(54) **Suction nozzle for vacuum cleaner**

(57) A brush head (10) of a vacuum cleaner can pivot in a horizontal direction as well as a vertical direction with respect to a suction pipe (20), so as to easily clean an area narrower than the width of the brush head (10). The brush head (10) of a vacuum cleaner includes a body (11) which is detachably coupled to a suction pipe (20) and is formed with a suction hole (12) for sucking dust. A hollow cylindrical pivoting part (13) is integrally formed with the body (11) at a rear central portion of the body (11) and is formed with a roller receiving cut (15) along a periphery of the lower surface of the pivoting part (13). A cylindrical pivot supporting member (31) is inserted into the pivoting part (13) to support a horizontal pivoting

movement of the pivoting part (13). The pivot supporting member (31) is formed with a communicating space (36) at its peripheral wall which communicates with the suction hole (12) and the suction pipe (20), and is provided with a roller (34) at its rear bottom surface. And, a pair of elastic bands (32a,32b) are mounted to support the connection between the pivoting part (13) and the pivot supporting member (31). One end of each elastic band (32a,32b) is caught on the pivot supporting member (31) and the other end of each elastic band (32a,32b) is caught on the body (11). The elastic bands (32a,32b) are disposed symmetrically on both sides of the body (11).

ANNEX TO THE EUROPEAN SEARCH REPORT  
ON EUROPEAN PATENT APPLICATION NO.

EP 08 15 1458

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.  
The members are as contained in the European Patent Office EDP file on  
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
