UNITED STATES PATENT OFFICE.

FRANK E. MOONEY, OF LOGANSPORT, INDIANA.

CORN-CUTTER PROTECTOR.

1,117,077. Specification of Letters Patent. Patented Nov. 10, 1914.

Application filed December 23, 1912. Serial No. 738,247.

To all whom it may concern:

Be it known that I, FRANK E. MOONEY, a citizen of the United States, residing at Logansport, in the county of Cass and State of Indiana, have invented certain new and useful Improvements in Corn-Cutter Protectors, of which the following is a specification, reference being had therein to the accompanying drawing.

This invention provides protection for the hand, arm, shoulder, and neck of a person engaged in cutting corn and the like.

The details of the device will be apparent from the accompanying drawing, forming part hereof, when read in connection with the description, the drawing showing a preferable embodiment of the invention.

Like reference-characters refer to corresponding parts in the views of the drawing, of which—

Figure 1 is a view of the device in place on the person of a user; and Fig. 2 is a view showing the collar open and the glove separated from the sleeve.

Having more particular reference to the drawing, 3 designates a sleeve, having permanently connected at its top a shoulder covering 4, to which latter is permanently connected a collar 5 arranged to encircle the neck of a user and to be held in place by fasteners 6 the members of which are positioned in the meeting or lapping portions of the collar, as shown. The lower end of the sleeve terminates in a cuff 7, to which is connected a glove 8, the glove being connected to the cuff by separable fasteners 9 or by buttons or the like, so that the glove may be removed easily without removing the sleeve. The cuff laps the glove, that is, the upper or wrist portion of the glove is inside of the cuff.

It will be seen that this device constitutes a covering for the hand, arm, shoulder, and neck of a user. The device is made of strong and tough textile or other suitable material that cannot be penetrated easily by a corn-knife or the like, so that when such an instrument accidentally comes into contact with a covered part injury thereto will be prevented.

Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is—

A protector of the class described, comprising a sleeve, having a cuff portion, and having permanently connected thereto at its top a shoulder covering, and a collar permanently connected to said covering, means on the collar to maintain it in place around the neck of a user, and a glove detachably connected to said cuff.

In testimony whereof I affix my signature in presence of two witnesses.

FRANK E. MOONEY.
