UNITED STATES PATENT OFFICE

HENRY F. GOULET, OF WALPOLE, MASSACHUSETTS

DISPLAY ARRANGEMENT

Application filed June 18, 1927. Serial No. 199,777.

The present invention is directed to improvements in card holders for display stands.

The primary object of the invention is to provide a device of this character so constructed that a number of boxes containing vegetables can be easily placed upon the stands to display the contents of the boxes, provision being made for holding cards bearing a description of the contents of the individual boxes.

Another object of the invention is to provide a device of this type which is exceedingly simple in construction and one which can be manufactured at a very small cost.

In the accompanying drawing:

Figure 1 is a perspective view of the stand.

Figure 2 is a transverse sectional view therethrough.

Figure 3 is a transverse sectional view through one of the boxes showing more clearly the manner in which the cards descriptive of the contents of the boxes can be secured.

The stand comprises a pair of end frames 1 which consist of single lengths of angle iron, so bent as to provide rear bars 2, and downwardly and forwardly inclined bars 3 integrally connected at their upper ends by top bars 4.

Having their ends suitably secured to the top bars 4 are spaced longitudinal bars 5—5, also formed from angle iron, the vertical webs 6—6 thereof constituting abutments for the front and rear sides of the vegetable containing boxes 7—7.

Connecting the front and rear bars 3 and 2 are side bars 8—8, also formed from angle iron, said bars having secured thereto the horizontal webs 9—9 of the longitudinal angle iron bars 10—10, two of which are supported by each pair of the bars 8—8. The vertical webs 11—11 of the bars 10—10 serve as abutments for the boxes 12—12. It will be observed upon reference to Figure 2 that the bars 10—10 of each pair are offset in order that the lowermost box 12 will be arranged in advance of the uppermost box, thus prominently displaying the contents of the respective boxes. The boxes 7 and 12 have removable metallic frames 13 and 14, respectively, the front bars thereof being adapted to receive thereunder the upper edge of the cards 15, the lower edges of said cards being engaged between the lower portions of the respective boxes and the webs 6 and 11 of the front bars 5 and 10, respectively, as more clearly shown in Figure 3. In this manner cards bearing a description of the contents of the individual boxes can be conveniently secured in place or interchanged when desired.

The side frames 1 have secured thereto sheet metal panels 16 upon which may be printed matter which will call attention to the contents of the display stand.

The lower ends of the bars 2 and 3 are provided with casters 17 in order that the stand may be rolled from place to place.

Having thus described the invention, I claim:

A device of the class described, comprising a stand including a cross bar, a box supported in said stand, a removable cover frame for the box, and a display card engaging the front face of the box, the lower portion of the card being engaged between the bar and box face, the upper portion of the card being engaged between the cover frame and box.

In testimony whereof I affix my signature.

HENRY F. GOULET. [L. S.]
