UNITED STATES PATENT OFFICE.

EMORY C. HISCOCK, OF DETROIT, MICHIGAN.

DESIGN FOR A BRACKET.

SPECIFICATION forming part of Design No. 22,586, dated July 4, 1893.
Application filed June 5, 1893. Serial No. 476,677. Term of patent 7 years.

To all whom it may concern:

Be it known that I, EMORY C. HISCOCK, a citizen of the United States, residing at Detroit, in the county of Wayne and State of Michigan, have invented and produced a new and original Design for a Bracket, of which the following is a specification, reference being had therein to the accompanying drawings.

Figure 1 is a front elevation of a bracket showing my design. Fig. 2 is a top plan view thereof.

The leading feature of my design consists in the graceful configuration of the securing plate with the centrally arranged connecting shelves.

A is the securing plate which tapers in curved lines upwardly and downwardly of its central point.

B and C are two semi-circular shelves, the upper one being smaller than the lower one, concentrically arranged, connected together by the tapering fingers or arms D. The upper edge of the plate C is provided with scallops E and the upper edge of the plate B with beads F which are formed by extensions of the fingers D.

G is a quarter spherical ornament, connecting the securing plates centrally to the upper shelf. The inner edge of the lower shelf is scalloped as shown at H.

What I claim as my invention is—

The design for a bracket, herein shown and described.

In testimony whereof I affix my signature in presence of two witnesses.

EMORY C. HISCOCK.

Witnesses:

M. B. O'DOGHERTY,

OTTO F. BARTHEL.
