54 **A mounting for a roller blind.**

57 A roller blind is carried on a tubular element (12) fitted at each end into a socket defined by a cup-shape body (1) having a foot (2) for securing it to a fixed support. The cup-shape body (1) is provided with an aperture (5) partly spanned by a projecting tongue (7) with an enlarged head end (7') which engages into an aperture (13) in the end of the tubular body (12) when this is fitted into the cup shaped body (1) and turned in to register with the projection (7).
