Title: NON-Steroidal LIGANDS FOR THE GLUCOCORTICOID RECEPTOR, COMPOSITIONS AND USES THEREOF

Abstract: The invention provides non-steroidal ligands for the glucocorticoid receptor, methods for making non-steroidal ligands of the glucocorticoid receptor, and methods of using non-steroidal ligands and compositions of non-steroidal ligands of the glucocorticoid receptor in treating or preventing diseases (e.g., obesity, diabetes, depression, neurodegeneration of an inflammatory disease) associated with glucocorticoid binding to the glucocorticoid receptor.
NON-STEROIDAL LIGANDS FOR THE GLUCOCORTICOID RECEPTOR,
COMPOSITIONS AND USES THEREOF

This application claims priority to provisional application Serial No. 60/351,484 and provisional application Serial No. 60/373,757, both of which are incorporated herein by reference in their entirety.

FIELD OF THE INVENTION

BACKGROUND OF THE INVENTION

The glucocorticoid receptor is a member of the steroid/thyroid hormone receptor superfamily, which includes, but is not limited to, mineralocorticoid, androgen, progestosterone and estrogen receptors. The glucocorticoid receptor is activated \textit{in vivo} by binding of natural agonists such as cortisol and corticosterone.

The glucocorticoid receptor may also be activated by binding of synthetic agonists such as dexamethasone, prednisone and prednisolone. Many synthetic antagonists of glucocorticoid receptors (e.g., RU-486) are also known.

Since the presence or absence of ligand binding to the glucocorticoid receptor may have profound physiological consequences \textit{e.g.}, lead to Cushing’s syndrome or Addison’s disease, drugs that target the glucocorticoid receptor are clinically relevant. Consequently, selective glucocorticoid receptor ligands that either activate \textit{i.e.}, agonists) or inactivate \textit{i.e., antagonists) glucocorticoid mediated response are compounds of pharmaceutical interest.

The glucocorticoid receptor, when activated by ligand, mediates biological processes \textit{e.g.,}, metabolism, electrolyte balance, organ and tissue systems, \textit{etc.) by binding to specific regulatory DNA sequences \textit{i.e., response elements) in the promoter of cortisol-regulated genes. The glucocorticoid receptor may thus activate or repress transcription of cortisol-regulated genes. At least three different response
elements exist for glucocorticoid receptor regulation: (1) the glucocorticoid response element (GRE); (2) an AP-1/GRE; and (3) a NFκB/GRE. Agonist binding to the glucocorticoid receptor leads to transcriptional activation of the GRE and transcriptional repression of AP-1/GRE and NFκB/GRE. Currently available drugs that bind to the glucocorticoid receptor are typically cortisol analogues, which produce undesired side effects that are caused by: (1) unselective binding to other steroid receptors; and (2) failure to dissociate the different response elements when binding to the glucocorticoid receptor. Thus, there exists a need for compounds that selectively bind to the glucocorticoid receptor and selectively dissociate the different response elements of the glucocorticoid receptor.

The discussion of the background to the invention herein is included to explain the context of the invention. This is not to be taken as an admission that any of the material referred to was published, known or part of the common general knowledge as at the priority date of any of the claims.

Throughout the description and claims of the specification the word “comprise” and variations of the word, such as “comprising” and “comprises”, is not intended to exclude other additives, components, integers or steps.

SUMMARY OF THE INVENTION

The present invention addresses these and other needs by providing non-steroidal ligands for the glucocorticoid receptor, methods for making non-steroidal ligands of the glucocorticoid receptor, compositions of non-steroidal ligands of the glucocorticoid receptor and methods of using non-steroidal ligands and compositions of non-steroidal ligands of the glucocorticoid receptor for treating or preventing diseases (e.g., obesity, diabetes, depression, neurodegeneration or an inflammatory disease) associated with glucocorticoid binding to the glucocorticoid receptor. In principle, the current invention allows for the preparation of either agonist or antagonist compounds and either or both of these pharmacological modes of action may be useful for certain therapeutic treatments.

The compounds of the instant invention include a carbocyclic ring system, which may be unsaturated and may be annelated with a heterocyclic ring. In particular, the carbocyclic ring systems may be an indan (i.e., a six membered carbocyclic ring fused with a five membered carbocyclic ring), a dehydro-decalin (i.e., a six membered
carbocyclic ring fused with a six membered carbocyclic ring) or a dehydro [4.5.0] bicyclo undecane (i.e., a six membered carbocyclic ring fused with a seven membered carbocyclic ring) ring system. When the carbocyclic ring system comprises a carbocyclic ring system annelated with a heterocyclic ring, the heterocyclic ring is typically attached to the six membered ring fragment - say of an indan or a dehydro-decalin - and has at least one oxygen, nitrogen or sulfur atom.

In a first aspect, the present invention provides compounds of formula (I):
or a pharmaceutically available salt, solvate or hydrate thereof wherein:

A, B and C are independently carbon, nitrogen, oxygen or sulfur provided that
at least one of A, B and C is nitrogen, oxygen or sulfur and that no more than one of
A, B and C are oxygen or sulfur;

W is carbon, oxygen, nitrogen, or sulfur and, when W is other than carbon and
nitrogen, one or more of R₆, R₇ and R₈ is absent so that a normal valence on W is
maintained;

R₁ is hydrogen, alkyl, substituted alkyl, acyl, substituted acyl, acylamino,
substituted acylamino, amino, alkylamino, substituted alkylamino, dialkylamino,
substituted dialkylamino, alkoxy carbonyl, substituted alkoxy carbonyl, arylalkyl,
substituted arylalkyl, aryl oxy carbonyl, substituted aryl oxy carbonyl, carbamoyl,
substituted carbamoyl, carboxy, cyano, halo, hetero alkyl or substituted hetero alkyl,
hetero aryl alkyl or substituted hetero aryl alkyl;

R₂, R₃, R₅, R₆, R₇, R₈, R₉, and R₁₀ are independently hydrogen, alkyl, substituted alkyl,
acyl, substituted acyl, acylamino, substituted acylamino, alkoxy, substituted alkoxy,
amino, alkylamino, substituted alkylamino, dialkylamino, substituted dialkylamino,
alkyl sulfanyl, substituted alkyl sulfanyl, alkyl thi sulfanyl, substituted alkyl thi sulfanyl,
alkyl thio, substituted alkyl thio, aryl oxy carbonyl, substituted aryl oxy carbonyl, aryl alkyl,
substituted aryl alkyl, aryl oxy carbonyl, substituted aryl oxy carbonyl, carbamoyl,
substituted carbamoyl, carboxy, cyano, halo, hetero alkyl, substituted hetero alkyl,
hetero aryl alkyl, substituted hetero aryl alkyl or hydroxy;

R₁₀′, R₁₁′, R₁₂′ and R₁₃ are absent or are independently hydrogen, alkyl,
substituted alkyl, acyl, substituted acyl, acylamino, substituted acylamino, alkoxy,
substituted alkoxy, amino, alkylamino, substituted alkylamino, dialkylamino,
substituted dialkylamino, alkyl sulfanyl, substituted alkyl sulfanyl, alkyl thi sulfanyl,
substituted alkyl thi sulfanyl, alkyl thio, substituted alkyl thio, alkoxy carbonyl, substituted alkoxy carbonyl, aryl alkyl,
alkoxy carbonyl, arylalkyl, substituted arylalkyl, aryloxy carbonyl, substituted aryloxy carbonyl, carbamoyl, substituted carbamoyl, carboxy, cyano, halo, heteroalkyl, substituted heteroalkyl, heteroarylalkyl, substituted heteroarylalkyl or hydroxy:

\( R_4 \) is absent or is hydrogen, alkyl, substituted alkyl, acyl, substituted acyl, acylamino, substituted acylamino, amino, alkylamino, substituted alkylamino, dialkylamino, substituted dialkylamino, alkoxy carbonyl, substituted alkoxy carbonyl, arylalkyl, substituted arylalkyl, aryloxy carbonyl, substituted aryloxy carbonyl, carbamoyl, substituted carbamoyl, carboxy, cyano, halo, heteroalkyl, substituted heteroalkyl, heteroarylalkyl, substituted heteroarylalkyl;

\( R_5 \) is hydrogen, alkyl, substituted alkyl, alkoxy, substituted alkoxy, amino, alkylamino, substituted alkylamino, dialkylamino, substituted dialkylamino, carboxy, cyano, halo, oxo, thio, hydroxy or is absent;

\( R_{10} \) is hydrogen, alkyl, substituted alkyl, acyl, substituted acyl, alkoxy carbonyl, substituted alkoxy carbonyl, aryl, substituted aryl, arylalkyl, substituted arylalkyl, arylloxy carbonyl, substituted aryloxy carbonyl, cycloalkyl, substituted cycloalkyl, cyclohexylalkyl, substituted cyclohexylalkyl, heteroalkyl, substituted heteroalkyl, heteroarylalkyl, substituted heteroarylalkyl or is absent;

\( R_{10} \) and \( R_5 \) may bond directly to one another to form a ring, and an additional ring such as a benzene ring, which may itself be substituted with an alkyl, alkoxy, halo, alkyl, substituted alkyl, acyl, substituted acyl, cycloalkyl, or substituted cycloalkyl, may fuse to the bond between \( R_{10} \) and \( R_5 \) and \( R_{12} \) and \( R_{13} \) are independently hydrogen, alkyl, substituted alkyl, acyl, substituted acyl, acylamino, substituted acylamino, alkoxy, substituted alkoxy, amino, alkylamino, substituted alkylamino, dialkylamino, substituted dialkylamino, alkylsulfonyl, substituted alkylsulfonyl, alkylsulfanyl, substituted alkylsulfanyl, alkythio, substituted alkythio, alkoxy carbonyl, substituted alkoxy carbonyl, aryl, substituted aryl, arylalkyl, substituted arylalkyl, aryloxy carbonyl, substituted aryloxy carbonyl, carboxy, cyano, halo, oxo, thio, heteroalkyl, substituted heteroalkyl, heteroaryl, substituted heteroaryl, heteroarylalkyl, substituted heteroarylalkyl or hydroxy.

The bonds in formula (I) that are shown with single and dashed lines are intended to represent alternative forms of the structure. That is, one or more, but
preferably one, such bonds may be a double bond provided that normal valences of the atoms in the rings are satisfied.

In a second aspect, the present invention provides compositions of compounds of the invention. The compositions generally comprise one or more compounds of the invention, pharmaceutically acceptable salts, hydrates or solvates thereof and a pharmaceutically acceptable diluent, carrier, excipient and adjuvant. The choice of diluent, carrier, excipient and adjuvant will depend upon, among other factors, the desired mode of administration.

In a third aspect, the present invention provides methods for treating or preventing obesity, diabetes, depression, neurodegeneration or an inflammatory disease. The methods generally involve administering to a patient in need of such treatment or prevention a therapeutically effective amount of a compound and/or composition of the invention.

In a fourth aspect, the present invention provides compositions for treating or preventing obesity, diabetes, depression, neurodegeneration or an inflammatory disease in a patient in need of such treatment or prevention.

In a fifth aspect the present invention provides methods for selectively modulating the activation, repression, agonism and antagonism effects of the glucocorticoid receptor in a patient. The methods generally involve administering to a patient in need of such treatment a therapeutically effective amount of a compound or composition of the invention.

BRIEF DESCRIPTION OF THE DRAWINGS

FIG. 1 shows synthesis Scheme 1, for a preferred synthetic route to a ketone intermediate used for synthesis of the compounds of structural formula (I).

FIG. 2 shows synthesis Scheme 2 for derivatizing an intermediate shown in Scheme 1.

FIG. 3 shows synthesis Scheme 3 for derivatizing a compound shown in Scheme 2.

FIG. 4 shows synthesis Scheme 4 for derivatizing a compound shown in Scheme 2.

FIG. 5 shows synthesis Scheme 5 for derivatizing a number of ketone moieties.
FIG. 6 shows synthesis Scheme 6 for synthesizing compounds of the present invention.

FIG. 7 shows synthesis Scheme 7 for synthesizing compounds of the present invention.

DETAILED DESCRIPTION OF THE INVENTION

Definitions
“Compounds of the invention” refers to compounds encompassed by structural formulas (I) disclosed herein and includes any specific compounds within that formula whose structure is disclosed herein. The compounds of the invention may be identified either by chemical structure and/or chemical name. When the chemical structure and chemical name conflict, the chemical structure is determinative of the identity of the compound. The compounds of the invention may contain one or more chiral centers and/or double bonds and therefore, may exist as stereoisomers, such as double-bond isomers (i.e., geometric isomers), enantiomers or diastereomers. Accordingly, the chemical structures depicted herein encompass all possible enantiomers and stereoisomers of the illustrated compounds including the stereoisomerically pure form (e.g., geometrically pure, enantiomerically pure or diastereomerically pure), and enantiomeric and stereoisomeric mixtures.

Enantiomeric and stereoisomeric mixtures can be resolved into their component enantiomers or stereoisomers using separation techniques or chiral synthesis techniques well known to an artisan of ordinary skill. The compounds of the invention may also exist in several tautomeric forms including the enol form, the keto form and mixtures thereof. Accordingly, the chemical structures depicted herein encompass all possible tautomeric forms of the illustrated compounds.

The compounds of the invention also include isotopically labeled compounds where one or more atoms have an atomic mass different from the most abundant atomic mass normally found in nature for given atom. Examples of isotopes that may be incorporated into the compounds of the invention include, but are not limited to, $^1$H, $^2$H, $^{13}$C, $^{14}$C, $^{15}$N, $^{16}$O, $^{17}$O, $^{18}$F, $^{25}$P, $^{32}$P, $^{35}$S, $^{37}$S and $^{39}$Cl.

Furthermore, it should be understood that, when partial structures of the compounds of the invention or precursors thereto are illustrated, brackets of dashes indicate the point of attachment of the partial structure to the rest of the molecule.

-9-
“Alkyl” refers to a saturated or unsaturated, branched, straight-chain or cyclic monovalent hydrocarbon radical derived by the removal of one hydrogen atom from a single carbon atom of a parent alkane, alkene or alkyne. Typical alkyl groups include, but are not limited to, methyl, ethyl, isobutyl, isopropyl, cyclopropyl, cyclohexyl, cyclopentyl, cyclohexyl, cyclooctyl, etc.; but also such as ethyl, isopropyl, cyclopropyl, cyclohexyl, cyclopentyl, cyclohexyl, cyclooctyl, etc.; butyl, isobutyl, isopropyl, cyclopropyl, cyclohexyl, cyclopentyl, cyclohexyl, cyclooctyl, etc.; and the like.

The term “alkyl” is specifically intended to include radicals having any degree or level of saturation, i.e., groups having exclusively carbon-carbon single bonds, groups having one or more carbon-carbon double bonds, groups having one or more carbon-carbon triple bonds and groups having mixtures of single, double and triple carbon-carbon bonds. Where a specific level of saturation is intended, the expressions “alkanyl”, “alkenyl”, and “alkynyl” are used. Preferably, an alkyl group comprises from 1 to 20 carbon atoms, more preferably from 1 to 10 carbon atoms or still more preferably from 1 to 6 carbon atoms.

“Alkanyl” refers to a saturated branched, straight-chain or cyclic alkyl radical derived by the removal of one hydrogen atom from a single carbon atom of a parent alkane. Typical alkanyl groups include, but are not limited to, methyl; ethyl; propenyls such as prop-1-enyl, prop-2-enyl, prop-2-en-2-ynyl (allyl), prop-2-en-2-en-2-ynyl, prop-2-en-2-en-2-en-2-ynyl, etc.; butenyls such as but-1-enyl, but-2-enyl, but-2-en-2-en-2-ynyl, but-2-en-2-en-2-en-2-en-2-ynyl, etc.; and the like.

“Alkenyl” refers to an unsaturated branched, straight-chain or cyclic alkyl radical having at least one carbon-carbon double bond, derived by the removal of one hydrogen atom from a single carbon atom of a parent alkene. The various groups attached to the double bond(s) may be in either the cis or trans (or E, or Z) form about the double bond(s). Typical alkynyl groups include, but are not limited to, ethynyl; propynyls such as prop-1-en-2-ynyl, prop-1-en-2-ynyl, prop-2-en-2-ynyl, prop-2-en-2-ynyl (allyl), prop-2-en-2-en-2-ynyl, prop-2-en-2-en-2-en-2-ynyl, etc.; butynyls such as but-1-en-2-ynyl, but-1-en-2-en-2-ynyl, but-1-en-2-en-2-en-2-ynyl, etc.; and the like.
but-2-en-2-yl, buta-1,3-diene-1-yl, buta-1,3-dien-2-yl, cyclobut-1-en-1-yl, cyclobut-1-en-3-yl, cyclobuta-1,3-diene-1-yl, etc.; penta-2,4-diene, and the like.

"Alkynyl" refers to an unsaturated branched, straight-chain or cyclic alkyl radical having at least one carbon-carbon triple bond, derived by the removal of one hydrogen atom from a single carbon atom of a parent alkyne. Typical alkynyl groups include, but are not limited to, ethynyl; propynyls such as prop-1-yn-1-yl, prop-2-yn-1-yl, etc.; butynyls such as but-1-yn-1-yl, but-1-yn-3-yl, but-3-yn-1-yl, etc.; and the like.

"Acyl" refers to a radical -(C=O)R, where R is hydrogen, alkyl, cycloalkyl, cycloalkylalkyl, aryl, arylalkyl, heteroaryl, heteroaryalkyl as defined herein. Representative examples include, but are not limited to, formyl, acetyl, cyclohexylcarbonyl, cyclohexylmethylcarbonyl, benzoyl, benzylicarbolyl and the like.

"Acyaminoo" refers to a radical -(NR(C=O)R, where R' and R are each independently hydrogen, alkyl, cycloalkyl, cycloalkylalkyl, aryl, arylalkyl, heteroaryl, heteroaryalkyl, as defined herein. Representative examples include, but are not limited to, formylamino, acetylamino, cyclohexylcarbonylamino, cyclohexylmethylcarbonylamino, benzylicarbolamino, benzylicarbolylamino and the like.

"Alkylamino" means a radical -NRHR where R represents an alkyl or cycloalkyl group as defined herein. Representative examples include, but are not limited to, methylamino, ethylamino, 1-methylethylamino, cyclohexylamino and the like.

"Alkox" refers to a radical -(OR where R represents an alkyl or cycloalkyl group as defined herein. Representative examples include, but are not limited to, methoxy, ethoxy, propoxy, butoxy, cyclohexyloxy and the like.

"Alkoxyaminoo" refers to a radical -(C=O)-alkoxy where alkoxy is as defined herein.

"Alkyoxosulfonyl" refers to a radical -(SO2)OR, where R is an alkyl or cycloalkyl group as defined herein. Representative examples include, but are not limited to, methylsulfonyl, ethylsulfonyl, propylsulfonyl, butylsulfonyl and the like.

"Alkyloxysulfonyl" refers to a radical -SO2(R where R is an alkyl or cycloalkyl group as defined herein. Representative examples include, but are not limited to, methylsulfinyl, ethylsulfinyl, propylsulfinyl, butylsulfinyl and the like.

"Alkylthio" refers to a radical -SR where R is an alkyl or cycloalkyl group as defined herein that may be optionally substituted as defined herein. Representative
examples include, but are not limited to, methylthio, ethylthio, propylthio, butylthio, and the like.

“Amino” refers to the radical -NH$_2$.

“Aryl” refers to a monovalent aromatic hydrocarbon radical derived by the removal of one hydrogen atom from a single carbon atom of a parent aromatic ring system. Typical aryl groups include, but are not limited to, groups derived from fused ring systems that comprise one or more aromatic rings, or conjugated ring systems, such as aceantricylene, aceantranaphylene, aceacenanthrylene, anthracene, azulene, benzene, chrysene, coronene, fluoranthene, heptaphene, hexacene, hexaphene, azaindace, azaindace, azaindace, azaindace, azaindace, azaindace, naphthalene (hexulene), octacene, octacene, octacene, ovulene, pentacene, pentacene, pentacene, perylene, phenalene, phenanthrene, picene, pleiadene, pyrene, pyranthrene, rubicene, tetraphenylen, triphenylene, triphenylene, and the like. Additionally, aryl groups include fused ring systems containing at least one aromatic ring and at least one partially saturated ring, such as fluorene, indane, biphenylene and the like. Preferably, an aryl group comprises from 6 to 20 carbon atoms, more preferably between 6 to 12 carbon atoms.

“Arylalkyl” refers to an acyclic alkyl radical in which one of the hydrogen atoms bonded to a carbon atom, typically a terminal or sp$^3$ hybridized carbon atom, is replaced with an aryl group. Typical arylalkyl groups include, but are not limited to, benzyl, 2-phenylethyl-1-yl, 2-phenylethyl-1-yl, naphthylmethyl, 2-naphthylethyn-1-yl, 2-naphthylethyn-1-yl, naphthobenzyl, 2-naphthophenylethyn-1-yl and the like. Where specific alkyl moieties are intended, the nomenclature arylalkanyle, arylalkenyl and/or arylalkynyl is used. Preferably, an arylalkyl group is (C$_6$-C$_9$) arylalkenyl, e.g., the alkanyl, alkynyl or alkynyl moiety of the arylalkenyl group is (C$_1$-C$_9$) and the aryl moiety is (C$_6$-C$_9$), more preferably, an arylalkyl group is (C$_6$-C$_9$) arylalkyl, e.g., the alkanyl, alkynyl or alkynyl moiety of the arylalkyl group is (C$_1$-C$_9$) and the aryl moiety is (C$_6$-C$_9$).

“Arylalkyloxy” refers to an -O-arylalkyl radical where arylalkyl is as defined herein.

“ARYLOXOCARBOXY” refers to a radical -C(=O)-O-aryl where aryl is as defined herein.

“CARBOXARYL” refers to the radical -C(=O)N(R)$_2$ where each R group is independently hydrogen, alkyl, cycloalkyl or aryl as defined herein, which may be optionally substituted as defined herein.
“Carboxy” means the radical -C(=O)OH.

“Cyano” means the radical -CN.

“Cycloalkyl” refers to a saturated or unsaturated cyclic alkyl radical. Where a specific level of saturation is intended, the nomenclature “cycloalkynyl” or “cycloalkenyl” is used. Typical cycloalkyl groups include, but are not limited to, groups derived from cyclopropane, cyclobutane, cyclopentane, cyclohexane, and the like. Preferably, the cycloalkyl group is C₁-C₁₀ cycloalkyl, more preferably C₃-C₇ cycloalkyl.

“Cycloalkenyl” refers to a saturated or unsaturated cyclic alkyl radical in which one or more carbon atoms (and any associated hydrogen atoms) are independently replaced with the same or different heteroatom. Typical heteroatoms to replace the carbon atom(s) include, but are not limited to, N, P, O, S, Si, etc. Where a specific level of saturation is intended, the nomenclature “cycloalkenyl” or “cycloalkynyl” is used. Typical cycloalkenyl and cycloalkynyl groups include, but are not limited to, groups derived from epoxides, imidazolidine, morpholine, piperazine, piperidine, pyrazolidine, pyrrolidine, quinuclidine, and the like.

“Cycloalkenyl” refers to a radical -C(=O)-OR where R is cycloalkenyl as defined herein.

“Diethylamino” means a radical -NRR’ where R and R’ independently represent an alkyl or cycloalkyl group as defined herein. Representative examples include, but are not limited to dimethylamino, methyl-ethylamino, di-(1-methyl ethyl)amino, cyclohexyl-methyl amino, cyclohexyl-ethyl amino, cyclohexyl-propyl amino, and the like.

“Halo” means fluoro, chloro, bromo, or iodo.

“Heteroalkoxy” means an -O-heteroalkyl radical where heteroalkyl is as defined herein.

“Heteroalkyl,” “Heteroalkenyl,” “Heteroalkynyl” refer to alkyl, alkenyl, alkynyl and alkylenyl groups, respectively, in which one or more of the carbon atoms (and any associated hydrogen atoms) are each independently replaced with the same or different heteroatomic groups. Typical heteroatomic groups include, but are not limited to, O, S, O-S-, S-O-, O-S-, O-S-, N=O, N=O, N=O, N=O, N=O, N=O, NR-, PO−, O=P(O)−, O=P(O)-, S=O−, S(O)−, S(O)−, SnH−, and the like, wherein R’ is hydrogen, alkyl, substituted alkyl, cycloalkyl, substituted cycloalkyl, aryl or substituted aryl.
“Heteroaryl” refers to a monovalent heteroaromatic radical derived by the removal of one hydrogen atom from a single atom of a parent heteroaromatic ring system. Typical heteroaryl groups include, but are not limited to, groups derived from acridine, azaindole, carbazole, β-carboline, chromane, chromene, cinolines, furan, imidazole, indazole, indole, indoline, indolizine, isobenzofuran, isochromene, isoindole, isoindoline, isoquinoline, isothiazole, isoxazole, naphthridine, oxadiazole, oxazole, perimidine, phenanthridine, phenanthroline, phenazine, phthalazine, pteridine, purine, pyran, pyrazine, pyrazolo, pyridazine, pyridine, pyrimidine, pyrrole, pyrrolizine, quinoxaline, quinolizine, quinolone, tetrazole, thiadiazole, thiazole, thiophene, triazole, xanthene, and the like. Preferably, the heteroaryl group has from 5-20 non-hydrogen atoms, with 5-10 non-hydrogen atoms being particularly preferred. Preferred heteroaryl groups are those derived from thiophene, pyrrole, benzothiophene, benzofuran, indole, pyridine, quinoline, imidazole, oxazole and pyrazine.

“Heteroaryl oxy carbonyl” refers to a radical -C(=O)-OR where R is heteroaryl as defined herein.

“Heteroarylalkyl” refers to an acyclic alkyl radical in which one of the hydrogen atoms bonded to a carbon atom, typically a terminal or sp² hybridized carbon atom, is replaced with a heteroaryl group. Where specific alkyl moieties are intended, the nomenclature heteroarylalkyl, heteroarylalkenyl and/or heteroarylalkynyl is used. Preferably, the heteroarylalkyl radical has 6-30 non-hydrogen atoms, e.g., the alkanyl, alkenyl or alkynyl moiety of the heteroarylalkyl is C₁₀ and the heteroaryl moiety is a 5-20 membered heteroaryl, more preferably, a 6-20 membered heteroarylalkyl, e.g., the alkanyl, alkenyl or alkynyl moiety of the heteroarylalkyl is 1-8 membered and the heteroaryl moiety is a 5-12 membered heteroaryl.

“Hydroxy” means the radical -OH.

“Oxo” means the divalent radical ==O.

“Prodrug” refers to a pharmacologically inactive derivative of a drug molecule that requires a transformation within the body to release the active drug.

“Promeoetyl” refers to a form of protecting group that when used to mask a functional group within a drug molecule converts the drug into a prodrug. Typically, the promeoetyl will be attached to the drug via bond(s) that are cleaved by enzymatic
or non-enzymatic means in vivo. Ideally, the prodrug is rapidly cleaved from the body upon cleavage from the prodrug.

"Protecting group" refers to a grouping of atoms that when attached to a reactive group in a molecule masks, reduces or prevents that reactivity. Examples of protecting groups can be found in Green et al., "Protective Groups in Organic Chemistry", (Wiley, 2nd ed. 1991) and Harrison et al., "Compendium of Synthetic Organic Methods", Vols. 1-8 (John Wiley and Sons, 1971-1996). Representative amino protecting groups include, but are not limited to, formyl, acetyl, trifluoroacetyl, benzyl, benzoxycarbonyl ("CBZ"), tert-butoxycarbonyl ("Boc"), trimethylsilyl ("TMS"), 2-trimethylsilyl-ethanesulfonyl ("SES"), trityl and substituted trityl groups, allyloxycarbonyl, 9-fluorenylmethyloxycarbonyl ("Fmoc"), nitroveratryloxycarbonyl ("NVOA") and the like. Representative hydroxy protecting groups include, but are not limited to, those where the hydroxy group is either acetylated or alkylated such as benzyl, and trityl ethers as well as alkyl ethers, tetrahydropyranyl ethers, trialkylsilyl ethers and allyl ethers.

"Substituted" refers to a group in which one or more hydrogen atoms are each independently replaced with the same or different substituent(s). Typical substituents include, but are not limited to, -X, -R15, -OR16, -SR16, -S-, -NR16R15, =NR16, =C=N-, CN, -OCN, -SCN, -NO2, -NO-, -N=N-, -S(S)O2O-, -  
-SO2OH, -S(O)2OR16, -OS(O)2O-, -OS(O)2R16, -PO(O)O-, -PO(O)OR16, -PO(O)R16, -PO(O)OR16, -C(O)R16, -C(O)OR16, -C(O)NR16R15, -C(S)R16, -C(S)OR16, -NR16R16, -C(NR16)R16, -NR16C(NR16)R16 and -C(NR16)NR16R16, where each X is independently a halogen; each R16, R15, R16 and R17 are independently hydrogen, alkyl, substituted alkyl, aryl, substituted aryl, aryalkyl, substituted arylalkyl, cycloalkyl, substituted cycloalkyl, cycloalkylalkyl, substituted cycloalkylalkyl, heteroaryl, substituted heteroaryl, heteroarylalkyl, substituted heteroarylalkyl, heteroarylalky, substituted heteroarylalkyl, substituted heteroarylalkyl, substituted heteroarylalkyl, substituted heteroarylalkyl, or optionally R16 and R17 together with the atom to which they are both attached form a cycloalkylalkyl or substituted cycloalkylalkyl ring; and R18 and R19 are independently hydrogen, alkyl, substituted alkyl, aryl, substituted aryl, aryalkyl, substituted alkyl, cycloalkyl, substituted alkyl, cycloalkylalkyl, substituted cycloalkylalkyl, heteroarylalkyl, substituted heteroarylalkyl, heteroaryl, substituted heteroarylalkyl or substituted heteroarylalkyl.

"Thio" means the radical –SH.
“Valence” refers to the number of bonds that an atom forms. In organic chemistry this ordinarily means that no unpaired electrons are associated with an atom in its normal valence when bonded in a chemically stable molecule. Thus, for example, the normal valence of carbon is 4, hydrogen is 1, nitrogen is 3, oxygen is 2, sulfur is 2, and the halogens each have a normal valence of 1.

Reference will now be made in detail to preferred embodiments of the invention. While the invention will be described in conjunction with the preferred embodiments, it will be understood that it is not intended to limit the invention to those preferred embodiments. To the contrary, it is intended to cover alternatives, modifications, and equivalents as may be included within the spirit and scope of the invention as defined by the appended claims.

The Compounds of the Invention

The compounds of the Invention include compounds of formula (I):

![Chemical structure](image)

or a pharmaceutically available salt, solvate of hydrate thereof wherein:

- A, B and C are independently carbon, nitrogen, oxygen or sulfur provided that at least one of A, B and C is nitrogen, oxygen or sulfur and that no more than one of A, B and C are oxygen or sulfur;
- W is carbon, oxygen, nitrogen, or sulfur and when W is other than carbon and nitrogen, one or more of R₆, R₉ and R₁₀ is absent so that a normal valence on W is maintained;
- R₁ is hydrogen, alkyl, substituted alkyl, acyl, substituted acyl, acylamino, substituted acylamino, amino, alkylamino, substituted alkylamino, dialkylamino, substituted dialkylamino, alkoxycarbonyl, substituted alkoxycarbonyl, arylalkyl,
- substituted arylalkyl, arylalkoxycarbonyl, substituted arylalkoxycarbonyl, carbamoyl, substituted carbamoyl, carboxy, cyano, halo, heteroalkyl or substituted heteroalkyl, heteroarylalkyl or substituted heteroarylalkyl;
R₂ₙ, R₆, R₆ₙ, R₄ₙ, and R₇ are independently hydrogen, alkyl, substituted alkyl, acyl, substituted acyl, acylamino, substituted acylamino, alkoxy, substituted alkoxy, amino, alkylamino, substituted alkylamino, dialkylamino, substituted dialkylamino, alkylsulfonyl, substituted alkylsulfonyl, alkylsulfanyl, substituted alkylsulfanyl, alkythio, substituted alkythio, alkoxy carbonyl, substituted alkoxy carbonyl, arylalkyl, substituted aryalkyl, aryloxy carbonyl, substituted aryloxy carbonyl, carbamoyl, substituted carbamoyl, carboxyl, cyano, halo, heteroalkyl, substituted heteroalkyl, heteroarylalkyl, substituted heteroarylalkyl or hydroxy;

R₂ₙ', R₆¹, R₄ₙ', and R₇ are absent or are independently hydrogen, alkyl,

substituted alkoxy, amino, alkylamino, substituted alkylamino, dialkylamino, substituted dialkylamino, alkylsulfonyl, substituted alkylsulfonyl, alkylsulfanyl, substituted alkylsulfanyl, alkythio, substituted alkythio, alkoxy carbonyl, substituted alkoxy carbonyl, arylalkyl, substituted aryalkyl, aryloxy carbonyl, substituted aryloxy carbonyl, carbamoyl, substituted carbamoyl, carboxyl, cyano, halo, heteroalkyl, substituted heteroalkyl, heteroarylalkyl, substituted heteroarylalkyl or hydroxy;

R₉ is absent or is hydrogen, alkyl, substituted alkyl, acyl, substituted acyl, acylamino, substituted acylamino, amino, alkylamino, substituted alkylamino, dialkylamino, substituted dialkylamino, alkoxy carbonyl, substituted alkoxy carbonyl, aryalkyl, substituted aryalkyl, aryloxy carbonyl, substituted aryloxy carbonyl, carbamoyl, substituted carbamoyl, carboxyl, cyano, halo, heteroalkyl, substituted heteroalkyl, heteroarylalkyl or substituted heteroarylalkyl;

R₉ is hydrogen, alkyl, substituted alkyl, alkoxy, substituted alkoxy, amino, alkylamino, substituted alkylamino, dialkylamino, substituted dialkylamino, carboxyl, cyano, halo, oxo, thio, hydroxy or is absent;

R₉₀ is hydrogen, alkyl, substituted alkyl, acyl, substituted acyl, alkoxy carbonyl, substituted alkoxy carbonyl, ary, substituted aryalkyl, substituted aryalkyl, aryl carbonyl, substituted aryloxy carbonyl, cycloalkyl, substituted cycloalkyl, cyclo heteroalkyl, substituted cyclo heteroalkyl, heteroalkyl, substituted hetero alkyl, heteroaryl, substituted heteroaryl, heteroaryl alkyl, or is absent;

R₉₀ and Rₙ₂ may bond directly to one another to form a ring, and an additional ring such as a benzene ring, which may itself be substituted with an alkyl, alkoxy,
halo, alkyl, substituted alkyl, acyl, substituted acyl, cycloalkyl, or substituted cycloalkyl, may fuse to the bond between R₁₀ and R₁₁; and

R₁₁ and R₁₂ are independently hydrogen, alkyl, substituted alkyl, acyl, substituted acyl, acylamino, substituted acylamino, alkoxy, substituted alkoxy, amino, alkylamino, substituted alkylamino, dialkylamino, substituted dialkylamino, alkylsulfonyl, substituted alkylsulfonyl, alkyloxysulfonyl, substituted alkyloxysulfonyl, alkythio, substituted alkythio, alkoxy carbonyl, substituted alkoxy carbonyl, aryl, substituted aryl, arylalkyl, substituted arylalkyl, aryloxy carbonyl, carbamoyl, substituted carbamoyl, carboxy, cyano, halo, oxo, thio, heteroalkyl, substituted heteroalkyl, heteroaryl, substituted heteroaryl, heteroaryalkyl, substituted heteroaryalkyl or hydroxy.

The bonds in formula (I) that are shown with single and dashed lines are intended to represent alternative forms of the structure. That is, one or more, but preferably one, such bonds may be a double bond provided that normal valences of the atoms in the rings are satisfied. To the extent it is necessary, when maintaining the valences of ring carbon atoms that are bonded to one another by a double bond, a ring-substituent attached to one or more such ring carbon atoms may be absent.

The present invention also includes compounds of structural formula (II):

![Structural formula (II)](image)

or a pharmaceutically available salt, solvate or hydrate thereof wherein R₆, R₇, R₉, R₈, R₆', R₇', R₈', R₉', R₁₀, R₁₁, A, B and C, and W, are as previously defined for formula (I), and R₂' is defined in the same manner as R₂ and R₂' were previously defined for formula (I), and the bonds with single and dashed lines indicate alternative isomeric forms as discussed hereinabove.

The present invention also includes compounds of structural formula (III):

![Structural formula (III)](image)
or a pharmaceutically available salt, solvate or hydrate thereof, wherein \( R_1, R_2, R_3', \)
\( R_4, R_5, R_6, R_7, R_8, R_9, R_{10}, R_{11}, R_{12}, A, B \) and \( C \), and \( W \) are as
previously defined in formula (I) and \( R_3' \), \( R_{11} \) and \( R_{12} \) are defined in the same manner
as \( R_2, R_3', R_5, R_6, R_7, R_8 \) and \( R_9 \) were previously defined in formula (I), and the bonds
with single and dashed lines indicate alternative isomeric forms, as discussed
hereinabove, and wherein \( R_{10} \) and \( R_{12} \) (instead of \( R_2 \)) may bond directly to one
another to form a ring, and an additional ring may fuse to the bond between \( R_{10} \) and
\( R_{12} \).

In one embodiment of compounds of structural formulae (I), (II) and (III), A,
B and C are carbon or nitrogen. Preferably, A is carbon and B and C are nitrogen.

In another embodiment of compounds of structural formulae (I), (II) and (III),
A, B and C are carbon, nitrogen or sulfur. Preferably, A is sulfur, B is carbon and C
is nitrogen.

In still another embodiment of compounds of structural formulae (I), (II) and
(III), A, B and C are carbon, nitrogen or oxygen. Preferably, A is carbon, B is oxygen
and C is nitrogen or A is carbon, B is nitrogen and C is oxygen.

In a preferred embodiment of compounds of structural formulae (I), (II) and
(III), W is carbon.

In another embodiment of compounds of structural formulae (I), (II) and (III),
W is oxygen and bonds with a double bond to the ring carbon atom to which it is
attached, and \( R_6, R_8 \) and \( R_{10} \) are absent.

In one preferred embodiment of compounds of structural formulae (I), (II) and
(III), \( R_1 \) and \( R_3 \) are independently hydrogen, alkyl, substituted alkyl, acyl, substituted
acyl, alkoxyacarbonyl, substituted alkoxyacarbonyl, carboxy, cyano, carbamoyl,
substituted carbamoyl, heteroalkyl or substituted heteroacylalkyl. Preferably, \( R_1 \) and
(III), W is carbon.

In another embodiment of compounds of structural formulae (I), (II) and (III),
W is oxygen and bonds with a double bond to the ring carbon atom to which it is
attached, and \( R_6, R_8 \) and \( R_{10} \) are absent.

In one preferred embodiment of compounds of structural formulae (I), (II) and
(III), \( R_1 \) and \( R_3 \) are independently hydrogen, alkyl, substituted alkyl, acyl, substituted
acyl, alkoxyacarbonyl, substituted alkoxyacarbonyl, carboxy, cyano, carbamoyl,
substituted carbamoyl, heteroalkyl or substituted heteroacylalkyl. Preferably, \( R_1 \) and
$R_4$ are independently hydrogen, alkyl or substituted alkyl. More preferably, $R_1$ and $R_4$ are independently hydrogen or methyl.

In one embodiment of compounds of structural formula (I), $R_2$, $R_3$, $R_5$, $R_6$, $R_7$, $R_8$, $R_9$ and $R_8$ are independently hydrogen, alkyl, substituted alkyl, acyl, substituted acyl, alkoxycarbonyl, substituted alkoxycarbonyl, carboxy, cyano, halo, heteroalkyl, substituted heteroalkyl or hydroxy. Preferably, $R_2$, $R_3$, $R_5$, $R_6$, $R_7$, $R_8$, $R_9$ and $R_8$ are independently hydrogen, alkanyl or substituted alkanyl. More preferably, $R_2$, $R_3$, $R_5$, $R_6$, $R_7$, $R_8$, $R_9$, $R_8$ and $R_8$ are hydrogen or methyl.

In an embodiment of compounds of structural formula (II), $R_2$, $R_3$, $R_5$, $R_6$, $R_7$ and $R_8$ are independently hydrogen, alkyl, substituted alkyl, acyl, substituted acyl, alkoxycarbonyl, substituted alkoxycarbonyl, carboxy, cyano, halo, heteroalkyl, substituted heteroalkyl or hydroxy. Preferably, $R_2$, $R_3$, $R_5$, $R_6$, $R_7$ and $R_8$ are independently hydrogen, alkanyl or substituted alkanyl. More preferably, $R_2$, $R_3$, $R_5$, $R_6$, $R_7$ and $R_8$ are hydrogen or methyl.

In an embodiment of compounds of structural formula (III), $R_2$, $R_3$, $R_5$, $R_6$, $R_7$, $R_8$, $R_9$, $R_{10}$, $R_{11}$, $R_{12}$, $R_{13}$ and $R_{14}$ are independently hydrogen, alkyl, substituted alkyl, acyl, substituted acyl, alkoxycarbonyl, substituted alkoxycarbonyl, carboxy, cyano, halo, heteroalkyl, substituted heteroalkyl or hydroxy. Preferably, $R_2$, $R_3$, $R_5$, $R_6$, $R_7$, $R_8$, $R_{10}$, $R_{11}$, $R_{12}$, $R_{13}$ and $R_{14}$ are independently hydrogen, alkanyl or substituted alkanyl. More preferably, $R_2$, $R_3$, $R_5$, $R_6$, $R_7$, $R_8$, $R_{10}$, $R_{12}$ and $R_{14}$ are hydrogen or methyl.

In an embodiment of compounds of structural formulae (I), (II) and (III), $R_4$ and $R_4'$ are absent. In another embodiment of compounds of structural formulae (I), (II) and (III), $R_4$ and $R_4'$ are absent. In another embodiment of compounds of structural formulae (I) and (III), $R_4'$ and $R_4''$ are absent. In another embodiment of compounds of structural formulae (I) and (III), $R_4'$ and $R_4''$ are absent. In another embodiment of compounds of structural formulae (I) and (III), $R_4'$ and $R_4''$ are absent. In another embodiment of compounds of structural formulae (I) and (III), $R_4'$ and $R_4''$ are absent.
alkyl or substituted alkanyl. More preferably, \( R_8', R_9' \) and \( R_7' \) are hydrogen or methyl.

In an embodiment of compounds of structural formula (II), \( R_2', R_3' \) and \( R_7' \) are independently hydrogen, alkyl, substituted alkyl, acyl, substituted acyl, alkoxy, substituted alkoxy, amino, alkoxy carbonyl, substituted alkoxy carbonyl, carboxyl, substituted carbonyl, carboxyl, cyano, halo, heteroalkyl, substituted heteroalkyl or hydroxy. Preferably, \( R_2' \), \( R_3' \) and \( R_7' \) are independently hydrogen, alkyl or substituted alkyl. More preferably, \( R_2' \), \( R_3' \) and \( R_7' \) are hydrogen or methyl.

In another embodiment of compounds of structural formulae (I), (II) and (III), \( R_8 \) is hydrogen, alkoxy, substituted alkoxy, halo, o xo, thio or hydroxy. Preferably, \( R_8 \) is alkoxy, o xo, hydroxy or is absent.

In still another embodiment of compounds of structural formulae (I), (II) and (III), \( R_{10} \) is hydrogen, alkyl, substituted alkyl, aryl, substituted aryl, aroyl, substituted aroyl, heteroaryl, substituted heteroaryl, heteroaryl, substituted heteroaryl or is absent. Preferably, \( R_{10} \) is aryl, substituted aryl, heteroaryl or substituted heteroaryl.

In still another embodiment of compounds of structural formulae (I), (II) and (III), \( R_{11} \) and \( R_{12} \) are independently hydrogen, alkyl, alkoxy, amino, alkylamino, dialkylamino, alkylsulfonyl, alkylsulfanyl, alkylthio, alkoxy carbonyl, substituted alkoxy carbonyl, aryl, substituted aryl, aryalkyl, substituted aryalkyl, carbamoyl, carboxyl, cyano, halo, o xo, thio, heteroalkyl, heteroaryl, substituted heteroaryl, heteroaryl alkyl, substituted heteroaryl alkyl or hydroxy. Preferably, \( R_{11} \) and \( R_{12} \) are independently hydrogen, aryl, substituted aryl, aryalkyl, substituted aryalkyl, o xo, heteroaryl, heteroaryl, substituted heteroaryl, heteroaryl alkyl, substituted heteroaryl alkyl or hydroxy.

More preferably, \( R_{11} \) and \( R_{12} \) are independently hydrogen, aryl or substituted aryl.

In one preferred embodiment of compounds of structural formula (I), \( R_1 \), \( R_2 \), \( R_4 \), \( R_5 \), \( R_6 \), \( R_7 \), \( R_8 \), \( R_9 \), \( R_10 \) and \( R_11 \) are hydrogen, alkyl or aryalkyl and \( R_8 \) and \( R_9 \) are absent. In another preferred embodiment, \( R_1 \) is methyl, \( R_2 \), \( R_4 \), \( R_5 \), \( R_6 \), \( R_7 \), \( R_9 \) are hydrogen and \( R_11 \) is hydrogen.

The following embodiments are more specific embodiments of the preceding two preferred embodiments. In one embodiment, \( R_9 \) is alkoxy, o xo or hydroxy. In another embodiment, \( R_9 \) is aryl, substituted aryl, heteroaryl or substituted heteroaryl.

In still another embodiment, \( A \) is carbon, \( B \) and \( C \) are nitrogen, \( R_{11} \) is hydrogen and
R_{12} is aryl, substituted aryl, heteroaryl or substituted heteroaryl. In still another embodiment, A is sulfur, B is carbon and C is nitrogen. In still another embodiment, A is carbon, B is oxygen and C is nitrogen. In still another embodiment, A is carbon, B is nitrogen and C is oxygen.

In one preferred embodiment of compounds of structural formula (II), R_{1}, R_{2}, R_{12}, R_{5}, R_{6}, R_{7}, R_{7} and R_{8} are hydrogen, alkyl or arylalkyl and R_{4} and R_{7} are absent. In another preferred embodiment, R_{1} is methyl, R_{2}, R_{2}, R_{5}, R_{6}, R_{7}, R_{7} and R_{8} are hydrogen and R_{4} and R_{7} are absent.

The following embodiments are more specific embodiments of the preceding two preferred embodiments. In one embodiment, R_{9} is alkoxy, oxo or hydroxy. In another embodiment, R_{10} is aryl, substituted aryl, heteroaryl or substituted heteroaryl.

In still another embodiment, A is carbon, B and C are nitrogen. R_{11} is hydrogen and R_{12} is aryl, substituted aryl, heteroaryl or substituted heteroaryl. In still another embodiment, A is sulfur, B is carbon and C is nitrogen. In still another embodiment, A is carbon, B is oxygen and C is nitrogen. In still another embodiment, A is carbon, B is nitrogen and C is oxygen.

In one preferred embodiment of compounds of structural formula (III), R_{1}, R_{2}, R_{3}, R_{12}, R_{5}, R_{6}, R_{7}, R_{7} and R_{8} are hydrogen, alkyl or arylalkyl and R_{4} and R_{7} are absent. In another preferred embodiment, R_{1} is methyl, R_{2}, R_{2}, R_{5}, R_{6}, R_{7}, R_{7} and R_{8} are hydrogen and R_{4} and R_{7} are absent.

The following embodiments are more specific embodiments of the preceding two preferred embodiments. In one embodiment, R_{9} is alkoxy, oxo or hydroxy. In another embodiment, R_{10} is aryl, substituted aryl, heteroaryl or substituted heteroaryl.

In still another embodiment, A is carbon, B and C are nitrogen. R_{11} is hydrogen and R_{12} is aryl, substituted aryl, heteroaryl or substituted heteroaryl. In still another embodiment, A is sulfur, B is carbon and C is nitrogen. In still another embodiment, A is carbon, B is oxygen and C is nitrogen. In still another embodiment, A is carbon, B is nitrogen and C is oxygen.

In a preferred embodiment of compounds of structural formula (I), R_{1} is methyl, R_{2}, R_{2}, R_{5}, R_{6}, R_{7}, R_{7} and R_{8} are hydrogen, R_{4} and R_{7} are absent, R_{9} is alkoxy, oxo or hydroxy, R_{10} is aryl, substituted aryl, heteroaryl or substituted heteroaryl, A is carbon, B and C are nitrogen, R_{11} is hydrogen and R_{12} is aryl, substituted aryl, heteroaryl or substituted heteroaryl. Preferably, R_{9} is hydroxy and R_{10} is
In a preferred embodiment of compounds of structural formula (II), R₁ is methyl, R₂, R₂', R₆, R₆', R₇, R₇' and R₈ are hydrogen, R₉ and R₉' are absent, R₁₀ is alkoxy, oxo or hydroxy, R₁₀ is aryl, substituted aryl, heteroaryl or substituted heteroaryl, A is carbon, B and C are nitrogen, R₁₁ is hydrogen and R₁₂ is aryl, substituted aryl, heteroaryl or substituted heteroaryl.

In a preferred embodiment of compounds of structural formula (III), R₁ is methyl, R₂, R₂', R₆, R₆', R₇, R₇', R₈, R₁₀, R₁₁ and R₁₂ are hydrogen, R₉ and R₉' are absent, R₁₀ is alkoxy, oxo or hydroxy, R₁₀ is aryl, substituted aryl, heteroaryl or substituted heteroaryl, A is carbon, B and C are nitrogen, R₁₁ is hydrogen and R₁₂ is aryl, substituted aryl, heteroaryl or substituted heteroaryl.

In one embodiment, compounds of structural formulae (I), (II) and (III) do not include any furanyl derivatives (i.e., when one of A, B or C is oxygen, the remaining members of A, B or C are not carbon). In a more specific embodiment, the compounds of structural formulae (I), (II) and (III) do not include compounds where C is oxygen and A and B are carbon or where A is oxygen and B and C are carbon.

In one embodiment of the compounds of structural formulae (I), R₁₀ and R₁₁ bond directly to one another to form a 5-membered ring. W is nitrogen, R₀ is hydrogen, R₃ and R₃' are both absent, and a benzene ring is fused to the bond between R₁₀ and R₁₁. In a more specific embodiment, the benzene ring is substituted with a halogen, or an alkoxy group.

In another preferred embodiment, the compounds of structural formulae (I), (II) and (III) do not include any thiaryl derivatives (i.e., when one of A, B or C is sulfur, the remaining members of A, B or C are not carbon). In a more specific embodiment, the compounds of structural formulae (I), (II) and (III) do not include compounds where C is sulfur and A and B are carbon. Preferably, in this embodiment, R₁₁ and R₁₂ are not hydrogen and methyl, respectively.
Synthesis of the Compounds of the Invention

The compounds of the invention may be obtained via the synthetic methods illustrated in Schemes 1-7, as shown in FIGs. 1-7, respectively. Starting materials useful for preparing compounds of the invention and intermediates thereof are commercially available or can be prepared by well-known synthetic methods. Other methods for synthesis of the compounds described herein are either described in the art or will be readily apparent to the skilled artisan in view of general references well-known in the art (see e.g., Green et al., “Protective Groups in Organic Chemistry”, Wiley, 2nd ed. 1991); Harrison et al., “Compendium of Synthetic Organic Methods”, Vols. 1-8 (John Wiley and Sons, 1971-1996); “Beilstein Handbook of Organic Chemistry”, Beilstein Institute of Organic Chemistry, Frankfurt, Germany; Feiser et al., “Reagents for Organic Synthesis”, Volumes 1-17, Wiley Interscience; Trost et al., “Comprehensive Organic Synthesis”, Pergamon Press, 1991; “Theilheimer’s Synthetic Methods of Organic Chemistry”, Volumes 1-45, Karger, 1991; March, “Advanced Organic Chemistry”, Wiley Interscience, 1991; Larock “Comprehensive Organic Transformations”, VCH Publishers, 1989; Paquette, “Encyclopedia of Reagents for Organic Synthesis”, John Wiley & Sons, 1995) and may be used to synthesize the compounds of the invention. Further, specific references for synthesizing indans, decalins and guanines are easily accessible to the ordinarily skilled artisan. Accordingly, the methods presented in the Schemes herein are illustrative rather than comprehensive.

Compounds depicted in Schemes 1-7 of FIGs. 1-7 are compounds of structural formula (I), or precursors thereof. Those of ordinary skill in the art will appreciate that the synthetic steps illustrated in Schemes 1-7 are also applicable to the preparation of compounds of structural formulae (II) and (III).

A preferred synthetic route to the compounds of structural formula (I) (and, by analogy, to compounds of structural formulae (I) or (II)) proceeds through ketone 107 and/or its derivatives, which may be made by the route depicted in Scheme 1, as depicted in FIG. 1. Six membered dione 101 is either commercially available or may be synthesized from readily available starting materials (the same is true for the five-membered and seven membered analogues of dione 101). Treatment of dione 101 with base and alkylating agent (R) provides alkylated dione 103, which may be annelated (e.g., using a methyl vinyl ketone equivalent and base) to yield 3-keto...
decalin 105. Other methods of assembling a six-membered ring are well known to the skilled artisan, (see e.g., Jung, Tetrahedron, 32(1), 3-31, (1976)). The unsaturated ketone 105 may be selectively protected with ethanedithiol and acid to yield the unsaturated thioleter 107.

An exemplary method for converting a derivative of 107, thioleter 108 (108 is an embodiment of 107 wherein R2 and R2' are hydrogen) to ketal 113 is illustrated in Scheme 2, as depicted in FIG.2. Conversion of 107 to enal 109 may be accomplished by forming an intermediate enol ether (e.g., using a base, such as Ph3PCH2OCH3) followed by concurrent dehydrogenation and hydrolysis (e.g., Pd(OAc)2), (see Takayama et al., J. Org. Chem., 1992, 57, 2173). Conjugate addition (e.g., using (R2)2CuLi), (Coates et al., J. Org. Chem., 39, 275, (1974); Posner et al., Tet. Lett., 3215, (1977)) followed by enolate trapping with RX provides aldehyde 111, which may be converted to ketal 113 by a series of conventional reactions (e.g., formation of a ketal and removal of the thioleter).

Alternatively, ketone 108 may be functionalized by well-known methods such as aldol condensation to provide β hydroxy alcohol 123, as illustrated in Scheme 3, depicted in FIG.3. Ketone 108 may also be alkylated using conventional methods known in the art to provide alkyl derivative 125. It should be noted that when R1, R2, R2', R3, R4, R5, and R6 are hydrogen, the compounds where R is n-butyl, benzyl and isobutyl have been synthesized. Further, other transformations of ketone 108 will be obvious to one of ordinary skill in the art and are within the purview of the present invention (e.g., dehydrogenation of the enone followed by conjugate addition and enolate trapping with an electrophile, α-alkylation of the enone, dialkylation of the ketone, etc.).

Ketal-enone 113 may be converted to a number of useful intermediates as illustrated in Scheme 4, as shown in FIG.4. For example, conjugate addition may be used to provide an R4 substituent (e.g., (R4)2CuLi or R4=C, hydrozirconocene, MeLi, CeCN, LiCl), (Coates et al., J. Org. Chem., 39, 275, (1974); Posner et al., Tet. Lett., 3215, (1977); Lipshutz et al., J. Am. Chem. Soc., 112(20), 7440, (1990)) as in compound 117. Alternatively, 113 may be converted to the γ unsaturated alcohol 119 by treatment, for example, with oxygen, triethylamine and triethylamine oxide (Shimizu et al., Chem. Pharm. Bull., 37(7), 1963, (1989)). The double bond of enone 113 may be hydrogenated (e.g., H2, noble metal catalyst or CuI, LiCl, followed by tri-
n-butyl tin hydride) to provide the saturated ketone 221 (Lipszczek et al., Synlett., 64, (1989)). Other transformations of enone 113 will be readily apparent to the artisan of ordinary skill.

Compounds such as 113 or 121 with a free 3-keto group may be converted to heterocyclic compounds by the methods illustrated in Scheme 5, as shown in FIG.5 (Hashem et al., J. Med. Chem., 19, 229, (1976); Kumar et al., J. Med. Chem., 36, 3278, (1993)). Ketone 133 may be converted to enol ether 135 (e.g., using methyl formate, sodium methoxide, THF) which may be transformed to pyrazole 137 (using e.g., R-NH-NH₂, acetic acid or methanol). Ketone 133 may also be converted to β-keto ester 139 (using e.g., diethylcarbonate, sodium methoxide, methyl iodide) which then can be reacted with a hydrazine derivative (i.e., R-NH-NH₂) to provide pyrazolone 141. Bromination of ketone 133 (e.g., bromine, chloroform) yields α-bromoketone 143, which upon reaction with a thiosulfide (i.e., R-S-S-NH₂) provides thiozole 145. Intermediate enol ether 135 upon reaction with hydroxylamine in the presence of acetic acid and sodium acetate is converted to oxazole 147. Isomeric oxazole 149 is produced when enol ether 135 is reacted with hydroxylamine under basic conditions.

Scheme 6, depicted in FIG.6, illustrates one possible synthetic route which may be used to prepare compounds of the invention. Wieland-Miescher ketone 151 may be treated with 2-methyl-2-ethyl-1,3-dioxolane ethylene glycol and p-toluenesulfonic acid to provide ketal 153, which may be formylated (using, e.g., sodium methoxide, methyl formate) to give enol 155. Enol 155 may be reacted with p-fluorophenylhydrazine in the presence of sodium acetate to provide the p-fluorophenyl pyrazole 157 which then may be deprotected (using, e.g., HCl, methanol, THF) to provide ketone 159. Ketone 159 may be converted to aldehyde 161 by Wittig reaction (using, e.g., potassium hexamethyl phosphazide, (methoxymethyl) triphenylphosphonium chloride) and hydrolysis of the intermediate enol ether (e.g., HCl). Nucleophilic addition of organolithium reagents to the aldehyde functionality may then provide alcohol 163.
Illustrated in Scheme 7, depicted in FIG. 7, is a synthetic pathway which may be used to prepare some non-pyrazole compounds. Wieland-Miescher ketone 161 may be converted to thixetal 165 (e.g., ethanedithiol, p-toluensulfonic acid, acetic acid) which can provide aldehyde 167 through Wittig reaction (e.g., potassium hexamethyldisilazide, (methoxymethyl)triphenylphosphonium chloride) and hydrolysis of the intermediate enol ether (e.g., HCl).

Addition of organolithium reagents to aldehyde 167 may be used to provide alcohol 169, which may be deprotected (e.g., MgClO₄, methanol/chloroform) to provide enone 171.

Preferably, R is

Those of ordinary skill in the art will recognize that enone 171 may be converted to compounds such as 163 illustrated in Scheme 6 through applications of the methods shown in Scheme 5.
Therapeutic Uses of the Compounds of the Invention

The compounds and/or compositions of the present invention may be used to treat diseases associated with either an excess or a deficiency of glucocorticoids in an organism (see e.g., Dow et al., International Publication No. WO 00/66522; Coughlan et al., International Publication No. WO 99/41257; Coughlan et al., International Publication No. WO 99/41256; Coughlan et al., International Publication No. WO 00/06317; Jones et al., International Publication No. WO 96/19458).

In accordance with the present invention, a compound and/or composition of the invention is administered to a patient, preferably a human, suffering from diseases mediated by the glucocorticoid receptor, which include but are not limited to, obesity, diabetes, depression, neurodegeneration or an inflammatory disease. Further, in certain embodiments, the compounds and/or compositions of the invention are administered to a patient, preferably a human, as a preventative measure against various diseases or disorders (see e.g., International Publication No. WO 00/66522, WO 99/41251, WO 00/06317, WO 96/19456). Thus, the compounds and/or compositions of the invention may be administered as a preventative measure to a patient having a predisposition which includes, but is not limited to, obesity, diabetes, depression, neurodegeneration or an inflammatory disease. Accordingly, the compounds and/or compositions of the invention may be used for the prevention of one disease or disorder and concurrently treating another (e.g., preventing depression and treating diabetes).

Procedures for treating diseases, which include but are not limited to, obesity, diabetes, depression, neurodegeneration or an inflammatory disease with prior art compounds have been described in the art (see references above). Thus, those of ordinary skill in the art may readily assay and use the compounds and/or compositions of structural Formulae (I), (II) and (III) to treat diseases, which include but are not limited to, obesity, diabetes, depression, neurodegeneration or an inflammatory disease.

Therapeutic/Propylactic Administration

The compounds and/or compositions of the invention may be advantageous used in human medicine. As previously described in the preceding section, compounds and compositions of the invention are useful for the treatment or
prevention of diseases, which include, but are not limited to, obesity, diabetes, depression, neurodegeneration or an inflammatory disease.

When used to treat or prevent disease or disorders, compounds and/or compositions of the invention may be administered or applied singly, or in combination with other agents. The compounds and/or compositions of the invention may also be administered or applied singly, or in combination with other pharmaceutically active agents, including other compounds and/or of the invention.

The present invention provides methods of treatment and prophylaxis by administration to a patient of a therapeutically effective amount of a composition and/or compound of the invention. The patient may be an animal, more preferably a mammal and most preferably a human.

The present compounds and/or compositions of the invention, which comprise one or more compounds of the invention, are preferably administered orally. The compounds and/or compositions of the invention may also be administered by any other convenient route, for example, by infusion or bolus injection, by absorption through epithelial or mucocutaneous linings (e.g., oral mucosa, rectal and intestinal mucosa, etc.). Administration can be systemic or local. Various delivery systems are known, (e.g., encapsulation in liposomes, microparticles, microcapsules, capsules, etc.) that can be used to administer a compound and/or composition of the invention.

Methods of administration include, but are not limited to, intradermal, intramuscular, intraperitoneal, intravenous, subcutaneous, intranasal, epidural, oral, sublingual, intranasal, intracerebral, intravaginal, transdermal, rectally, by inhalation, or topically, particularly to the ears, nose, eyes, or skin. The preferred mode of administration is left to the discretion of the practitioner, and will depend in part upon the site of the medical condition. In most instances, administration will result in the release of the compounds and/or compositions of the invention into the bloodstream.

In specific embodiments, it may be desirable to administer one or more compounds and/or composition of the invention locally to the area in need of treatment. This may be achieved, for example, and not by way of limitation, by local infusion during surgery, topical application, e.g., in conjunction with a wound dressing after surgery, by injection, by means of a catheter, by means of a suppository, or by means of an implant, said implant being of a porous, non-porous, or gelatinous material, including membranes, such as silastic membranes, or fibers.
In one embodiment, administration can be by direct injection at the site (or former site) of the disease.

In certain embodiments, it may be desirable to introduce one or more compounds and/or compositions of the invention into the central nervous system by any suitable route, including intraventricular, intrathecal and epidural injection. Intraventricular injection may be facilitated by an intraventricular catheter, for example, attached to a reservoir, such as an Omnyrea reservoir.

A compound and/or composition of the invention may also be administered directly to the lung by inhalation. For administration by inhalation, a compound and/or composition of the invention may be conveniently delivered to the lung by a number of different devices. For example, a Metered Dose Inhaler ("MDI"), which utilizes canisters that contain a suitable low boiling propellant, (e.g., dichlorodifluoromethane, trichlorofluoromethane, dichlorotetrafluoroethane, carbon dioxide or any other suitable gas) may be used to deliver compounds of the invention directly to the lung.

Alternatively, a Dry Powder Inhaler ("DPI") device may be used to administer a compound and/or composition of the invention to the lung. DPI devices typically use a mechanism such as a burst of gas to create a cloud of dry powder inside a container, which may then be inhaled by the patient. DPI devices are also well known in the art. A popular variation is the multiple dose DPI ("MDDPI") system, which allows for the delivery of more than one therapeutic dose. For example, capsules and cartridges of gelatin for use in an inhaler or insufflator may be formulated containing a powder mix of a compound of the invention and a suitable powder base such as lactose or starch for these systems.

Another type of device that may be used to deliver a compound and/or composition of the invention to the lung is a liquid spray device. Liquid spray systems use extremely small nozzle holes to aerosolize liquid drug formulations that may then be directly inhaled into the lung.

In one embodiment, a nebulizer is used to deliver a compound and/or composition of the invention to the lung. Nebulizers create aerosols from liquid drug formulations by using, for example, ultrasonic energy to form fine particles that may be readily inhaled (see e.g., Verschoyle et al., British J. Cancer, 80, Suppl. 2, 96, (1999), which is incorporated herein by reference). Examples of nebulizers include devices supplied by Sheffield/Systemic Pulmonary Delivery Ltd. (see, Armer et al.,
United States Patent No. 5,954,047; van der Linden et al., United States Patent No. 5,950,619; van der Linden et al., United States Patent No. 5,970,974; Avertis, and Batelle Pulmonary Therapeutics.

In another embodiment, an electrohydrodynamic ("EHD") aerosol device is used to deliver a compound and/or composition of the invention to the lung. EHD aerosol devices use electrical energy to aerosolize liquid drug solutions or suspensions (see e.g., Noakes et al., United States Patent No. 4,765,539). EHD aerosol devices may deliver drugs to the lung more efficiently than other pulmonary delivery technologies.

In another embodiment, the compounds of the invention can be delivered in a vehicle, in particular a liposome (see Langer, Science, 249:1527-1533, (1990); Treue et al., in "Liposomes in the Therapy of Infectious Disease and Cancer", Lopez-Berestein and Fidler (eds.), Liss, New York, pp. 353-365, (1989); see generally "Liposomes in the Therapy of Infectious Disease and Cancer", Lopez-Berestein and Fidler (eds.), Liss, New York, (1989)).

In yet another embodiment, the compounds of the invention can be delivered via sustained release systems, preferably oral sustained release systems. In one embodiment, a pump may be used (see Langer, supra; Seiden, CRC Crit. Rev. Biomed. Eng., 14:201, (1987); Saudek et al., New Engl. J. Med., 321:574, (1989)).

In yet another embodiment, a controlled-release system can be placed in proximity of the target of the compounds and/or composition of the invention, thus requiring only a fraction of the systemic dose (see, e.g., Goodson, in "Medical Applications of Controlled Release", supra, vol. 2, pp. 115-138 (1984)).
controlled-release systems discussed in Langer, Science, 249:1527-1533, (1990), may also be used.

Compositions of the Invention

The present compositions contain a therapeutically effective amount of one or more compounds of the invention, preferably in purified form, together with a suitable amount of a pharmaceutically acceptable vehicle, so as to provide the form for proper administration to a patient. When administered to a patient, the compounds of the invention and pharmaceutically acceptable vehicles are preferably sterile. Water is a preferred vehicle when the compound of the invention is administered intravenously. Saline solutions and aqueous dextrine and glycerol solutions can also be employed as liquid vehicles, particularly for injectable solutions. Suitable pharmaceutical vehicles also include excipients such as starch, glucose, lactose, sucrose, gelatin, malt, rice, flour, chalk, silica gel, sodium stearate, glycerol monostearate, talc, sodium chloride, dried skim milk, glycerol, propylene glycol, water, ethanol and the like. The present compositions, if desired, can also contain minor amounts of wetting or emulsifying agents or pH buffering agents. In addition, auxiliary, stabilizing, thickening, lubricating and coloring agents may be used.

Pharmaceutical compositions comprising a compound of the invention may be manufactured by means of conventional mixing, dissolving, granulating, drug-making, levigating, emulsifying, encapsulating, entrapping or lyophilizing processes. Pharmaceutical compositions may be formulated in conventional manner using one or more physiologically acceptable carriers, diluents, excipients or auxiliaries, which facilitate processing of compounds of the invention into preparations that may be used pharmacologically. Proper formulation is dependent upon the route of administration chosen.

The present compositions can take the form of solutions, suspensions, emulsion, tablets, pills, pellets, capsules, capsules containing liquids, powders, sustained-release formulations, suppository, emulsions, aerosols, sprays, suspensions, or any other form suitable for use. In one embodiment, the pharmaceutically acceptable vehicle is a capsule (see e.g., Grosswald et al., United States Patent No. 5,698,155). Other examples of suitable pharmaceutical vehicles have been described in the art (see Remington's Pharmaceutical Sciences, Philadelphia College of Pharmacy and Science, 17th Edition, 1985).
For topical administration, compounds of the invention may be formulated as solutions, gels, ointments, creams, suspensions, etc., as is well-known in the art.

Systemic formulations include those designed for administration by injection, e.g., subcutaneous, intravenous, intramuscular, intrathecal or intraperitoneal injection, as well as those designed for transdermal, transmucosal, oral or pulmonary administration. Systemic formulations may be made in combination with a further active agent that improves mucociliary clearance of airway mucus or reduces mucus viscosity. These active agents include, but are not limited to, sodium channel blockers, antibiotics, N-acetyl cysteine, homocysteine and phospholipids.

In a preferred embodiment, the compounds of the invention are formulated in accordance with routine procedures as a composition adapted for intravenous administration to human beings. Typically, compounds of the invention for intravenous administration are prepared as solutions in sterile isotonic aqueous buffer. For injection, a compound of the invention may be formulated in aqueous solutions, preferably in physiologically compatible buffers such as Hank's solution, Ringer's solution, or physiological saline buffer. The solution may contain formulatory agents such as suspending, stabilizing and/or dispersing agents. When necessary, the compositions may also include a solubilizing agent. Compositions for intravenous administration may optionally include a local anesthetic such as lignocaine to ease pain at the site of the injection. Generally, the ingredients are supplied either separately or mixed together in unit dosage form, for example, as a lyophilized powder or water free concentrate in a hermetically sealed container such as an ampoule or sachet indicating the quantity of active agent. When the compound of the invention is administered by infusion, it can be dispensed, for example, with an infusion bottle containing sterile pharmaceutical grade water or saline. When the compound of the invention is administered by injection, an ampoule of sterile water for injection or saline solution can be provided so that the ingredients may be mixed prior to administration.

For transmucosal administration, penetrants appropriate to the barrier to be permeated are used in the formulation. Such penetrants are generally known to one of ordinary skill in the art.

Compositions for oral delivery may be in the form of, for example, tablets, lozenges, aqueous or oily suspensions, granules, powders, emulsions, capsules, syrups, or elixirs. Orally administered compositions may optionally contain one or
more agents, for example, sweetening agents such as fructose, aspartame or saccharin; flavoring agents such as peppermint, oil of wintergreen, or cherry coloring agents and preserving agents, to provide a pharmaceutically palatable preparation. Moreover, when in tablet or pill form, the compositions may be coated to delay disintegration and absorption in the gastrointestinal tract, thereby providing a sustained action over an extended period of time. Selectively permeable membranes surrounding an osmotically active driving compound are also suitable for orally administered compounds of the invention. In these latter platforms, fluid from the environment surrounding the capsule is imbibed by the driving compound, which swells to displace the agent or agent composition through an aperture. These delivery platforms can provide an essentially zero order delivery profile as opposed to the spiked profiles of immediate release formulations. A time delay material such as glycerol monostearate or glycerol stearate may also be used. Oral compositions can include standard vehicles such as mannitol, lactose, starch, magnesium stearate, sodium saccharine, cellulose, magnesium carbonate, and the like. Such vehicles are preferably of pharmaceutical grade.

For oral liquid preparations such as, for example, suspensions, elixirs and solutions, suitable carriers, excipients or diluents include water, saline, alkanolglycols (e.g., propylene glycol), polyalkylene glycols (e.g., polyethylene glycol) oils, alcohols, slightly acidic buffers between pH 4 and pH 6 (e.g., acetate, citrate, ascorbate at between about 5.0 mM to about 50.0 mM, etc). Additionally, flavoring agents, preservatives, coloring agents, bile salts, acyl carnitines and the like may be added.

For buccal administration, the compositions may take the form of tablets, lozenges, etc., formulated in conventional manner.

Liquid drug formulations suitable for use with nebulizers and liquid spray devices and EHD aerosol devices will typically include a compound of the invention with a pharmaceutically acceptable vehicle. Preferably, the pharmaceutically acceptable vehicle is a liquid such as alcohol, water, polyethylene glycol or a perfluorocarbon. Optionally, another material may be added to alter the aerosol properties of the solution or suspension of compounds of the invention. Preferably, this material is liquid such as an alcohol, glycol, polyglycol or a fatty acid. Other methods of formulating liquid drug solutions or suspension suitable for use in aerosol
devices are known to those of skill in the art (see e.g., Biesalski, United States Patent No. 5,112,598; Biesalski, United States Patent No. 5,556,611).

A compound of the invention may also be formulated in rectal or vaginal compositions such as suppositories or retention enemas, e.g., containing conventional suppository bases such as cocoa butter or other glycerides.

In addition to the formulations described previously, a compound of the invention may also be formulated as a depot preparation. Such long acting formulations may be administered by implantation (for example, subcutaneously or intramuscularly) or by intramuscular injection. Thus, for example, a compound of the invention may be formulated with suitable polymeric or hydrophobic materials (for example, as an emulsion in an acceptable oil) or ion exchange resins, or as sparingly soluble derivatives, for example, as a sparingly soluble salt.

When a compound of the invention is acidic, it may be included in any of the above-described formulations as the free acid, a pharmaceutically acceptable salt, a solvate or hydrate. Pharmaceutically acceptable salts substantially retain the activity of the free acid, may be prepared by reaction with bases and tend to be more soluble in aqueous and other protic solvents than the corresponding free acid form.

Methods of Use and Doses

A compound of the invention and/or compositions thereof, will generally be used in an amount effective to achieve the intended purpose. For use to treat or prevent diseases or disorders such as obesity, diabetes, depression, neurodegeneration or an inflammatory disease, the compounds of the invention and/or compositions thereof, are administered or applied in a therapeutically effective amount.

The amount of a compound of the invention that will be effective in the treatment of a particular disorder or condition disclosed herein will depend on the nature of the disorder or condition and can be determined by standard clinical techniques known in the art as previously described. In addition, \textit{in vitro} or \textit{in vivo} assays may optionally be employed to help identify optimal dosage ranges. The amount of a compound of the invention administered will, of course, be dependent on, among other factors, the subject being treated, the weight of the subject, the severity of the affliction, the manner of administration and the judgment of the prescribing physician.
For example, the dosage may be delivered in a pharmaceutical composition by a single administration, by multiple applications or controlled release. In a preferred embodiment, the compounds and/or compositions of the invention are delivered by oral sustained release administration. Preferably, in this embodiment, the compounds and/or compositions of the invention are administered twice per day (more preferably, once per day). Dosing may be repeated intermittently, may be provided alone or in combination with other drugs and may continue as long as required for effective treatment of the disease state or disorder.

Suitable dosage ranges for oral administration are dependent on the potency of the compound of the invention, but are generally about 0.001 mg to about 200 mg of a compound of the invention per kilogram body weight. Dosage ranges may be readily determined by methods known to the skilled artisan.

Suitable dosage ranges for intravenous (i.v.) administration are about 0.01 mg to about 100 mg per kilogram body weight. Suitable dosage ranges for intranasal administration are generally about 0.01 mg/kg body weight to about 1 mg/kg body weight. Suppositories generally contain about 0.01 milligram to about 50 milligrams of a compound of the invention per kilogram body weight and comprise active ingredient in the range of about 0.5% to about 10% by weight. Recommended dosages for intradermal, intramuscular, intraperitoneal, subcutaneous, epidural, sublingual or intracerebral administration are in the range of about 0.001 mg to about 200 mg per kilogram of body weight. Effective doses may be extrapolated from dose-response curves derived from in vitro or animal model test systems. Such animal models and systems are well known in the art.

The compounds of the invention are preferably assayed in vitro and in vivo, for the desired therapeutic or prophylactic activity, prior to use in humans. For example, in vitro assays can be used to determine whether administration of a specific compound of the invention or a combination of compounds of the invention is preferred for reducing convulsion. The compounds of the invention may also be demonstrated to be effective and safe using animal model systems.

Preferably, a therapeutically effective dose of a compound of the invention described herein will provide therapeutic benefit without causing substantial toxicity. Toxicity of compounds of the invention may be determined using standard pharmaceutical procedures and may be readily ascertained by the skilled artisan. The dose ratio between toxic and therapeutic effect is the therapeutic index. A compound
of the invention will preferably exhibit particularly high therapeutic indices in treating
disease and disorders. The dosage of a compound of the inventions described herein
will preferably be within a range of circulating concentrations that include an
effective dose with little or no toxicity.

5

**Combination Therapy**

In certain embodiments, the compounds of the invention can be used in
combination therapy with at least one other therapeutic agent. The compound of the
invention and the therapeutic agent can act additively or, more preferably,
synergistically. In a preferred embodiment, a compound of the invention is
administered concurrently with the administration of another therapeutic agent. In
another preferred embodiment, a composition comprising a compound of the
invention is administered concurrently with the administration of another therapeutic
agent, which can be part of the same composition as the compound of the invention or
a different composition. In another embodiment, a composition comprising a
compound of the invention is administered prior to or subsequent to, administration of
another therapeutic agent. Other therapeutic agents which may be used with the
compounds and/or compositions of the invention, include but are not limited to, drugs
used to treat neurodegenerative diseases such as Alzheimer’s or Parkinson’s disease,
anxiety, depression, psychosis, diabetes, obesity, etc. (see, e.g., Dow et al.,
International Publication No. WO 00/66522).

**EXAMPLES**

The invention is further defined by reference to the following examples, which
describe in detail preparation of compounds and compositions of the invention and
assays for using compounds and compositions of the invention. It will be apparent to
those of ordinary skill in the art that many modifications, both to materials and
methods, may be practiced without departing from the scope of the invention.

All synthetic reactions were performed under an argon atmosphere unless
otherwise noted. THF was purified by distillation from sodium benzophenone ketyl
before use. All other anhydrous reagents were purchased from Aldrich Chemical Co.
Proton and carbon-13 nuclear magnetic resonance spectra (1H NMR, 13C NMR) were
obtained on a Varian INOVA-400 (400 MHz) instrument; 1H NMR chemical shifts
are reported as δ values in parts per million (ppm) downfield from internal
tetramethylsilane; $^{13}$C NMR chemical shifts are reported as δ values with reference to the solvent peak (CDCl$_3$ or DMSO). High resolution mass spectrometry (HR-MS) was performed by the National Bioorganic and Biomedical Mass Spectrometry Resource at the University of California, San Francisco.

Example 1: Preparation of 5,5-(Ethyleneoxy)-4a-methyl-2,3,4,4a,5,6,7,8-octahydronaphthalene-2-one (201)

A mixture of Wieland-Miescher ketone (5.086 g, 28.44 mmol), 2-methyl-2-ethyl-1,3-dioxolane (19.38 mL, 155.0 mmol), ethylene glycol (0.358 mL, 6.43 mmol) and p-toluenesulfonic acid monohydrate (0.4 g, 2.13 mmol) was stirred at room temperature for 30 hours. The reaction was quenched with dropwise addition of triethylamine, diluted with 20 mL of benzene, washed with water, dried over MgSO$_4$, and concentrated under vacuum. The product was triturated from hexanes to yield monoacetate 201 (5.92 g, 94%). $^1$H NMR (CDCl$_3$) δ 1.36 (s, 3H), 1.6-2.0 (m, 5H), 2.2-2.5 (m, 5H), 3.9-4.1 (m, 4H), 5.80 (d, J= 17 Hz, 1H); $^{13}$C NMR (CDCl$_3$) 198.91, 167.55, 125.38, 125.37, 112.12, 65.16, 64.84, 44.81, 33.70, 31.22, 29.81, 26.62, 21.51, 20.27.

Example 2: 5,5-(Ethyleneoxy)-3-Hydroxyethylene-4a-methyl-4,4a,5,6,7,8-hexahydro-3H-naphthalene-2-one (203)

A solution of 201 (20 g, 0.090 mmol) in THF (200 mL) was cooled to -5°C in an ice/methanol bath. NaOMe (19.45 g, 0.360 mol) was added and the mixture stirred for 30 minutes. After slow addition of a cooled solution of methyl formate (55.5 mL, 0.900 mol) in 60 mL THF, the mixture was stirred at room temperature for 24 hours. The mixture was poured into ice-water-HCl (~50 mL conc. HCl in 500 mL H$_2$O), stirred for 5 minutes and then transferred to a separatory funnel. The aqueous layer was extracted with ether (3 x 100 mL) and the pooled organic extracts were washed with brine, dried (MgSO$_4$), and concentrated. The yellow residue was flash chromatographed (0-50% EtOAc-hexanes) to yield 203 (5.88 g, 26%) as a yellow oil. $^1$H NMR (CDCl$_3$) δ 1.22 (s, 3H), 1.6-1.9 (m, 4H), 2.02 (d, J=14 Hz, 1H), 2.2-2.5 (2H), 2.91 (d, J=14 Hz, 1H), 3.9-4.1 (m, 4H), 5.86 (d, J=2.0 Hz, 1H), 7.37 (s, 1H); $^{13}$C NMR (CDCl$_3$) 188.72, 166.86, 165.35, 165.12, 124.59, 124.25, 111.92, 106.39, 65.33, 65.17, 65.04, 64.89, 46.00, 29.87, 21.33, 20.74, 20.59.
Example 3: 1-(4-Fluoro-phenyl)-4a-methyl-4,4a,5,6,7,8-hexahydro-benzof[1,2-d]azol-5-one (285)

In a 250 mL round bottom flask fitted with a Dean-Stark trap and condenser, a mixture of 203 (3.88 g, 23.5 mmol), 4-fluorophenylhydrazine hydrochloride (3.93 g, 24.2 mmol), sodium acetate (1.99 g, 24.2 mmol), and 2 mL glacial acetic acid in 150 mL benzene was heated to reflux for 1 hour. During this time ~1.2 mL of H₂O was collected. Solvents were then evaporated and the dark residue was dissolved in ether, filtered, and concentrated to afford 8.4 g of a dark brown oil.

A mixture of this oil, 1 N HCl (25 mL), glacial acetic acid (50 mL) and THF (75 mL) was stirred at room temperature for 48 hours. The reaction was quenched with a saturated NaHCO₃ solution. The aqueous layer was extracted with ether (4 x 50 mL), washed twice with saturated NaHCO₃, brine, and then dried (MgSO₄), and concentrated. The residue was triturated with boiling hexanes and the combined triturates were recrystallized from EtOH to afford 3.5 g of 205 as an orange powder.

Flash chromatography (0-50% EtOAc/hexanes) of the remaining residue afforded an overall yield of 5.67 g (81% over two steps). ¹H NMR (CDCl₃) δ 1.25 (s, 3H), 1.60-1.75 (m, 1H), 2.00-2.15 (m, 1H), 2.5-2.73 (m, 4H), 2.9 (d, J=3 Hz, 2H), 6.29 (d, J=2 Hz, 1H), 7.17 (t, J=8.4 Hz, 2H), 7.43-7.50 (m, 3H). ¹³C NMR (CDCl₃) 121.57, 162.71, 160.25, 145.79, 138.45, 135.97, 135.75, 135.71, 125.29, 125.21, 116.17, 115.94, 114.11, 110.80, 50.68, 38.55, 31.56, 28.20, 23.30, 22.71; HR-MS calculated for C₉H₁₂FNGO: 296.1325, found: 296.1320.

Compound 205 gave an IC₅₀ of 436 nM in a GR binding assay.

Example 4: 1-(4-Fluoro-phenyl)-4a-methyl-4,4a,5,6,7,8-hexahydro-benzof[1,2-d]azol-5-carboxaldehyde (297)

To a cold (~30 °C) solution of (methoxymethyl)triphenylphosphonium chloride (13.85 g, 40.4 mmol) in THF (40 mL), was added KHMS (0.5M in toluene, 70.8 mL, 35.4 mmol). The resulting red solution was stirred at 0 °C for 15 minutes before being treated with a solution of 205 (3 g, 10.1 mmol) in THF (40 mL). The mixture was stirred at room temperature for 24 hours. A solution of methanol in THF (1:1, 40 mL) and 4 N HCl (30 mL) was added to the mixture at 0 °C. The resulting solution was allowed to stir at room temperature for 26 hours and was then poured into water (50 mL) and extracted with ether (4 x 50 mL). The combined organic
layers were washed with brine, dried (MgSO₄), and concentrated. Purification of the residue by flash chromatography on silica gel (0 – 50% ethyl acetate-hexanes) gave 2.2 g (70%) of 207 as a yellow solid. A small portion was further purified via bisulfite addition for characterization. ¹H NMR (CDCl₃) δ 1.12 (s, 3H), 1.35-1.49 (m, 1H), 1.67-1.8 (m, 2H), 2.28-2.48 (m, 3H), 2.9 (d, J=16.0 Hz, 1H), 3.1 (d, J=16.0 Hz, 1H), 6.18 (s, 1H), 7.16 (t, J=8.5 Hz, 2H), 7.42-7.48 (m, 2H), 9.90 (d, J=2.0 Hz, 1H); ¹³C NMR (CDCl₃) 202.99, 162.64, 160.18, 147.26, 137.77, 136.35, 135.65, 135.62, 125.36, 125.32, 125.24, 116.09, 115.87, 113.36, 109.93, 60.78, 39.90, 34.55, 32.10, 24.52, 22.82, 18.86.

**Example 5: Preparation of 3-Bromo-4-phenoxyltrisopropyl-silane (209)**

A mixture of 3-bromophenol (1.00 g, 5.78 mmol), and imidazole (984 mg, 14.45 mmol) in 6 mL of DMF was cooled to 0°C and trisopropylsilyl chloride (922 µL, 6.94 mmol) was added and the solution was stirred for 24 hours. The reaction mixture was quenched with 10 mL H₂O and 5 mL saturated aqueous NaHCO₃. The aqueous layer was extracted with ether (3 x 10 mL), the pooled organic extracts were washed with brine, dried (MgSO₄), and concentrated. The resulting oil was flash chromatographed on silica gel with hexanes to yield 209 (1.50 g, 79%); ¹H NMR (CDCl₃) δ 1.09 (d, J=7.2 Hz, 18H), 1.17-1.30 (m, 3H), 6.75-6.81 (m, 1H), 7.00-7.10 (m, 3H); ¹³C NMR (CDCl₃) 156.89, 130.26, 124.14, 123.29, 122.5, 118.47.

**Example 6: (4-Bromo-2,5-dimethyl-phenoxyl)-trisopropyl-silane (211)**

Following the procedure of Example 5 but substituting 4-bromo-2,5 dimethyl phenol for 3-bromophenol provided 211 in 93% yield. ¹H NMR (CDCl₃) δ 1.22 (d, J=6.0 Hz, 18H), 1.37 (m, 3H), 2.46 (s, 6H), 6.75 (s, 2H); ¹³C NMR (CDCl₃) 154.54, 138.81, 119.65, 23.85, 17.92, 12.71.

**Example 7: (4-Bromo-phenoxyl)-trisopropyl-silane (213)**

Following the procedure of Example 5 but substituting 4-bromophenol for 3-bromophenol provided 213 in 94% yield. ¹H NMR (CDCl₃) δ 1.09 (d, J=6.8 Hz), 1.23 (quint, J=7.6 Hz, 3H), 6.74 (d, J=8.0 Hz, 2H), 7.28 (d, J=8.0 Hz, 2H); ¹³C NMR (CDCl₃) 155.17, 132.19, 121.56, 113.24, 17.83, 15.59.
Example 8: (4-Iodo-2-methyl-phenoxy)-triisopropyl-silane (215)

Following the procedure of Example 5 but substituting 4-iodo-2-methylphenol for 3-bromophenol provided 215 in 57% yield. 1H NMR (CDCl3) δ 1.09 (d, J=8.0 Hz, 18H), 1.26 (sext, J=8.0 Hz, 3H), 2.18 (s, 3H), 6.53 (d, J=8.4 Hz, 1H), 7.30 (d, J=8.4 Hz, 1H), 7.40 (s, 1H). 13C NMR (CDCl3) 154.23, 139.35, 135.36, 131.58, 119.93, 82.88, 17.97, 17.58, 16.67, 12.93.

Example 9: 4-Bromo-2,6-dimethoxy-phenol (217)

To a 500 mL flask fitted with a condenser, 2,6-dimethoxyphenol (10 g, 64.86 mmol) and 80 mL of anhydrous CHCl3 was added. The solution was cooled to −40 °C and NaH (60% dispersion in mineral oil, 26 mg, 0.65 mmol) was added. Another 20 mL of anhydrous CHCl3 was added followed by rapid addition of N-bromosuccinimide (12.77 g, 71.35 mmol). The reaction mixture was stirred for 1 hour at −35 °C, heated to room temperature over the next 30 minutes and heated to reflux for another 30 minutes. The solvent was evaporated under vacuum overnight. The tan solid was stirred with 100 mL ether, the mixture was filtered, and the residue was washed with ether. The solvent was evaporated under vacuum to yield a tan solid, which was then dissolved in boiling hexanes. The solution was decanted from the brown oil and filtered through a pre-heated celite pad into a heated flask. The light yellow solution was allowed to cool at room temperature for 3 hours. White wooly needles were filtered off and dried to yield 217 (3.22 g, 22%). 1H NMR (CDCl3) δ 6.72 (s, 2H), 5.44 (s, 1H), 3.88 (s, 6H). 13C NMR (CDCl3) 147.47, 133.93, 110.88, 108.38, 56.33.

Example 10: 5-Bromo-1,2,3-trimethoxy-benzene (219)

A mixture of 5-bromo-1,2,3 trihydroxybenzene (1.3 g, 5.63 mmol) and 1M NaOH (14 mL) was cooled to 10 °C and dimethyl sulfate (800 μL, 16.89 mmol) was added. This mixture was heated at reflux for 3 hours and another portion of dimethyl sulfate (800 μL) was added. The mixture was heated at reflux for another 3 hours. The mixture was cooled overnight, and a gray solid was filtered off, which was then dissolved in ~50 mL ether, washed with 5% NaOH-H2O, water (2x), brine, then dried (MgSO4), and concentrated to yield 219 (1.29 g, 76%). 1H NMR (CDCl3) δ 6.72 (s, 2H, 25.68).
Example 11: 3a-7a-Dihydro-benzof[\beta]thiophen-3-yl-[1-(4-fluoro-phenyl)-4a-methyl-4,6,7,8-hexahydro-1H-benzo[b]furan-5-yl]-methanol (221)

A solution of 3-bromo-benzof[\beta]thiophene (86.2 µL, 0.659 mmol) in 5 mL anhydrous diethyl ether was cooled to -8 °C and tert-butyl lithium (1.7M in pentane, 775 µL, 1.318 mmol) was added and the mixture was stirred for 15 minutes at -78 °C and then 2 hours at room temperature. Aldehyde 207, dissolved in 10 mL of ether was added dropwise over 10 minutes at -30 °C and the mixture was stirred for 0.5 hours. The reaction was quenched with dropwise addition of saturated aqueous NH₄Cl. The aqueous layer was extracted with ether (3 x 10 mL) and the combined organic extracts were washed with saturated aqueous NaHCO₃, brine, dried (MgSO₄), and concentrated. The residue was purified by flash chromatography (20% EtOAc-hexanes), followed by preparative TLC (25% EtOAc-hexanes) to yield 221 (18.1 mg, 32%) as a mixture of isomers. Fraction A: 1H NMR (CDCl₃) δ 1.27 (s, 3H), 1.70-1.92 (m, 3H), 1.97 (m, 1H), 2.25-2.5 (m, 3H), 2.74 (d, J=15.2 Hz, 1H), 3.14 (d, J=15.2 Hz, 1H), 3.41 (d, J=1.6 Hz, 1H), 5.44 (d, J=5.2 Hz, 1H), 6.13 (d, J=2.0 Hz, 1H), 7.16 (d, J=8.4 Hz, 2H), 7.21 (s, 1H), 7.27-7.37 (m, 2H), 7.42-7.50 (m, 3H), 7.72 (d, J=8.0 Hz, 1H), 7.80 (d, J=6.0 Hz, 1H); HR-MS calculated for C₂₅H₂₅FN₄O₂S: 444.1672, found: 444.1675. Fraction B: 1H NMR (CDCl₃) δ 1.27 (s, 3H), 1.80-2.10 (m, 4H), 2.20-2.50 (m, 3H), 2.58-2.65 (m, 1H), 3.04 (t, J=15.2 Hz, 2H), 3.19 (d, J=15.2 Hz, 1H), 3.41 (d, J=1.6 Hz, 2H), 3.63 (d, J=4.4 Hz, 1H), 6.12 (s, 1H), 7.11-7.18 (m, 2H), 7.35-7.48 (m, 4H), 7.49 (s, 1H), 7.80 (d, J=5.2 Hz, 2H).

Example 12: 1-(4-Fluoro-phenyl)-4a-methyl-4,6,7,8-hexahydro-1H-benzo[b]furan-5-yl-[3,4,5-trimethoxy-phenyl]-methanol (223)

Following the procedure of Example 11 but substituting 5-bromo-1,2,3-trimethoxy-benzene for 3-bromo-benzof[\beta]thiophene gave 223. 1H NMR (CDCl₃) δ 1.26 (s, 3H), 1.60-1.90 (m, 4H), 2.00-2.20 (m, 2H), 2.24-2.47 (m, 2H), 2.73 (d, J=15.2 Hz, 1H), 3.12 (d, J=15.2 Hz, 1H), 3.80-3.90 (m, 9H), 5.10 (s, 1H), 6.12 (s, 1H), 6.50-6.60 (m, 2H), 7.10-7.20 (m, 2H), 7.40-7.50 (m, 2H); 13C NMR (CDCl₃): HR-MS calculated for C₂₉H₂₃FN₄O₇: 478.2268, found: 478.2261.
Example 13: 4-[[1-[(4-Fluoro-phenyl)-4a-methyl-4,4a,5,6,7,8-hexahydro-1H-benzo[f]indazol-5-yl]-hydroxy-methyl]-3,5-dimethyl-phenol (227)

Following the procedure of Example 11, but substituting 4-bromo-3,5-

dimethyl-phenoxy)-trisopropylsilane for 3-bromo-benzothiophene gave the
trisopropylsilyl ether of 4-[[1-[(4-Fluoro-phenyl)-4a-methyl-4,4a,5,6,7,8-hexahydro-
1H-benzo[f]indazol-5-yl]-hydroxy-methyl]-3,5-dimethyl-phenol (225). The silyl ether
225 (118.2 mg, 0.201 mmol) was dissolved in 2.5 mL THF and cooled to −78 °C.
Tetrabutylammonium fluoride (1M in THF, 273 μL, 0.273 mmol) was added
dropwise and the solution stirred for 15 minutes. The reaction was quenched with 5
mL H₂O. The aqueous phase was extracted with ether (4x 5mL) and the pooled
organic extracts were washed with brine, dried (MgSO₄), and concentrated. The
residue was purified by flash chromatography over silica gel (0-2% MeOH-CHCl₃)
and then the off-white solid product was washed with methanol to yield 227 (56 mg,
64%) as a white solid. ¹H NMR (DMSO) δ 1.20 (s, 3H), 1.50-1.80 (m, 4H), 2.34 (s,
6H), 2.61 (d, J=15.2 Hz, 1H), 2.94 (d, J=15.2 Hz, 1H), 4.0 (s, 2.5H), 5.26 (d, J=2.8
Hz, 1H), 6.15 (s, 1H), 6.30 (s, 2H), 7.32 (t, J=8.8 Hz), 7.43 (s, 1H), 7.51 (t, J=8.8 Hz,
2H); ¹³C NMR (DMSO) 161.96, 159.54, 154.92, 151.55, 137.86, 136.32, 153.87,
132.34, 125.24, 125.16, 116.34, 116.11, 113.86, 108.29, 69.66, 52.89, 33.25, 32.55,

Example 14: 4-[[1-[(4-Fluoro-phenyl)-4a-methyl-4,4a,5,6,7,8-hexahydro-1H-
benzo[f]indazol-5-yl]-hydroxy-methyl]-3,5-dimethyl-phenol (228)

The trisopropylsilyl ether of 4-[[1-[(4-Fluoro-phenyl)-4a-methyl-4,4a,5,6,7,8-
hexahydro-1H-benzo[f]indazol-5-yl]-hydroxy-methyl]-3,5-dimethyl-phenol (160 mg,
0.17 mmol) was dissolved in 8 mL CH₂Cl₂. Pyridinium chlorochromate (55 mg,
0.255 mmol) was added to the solution, which was stirred for 4.5 hours at room
temperature under argon. 20 mL diethyl ether was added to the mixture and volatiles
were removed under vacuum. The residue was purified by flash chromatography
(10% EtOAc-hexanes) to yield the silyl ether of 1 (58.7 mg, 59%) of a clear oil. This
oil (58.7 mg, 0.10 mmol) was dissolved in 6 mL THF and cooled to −78 °C.
Tetrabutylammonium fluoride (1M in THF, 140 μL, 0.14 mmol) was added dropwise
and the solution stirred for 15 minutes. The reaction was quenched with 5 mL H₂O.
The aqueous phase was extracted with ether (4× 5mL) and the pooled organic extracts were washed with brine, dried (MgSO₄), and concentrated. The residue was purified by flash chromatography over silica gel (10-20% ethyl acetate—benzene) to yield **238** (45 mg, 100%). ¹H NMR (CDCl₃) δ 1.31 (s, 3 H) 1.41 (m, 1 H) 1.87 (m, 3 H) 2.23 (s, 6 H) 2.31 (d, J=15.14 Hz, 1 H) 2.43 (m, 1 H) 2.62 (d, J=16.11 Hz, 1 H) 3.04 (m, 1 H) 3.15 (d, J=15.63 Hz, 1 H) 6.12 (s, 1 H) 6.44 (s, 2 H) 7.14 (t, J=8.55 Hz, 2 H) 7.36 (s, 1 H) 7.39 (s, 1 H) 7.43 (dd, J=8.79, 4.88 Hz, 2 H); ¹³C NMR (CDCl₃) 18.33, 20.48, 25.30, 26.11, 32.48, 33.76, 41.81, 61.53, 109.41, 113.94, 115.26, 116.04, 116.27, 125.57, 125.66, 128.32, 134.57, 135.35, 135.38, 135.91, 136.76, 137.79, 149.43, 156.49, 160.39, 210.97.

**Example 15**: 4-[[1-(4-Fluoro-phenyl)-4a-methyl-4,4a,5,6,7,8-hexahydro-1H-benzof[1,4]benzoxazepin-5-yl]-methoxy-methyl]-3,5-dimethyl-phenol (230)

The trisopropylsilyl ether of 4-[[1-(4-Fluoro-phenyl)-4a-methyl-4,4a,5,6,7,8-hexahydro-1H-benzof[1,4]benzoxazepin-5-yl]-methoxy-methyl]-3,5-dimethyl-phenol (20 mg, 0.034 mmol) was dissolved in 3 mL CH₂Cl₂ and cooled to −78 °C. Triethylamine (16 μL, 0.102 mmol) and boron trifluoride etherate (19 μL, 0.153 mmol) were added and the solution was stirred for 6 h at room temperature under an argon atmosphere. The reaction was quenched with 2 mL saturated aqueous sodium bicarbonate and extracted with ether (4× 5 mL), dried (MgSO₄), and concentrated to yield 23.3 mg of a white solid. The silyl ether of 230 was then deprotected following the procedure of Example 14 to yield **230** (16.2 mg, 95%). ¹H NMR (CDCl₃) δ 1.04 (s, 3 H) 1.10 (d, J=12.70 Hz, 1 H) 1.16 (m, 1 H) 1.30 (m, 2 H) 1.67 (m, 2 H) 2.21 (d, J=5.37 Hz, 6 H) 2.29 (m, 1 H) 2.48 (m, 1 H) 2.70 (m, 2 H) 3.07 (d, J=15.14 Hz, 1 H) 4.94 (s, 2 H) 6.06 (d, J=1.95 Hz, 1 H) 6.44 (s, 2 H) 7.08 (t, J=8.55 Hz, 2 H) 7.39 (s, 3 H); ¹³C NMR (CDCl₃) 12.29, 12.70, 17.42, 17.70, 17.98, 20.90, 26.23, 26.66, 28.61, 33.39, 33.80, 41.63, 49.36, 109.19, 114.09, 115.11, 115.94, 116.16, 125.40, 125.48, 128.32, 129.57, 135.76, 137.01, 137.93, 138.24, 138.37, 150.74, 153.41, 160.26, 162.71.

**Example 16**: 4-[[1-(4-Fluoro-phenyl)-4a-methyl-4,4a,5,6,7,8-hexahydro-1H-benzof[1,4]benzoxazepin-5-yl]-methoxy-methoxy-methyl]-3,5-dimethyl-phenol (232)

The trisopropylsilyl ether of 4-[[1-(4-Fluoro-phenyl)-4a-methyl-4,4a,5,6,7,8-hexahydro-1H-benzof[1,4]benzoxazepin-5-yl]-methoxy-methyl]-3,5-dimethyl-phenol (50 mg, 0.085 mmol) was dissolved in 10 mL CH₂Cl₂. Diisopropylethylamine (222 μL, 41
1.275 mmol) and methoxymethyl chloride (65 μL, 0.850 mmol) were added and the solution was stirred at room temperature for 10h. The mixture was diluted with 30 mL ethyl acetate. The organic phase was washed with brine, dried (Na₂SO₄), and concentrated to yield 96.3 mg of the silyl ether of 232. This was then deprotected following the procedure of Example 14 to yield 232 (12.4 mg, 59%).

**1H NMR**
(CDCl₃) δ 1.20 (s, 3 H), 1.29 (m, 2 H), 1.63 (m, 2 H), 1.89 (d, J=13.16 Hz, 1 H), 2.14 (m, 2 H), 2.88 (d, J=14.65 Hz, 1 H), 2.96 (s, 3 H), 2.99 (s, 3 H), 3.39 (s, 2 H), 4.43 (s, 2 H), 5.11 (d, J=6.35 Hz, 1 H), 6.08 (s, 1 H), 6.31 (m, 1 H), 6.47 (s, 2 H), 7.13 (t, J=7.81 Hz, 2 H), 7.36 (d, J=1.95 Hz, 2 H), 7.43 (d, J=6.84, 4.68 Hz, 2 H); 13C NMR (CDCl₃) 19.30, 21.22, 21.58, 24.29, 26.24, 33.22, 33.33, 42.16, 52.01, 56.32, 74.08, 93.81, 108.73, 114.12, 115.40, 115.96, 116.19, 117.31, 125.35, 125.43, 128.33, 129.41, 135.62, 135.65, 136.78, 137.88, 138.41, 139.84, 151.68, 154.70, 160.25, 162.71.

**Example 17: Binding data for compounds 227, 228, 230 and 232**

Representative results of glucocorticoid receptor (GR) binding data for 4-[[1-(4-Fluoro-phenyl)-4a-methyl-4,4a,5,6,7,8-hexahydro-1H-benzo[6,9]anthracen-5-yl]-methyl]-3,5-dimethyl-phenol and certain derivatives are shown in Table 1, compared to dexamethasone.

**Example 18: 2-[[1-(4-Fluoro-phenyl)-4a-methyl-4,4a,5,6,7,8-hexahydro-1H-benzo[6,9]anthracen-5-yl]-hydroxy-methyl]-phenol (229)**

Following the procedure of Example 11 but substituting 3-bromo-phenoxy-trisopropylsilane for 3-bromo-benzo[d]thiophene gave the trisopropylsilyle ether of 3-[[1-(4-Fluoro-phenyl)-4a-methyl-4,4a,5,6,7,8-hexahydro-1H-benzo[6,9]anthracen-5-yl]-hydroxy-methyl]-phenol 229, which was then deprotected following the procedure of
Example 13.  $^1$H NMR (CDCl$_3$) δ 1.14 (s, 5H), 1.18-1.30 (m, 7H), 1.36 (s, 1H), 1.5-1.7 (m, 5H), 1.8-1.95 (m, 2H), 2.20-2.32 (m, 5H), 2.60 (d, J=15.9 Hz, 0.5H), 2.71 (d, J=15.4 Hz, 0.5H), 2.78 (d, J=16.2 Hz, 1H), 2.98 (s, 1H), 3.17 (t, J=15.6 Hz, 1H), 3.65 (d, J=16.2 Hz, 1H), 4.56 (d, J=8.9 Hz, 1H), 4.99 (s, 0.5H), 5.09 (s, 0.5H), 6.09 (s, 0.3H), 6.11 (s, 0.3H), 6.13 (s, 1H), 6.15 (s, 0.4H), 6.7-6.9 (m, 6H), 7.1-7.22 (m, 5H), 7.4-7.5 (m, 5H); $^{13}$C NMR (CDCl$_3$) 162.66, 160.22, 156.34, 155.97, 151.06, 147.46, 146.72, 138.20, 137.89, 137.44, 136.78, 135.61, 129.68, 129.58, 129.48, 125.38, 125.20, 125.18, 119.24, 117.67, 116.30, 116.16, 115.93, 115.45, 115.04, 114.72, 114.05, 113.73, 112.72, 109.53, 109.46, 72.40, 71.91, 65.86, 56.53, 53.94, 53.30, 50.70, 49.39, 41.52, 41.46, 41.29, 40.89, 35.79, 33.83, 30.30, 28.70, 27.57, 27.07, 25.34, 25.16, 23.59, 22.64, 21.33, 20.58, 17.84, 17.67, 15.22.

Example 19: 4-[[4-(Fluoro-phenyl)-4a-methyl-4,5,6,7,8-hexahydro-1H-benzof[1,2,3]triazol-5-yl]-hydroxy-methyl]-phenol (231)

Following the procedure of Example 11 but substituting 4-bromo-phenoxo-trispropylsilane for 3-bromo-benzof[1]thiophene gave the trispropylsilyl ether of 4-[[4-(fluoro-phenyl)-4a-methyl-4,5,6,7,8-hexahydro-1H-benzof[1,2,3]triazol-5-yl]-hydroxy-methyl]-phenol (231) which was then deprotected following the procedure of Example 13. $^1$H NMR (MeOD) δ 1.00-1.13 (m, 12H), 1.24 (s, 3H), 1.26-1.40 (m, 3H), 1.55-2.00 (m, 7H), 2.25-2.50 (m, 4H), 2.65-2.80 (m, 2H), 3.20 (d, J=15.9 Hz, 1H), 3.65 (d, J=15.9 Hz, 1H), 5.07 (s, 1H), 5.48 (s, 0.5H), 6.07-6.17 (m, 1.5H), 6.71-6.80 (m, 2H), 7.17 (t, J=8.6 Hz, 3H), 7.26 (t, J=8.6 Hz, 3H), 7.39-7.49 (m, 4H); $^{13}$C NMR (CDCl$_3$) 162.66, 160.20, 150.74, 149.99, 149.94, 144.08, 143.27, 138.26, 138.03, 137.99, 137.17, 136.71, 136.43, 135.82, 130.10, 129.97, 129.49, 125.66, 125.37, 125.29, 125.23, 125.14, 124.40, 124.33, 116.13, 116.09, 115.89, 115.87, 115.22, 114.65, 114.04, 109.83, 109.62, 109.28, 105.72, 105.42, 71.22, 69.29, 56.86, 55.24, 53.84, 48.85, 41.60, 41.58, 41.20, 35.71, 34.67, 33.69, 33.36, 27.69, 25.96, 25.63, 25.32, 23.74, 21.43, 20.58, 20.02, 18.09, 17.77.

Example 20: 4-[[4-(Fluoro-phenyl)-4a-methyl-4,5,6,7,8-hexahydro-1H-benzof[1,2,3]triazol-5-yl]-hydroxy-methyl]-2-methyl-phenol (235)

Following the procedure of Example 11 but substituting (4-bromo-2-methyl-phenoxo)-trispropylsilane for 3-bromo-benzof[1]thiophene gave the trispropylsilyl
either of 4-{[1-(4-Fluoro-phenyl)-4a-methyl-4,4a,5,6,7,8-hexahydro-1H-benzo[f]indazol-5-yl]-hydroxy-methyl}-2-methyl-phenol 233 which was then
deprotected following the procedure of Example 13 to provide 235 in 25% yield. \(^1\)H NMR (CDCl\(_3\)) \(\delta\) 1.25 (3H, 1.50-1.80 (m, 6H), 2.26 (s, 3H), 2.27-2.47 (m, 2H), 2.73
5 (d, \(J=15.2\) Hz, 1H), 3.16 (d, \(J=15.2\) Hz, 1H), 5.10 (s, 1H), 6.10 (s, 1H), 6.73 (d, \(J=8.4\)
Hz, 1H), 7.03 (d, \(J=8.4\) Hz, 1H), 7.07 (s, 1H), 7.14 (t, \(J=8.0\) Hz, 2H), 7.40-7.50 (m, 3H). \(^13\)C NMR (CDCl\(_3\)) 158.97, 149.16, 146.84, 134.20, 133.86, 124.28, 121.70,
121.62, 120.18, 119.94, 112.41, 112.18, 110.88, 110.17, 105.31, 68.02, 52.95, 47.28,
37.53, 31.34, 29.64, 27.18, 22.04, 16.24, 16.15, 12.22.

10 Example 21: 4-{[4-(4-Fluoro-phenyl)-4a-methyl-4,4a,5,6,7,8-hexahydro-1H-
benzo[f]indazol-5-yl]-1H-indol-4-yl}-methanol (14%) (237)

Following the procedure of Example 11 but substituting 5-bromo-benzo[b]thiophene gave (237) in 14% yield. \(^1\)H NMR (CDCl\(_3\)) \(\delta\) 1.26 (s, 3H),
15 1.50-1.80 (m, 4H), 2.10-2.50 (m, 3H), 2.77 (d, \(J=15.2\) Hz, 1H), 3.16 (d, \(J=15.2\) Hz,
1H), 5.24 (d, \(J=2.4\) Hz, 1H), 6.08 (d, \(J=2.0\) Hz, 1H), 6.53 (s, 1H), 7.14-7.22 (m, 4H),
7.32 (d, \(J=8.4\) Hz, 1H), 7.40-7.50 (m, 3H), 7.64 (s, 1H), 8.12 (s, 1H). \(^13\)C NMR
(CDCl\(_3\)) 150.82, 137.92, 137.22, 135.94, 134.56, 127.61, 125.34, 125.26, 124.73,
119.87, 117.94, 116.07, 115.84, 115.80, 114.01, 110.76, 108.87, 102.41, 72.33, 60.37,

Example 22: 4-{[4-(4-Fluoro-phenyl)-4a-methyl-4,4a,5,6,7,8-hexahydro-1H-
benzo[f]indazol-5-yl-thiophen-3-yl-methanol (238)

Following the procedure of Example 11 but substituting 3-bromobenzo[b]thiophene for
25 3-bromo-benzo[b]thiophene gave (238) in 20% yield as a mixture of isomers. \(^1\)H
NMR (CDCl\(_3\)) \(\delta\) 1.22 (s, 3H), 1.70-1.94 (m, 4H), 2.24-2.48 (m, 2H), 2.96 (d, \(J=15.3\)
Hz, 1H), 3.99 (s, 1H), 3.13 (d, \(J=15.3\) Hz, 1H), 5.42 (d, \(J=3.7\) Hz, 1H), 6.10 (d, \(J=2.3\)
Hz, 1H), 6.93 (d, \(J=5.2\) Hz, 1H), 7.14 (m, 2H), 7.22 (d, \(J=5.2\) Hz, 1H), 7.40-7.46 (m,
3H). \(^13\)C NMR (CDCl\(_3\)) 150.21, 144.41, 137.94, 136.77, 135.75, 130.04, 125.39,
30 125.50, 124.25, 116.12, 115.89, 114.03, 109.15, 105.18, 69.09, 53.76, 41.58, 34.60,
Example 23: 4a'-methyl-(4'H,5'H,7'H)-spirol(1,3-dithiolane-2,2'-naphthalen-1-yl(3'H)-one (239)

To a solution of Wieland-Miescher ketone (5.87 g, 33.0 mmol) in glacial acetic acid (40 mL) was added p-toluene sulfonic acid (2.94 g) followed by dropwise addition of 1,2-ethanediol over a 1 hour period. The reaction mixture was stirred at room temperature for another 4 hours, poured into 30 mL water, and stirred for 15 minutes. The white solid was filtered off, washed successively with water, diluted with NaHCO₃ solution and water, and then dried to yield thiokeital 239 (7.33 g, 87.3 %) as a white solid. 1H NMR (CDCl₃) δ 1.55, 2.70 (m, 10H), 2.20-3.40 (m, 4H), 5.67 (s, 1H); 13C NMR (CDCl₃) 212.92, 141.23, 128.04, 64.81, 49.43, 40.11, 39.62, 37.92, 37.57, 30.81, 30.69, 24.73, 24.57.

Example 24: 4a'-methyl-(4'H,5'H,7'H)-spirol(1,3-dithiolane-2,2'-naphthalen-1-yl)-5-carboxaldehyde (241)

To a cold (~30 °C) solution of (methoxymethyl)triphenylphosphonium chloride (6.753 g, 19.7 mmol) in THF (40 mL), was added KHMDS (0.5M in toluene, 35.46 mL, 17.75 mmol). The resulting red solution was stirred at 0 °C for 15 minutes before being treated with a solution of 241 (1 g, 3.94 mmol) in THF (10 mL). The mixture was stirred at room temperature for 24 hours. A solution of methanol in THF (1:1, 12 mL) and 4 N HCl (13 mL) was added to the reaction mixture at 0 °C. The resulting solution was allowed to stir at room temperature for 36 hours, poured into water (40 mL) and extracted with ether (4 x 30 mL). The combined organic layers were washed with brine, dried (MgSO₄) and concentrated. Purification of the residue by flash chromatography on silica gel (1-3% ethyl acetate-hexanes) gave 783 mg (74%) of 241. 1H NMR (CDCl₃) δ 1.14 (s, 3H), 1.25-2.4 (m, 11H), 3.20-3.45 (m, 4H), 5.52 (s, 1H), 9.81 (d, J=2.0 Hz, 1H); 13C NMR (CDCl₃) 200.71, 139.59, 122.18, 61.37, 56.86, 36.40, 35.88, 33.56, 33.46, 33.06, 27.99, 22.15, 18.36, 15.84.

Example 25: 14a'-methyl-(4'H,5'H,7'H)-spirol(1,3-dithiolane-2,2'-naphthalen-1-yl)-(3,4,5-trimethoxy-pheryl)-methanol (243)

A solution of 5-bromo-1,2,3-trimethoxy-benzene (276 mg, 1.12 mmol) dissolved in 6 mL anhydrous ether is cooled to –78 °C and tert-butyllithium (1.7 M in pentane, 1.32 mL, 2.24 mmol) is added. The mixture was stirred at –78 °C for 15 minutes, then
at room temperature for 3 hours. Aldehyde 241 (100 mg, 0.373 mmol) was added
dropwise over 10 minutes in 10 mL ether at −30 °C. The mixture was stirred for 0.5
hours and the reaction quenched with dropwise addition of saturated aqueous NH₄Cl.
The phases were separated and the aqueous phase was extracted with ether (4 x
10 mL). The pooled organic extracts were washed with saturated aqueous NaHCO₃,
brine, dried (MgSO₄), filtered and concentrated under vacuum. The residue was
purified by flash chromatography over silica gel (25% ethyl acetate-hexanes) to yield
243 (119 mg, 73%).

Example 26: (4a'-methyl-(4'H,5'H,7'H)-spiro[1,3-dithiolane-2,2'-naphthalen-5-yl]-
(3-triisopropylhydroxyphenyl)-methanol (245)

Following the procedure of Example 25 but substituting 3-bromo-phenoxyl-
triisopropylsilane for 5-bromo-1,2,3-trimethoxy-benzene provided the triisopropyl
derivative of (4a'-methyl-(4'H,5'H,7'H)-spiro[1,3-dithiolane-2,2'-naphthalen-5-yl]-
(3-
triisopropylhydroxyphenyl)-methanol 245.

Example 27: (3a,7a-Dihydro-benzol[b]thiophen-3-yl)- (4a'-methyl-(4'H,5'H,7'H)-
spiro[1,3-dithiolane-2,2'-naphthalen-5-yl]-methanol (249)

Following the procedure of Example 26 but substituting 3-bromo-
benzol[b]thiophene for 5-bromo-1,2,3-trimethoxy-benzene provided 249 in 54% yield.

Example 28: 14a'-methyl-(4'H,5'H,7'H)-spiro[1,3-dithiolane-2,2'-naphthalen-5-yl]-
phenyl-methanol (247)

Aldehyde 241 (300 mg, 0.746 mmol) was dissolved in 10 mL THF and cooled
to −78 °C. Phenylmagnesium bromide (1M in THF, 1.12 mL, 1.12 mmol) was added
to the solution dropwise and the mixture was allowed to warm to room temperature
over 2 hours. The reaction mixture was then cooled to 0 °C and quenched with 10 mL
of water. The layers were separated and the aqueous layer was extracted with (3 x 10
mL) ether. The pooled organic extracts was washed with brine, dried (MgSO₄),
filtered, and concentrated under vacuum. Purification by flash chromatography over
silica gel (10% ethyl acetate-hexanes) afforded alcohol 247 (240 mg, 93%) as a white
solid.
Example 29: 5-(Hydroxy-phenyl-methyl)-4a-methyl-4,4a,5,6,7,8-hexahydro-3H- 
naphthalen-2-one (251)

Thieketal 245 (100 mg, 0.238 mmol) was dissolved in 3 mL CHCl₃ and 1 mL 
MeOH. A solution of Hg(ClO₄)₂ (253 mg, 0.633 mmol) in 3 mL MeOH was added 
dropwise. After 5 minutes of stirring at room temperature, the mixture was filtered 
and the filtrate was neutralized with 5 mL saturated NaHCO₃ solution. The layers 
were separated and the organic layer was extracted with CHCl₃ (3 x 5 mL). The 
pooled organic extracts were dried (MgSO₄) and filtered over a pad of alumina and 
celite. The filtrate was washed with CH₂Cl₂ and the solvents evaporated under 
vacuum to yield 251 (78 mg, 73%) as a white solid. ¹H NMR (CDCl₃) δ 1.42 (s, 3H), 
1.50-2.60 (m, 11H), 5.13 (d, J=4.0 Hz, 1H), 5.70 (s, 1H), 7.20-7.40 (m, 5H); ¹³C 
NMR (CDCl₃); HR-MS calculated for C₁₄H₂₃O₂: 270.1619, found: 270.1621.

Example 30: 5-(Hydroxy-(3,4,5-trimethoxy-phenyl)-methyl)-4a-methyl-4,4a,5,6,7,8- 
hexahydro-3H-naphthalen-2-one (253)

Following the procedure of Example 29 but substituting thieketal 243 for 
thieketal 245 provided ketone 253 in 87% yield. ¹H NMR (CDCl₃) δ 1.43 (s, 3H), 
1.50-2.70 (m, 11H), 3.83 (s, 3H), 3.86 (s, 6H), 5.07 (s, 1H), 5.73 (s, 1H), 6.50 (s, 2H); 
¹³C NMR (CDCl₃) 195.66, 167.64, 149.51, 149.96, 137.56, 132.95, 120.19, 99.99, 
98.56, 67.52, 57.09, 52.40, 52.27, 35.89, 32.56, 30.10, 29.67, 22.42, 15.67, 15.03; 
HR-MS calculated for C₂₁H₂₅O₂: 360.1936, found: 360.1935.

Example 31: 5-(4a,7a-Dihydro-benzof[l]thiophen-3-yl)-hydroxy-methyl)-4a-methyl- 
4,4a,5,6,7,8-hexahydro-3H-naphthalen-2-one (255)

Following the procedure of Example 29 but substituting thieketal 249 for 
thieketal 245 provided ketone 255 in 87% yield. ¹H NMR (CDCl₃) δ 1.43 (s, 3H), 
1.70-2.00 (m, 6H), 2.15 (d, J=5.6 Hz, 1H), 2.20-2.65 (m, 7H), 5.41 (d, J=5.2 Hz, 1H), 
5.76 (s, 1H), 7.18 (s, 1H), 7.27-7.40 (m, 2H), 7.76 (d, J=7.6 Hz, 1H), 7.91 (d, J=8.0 
Hz, 1H); ¹³C NMR (CDCl₃); HR-MS calculated for C₁₉H₂₀O₂S: 336.1341, found: 326.1348.
Example 32: 5-(Hydroxy-(3-hydroxy-phenyl)-methyl)-4a-methyl-4,4a,5,6,7,8-
hexahydro-2H-naphthalen-2-one; 84% (257)

Following the procedure of Example 29 but substituting thiketal 247 for
thiketal 245 and then following the procedure of Example 13 gave 257 (53.8 mg,
84%) as a white solid.IH NMR (CDCl3) 6 1.36 (s, 3H), 1.40-2.80 (m, 12H), 5.01 (d,
J=2.0 Hz, 1H), 5.70 (s, 1H), 6.60-6.90 (m, 2H), 7.15 (t, J=8.0 Hz, 1H), 7.62 (s, 1H);
13C NMR (CDCl3); HR-MS calculated for C18H20O2: 286.1569, found: 286.1570.

Example 33: 11-(4-Fluoro-phenyl)-4a-methyl-4,4a,5,6,7,8-hexahydro-1H-
benzof[l]indazol-5-yl-phenanthren-9-yl-methanol (259)

Following the procedure of Example 11 but substituting 9-bromophenanthrene
for 3-bromo-benzof[l]thiophene gave (259) in 32% yield. IH NMR (CDCl3) 6 1.41 (s,
3 H), 1.80 (m, 4 H) 1.95 (d, J=11.72 Hz, 1 H) 2.27 (m, 1 H) 2.42 (m, 1 H) 3.13 (d,

Hz, 1 H) 7.15 (t, J=8.79 Hz, 2 H) 7.47 (dd, J=9.03, 4.64 Hz, 2 H) 7.59 (s, 1 H) 7.65
(m, 4 H) 7.94 (d, J=7.32 Hz, 1 H) 8.02 (s, 1 H) 8.08 (d, J=7.81 Hz, 1 H) 8.68 (d,
J=7.81 Hz, 1 H) 8.78 (d, J=6.84 Hz, 1 H); 13C NMR (CDCl3) 20.31, 20.38, 25.66,
33.32, 34.75, 42.62, 52.26, 69.15, 108.97, 113.82, 115.92, 116.14, 122.41, 123.27,
123.56, 125.01, 125.26, 125.34, 126.24, 126.61, 126.64, 126.84, 128.79, 129.24,
129.85, 130.74, 131.12, 135.84, 136.94, 137.97, 138.1, 151.08, 160.19.

Example 34: 4a-Methyl-1-(3-phenethyl-phenyl)-1,4,4a,5,6,7,8-hexahydro-
benzof[l]indazol-5-one (261)

Following the procedure of Example 3 but substituting (3-Phenethyl-phenyl)-hydrazone hydrochloride for 4-fluorophenylhydrazine hydrochloride gave
(261) in 26% yield over two steps. IH NMR (CDCl3) 6 1.25 (s, 3 H) 1.68 (m, 1 H)
2.08 (m, 1 H) 2.61 (m, 4 H) 2.90 (d, J=2.93 Hz, 2 H) 6.38 (d, J=1.47 Hz, 1 H) 7.35
(m, 3 H) 7.46 (m, 2 H) 7.49 (s, 1 H) 7.51 (s, 1 H) 7.54 (dd, J=6.59, 3.17 Hz, 2 H) 7.66
(s, 1 H); 13C NMR (CDCl3) 22.6, 23.2, 28.2, 31.5, 38.5, 50.6, 88.3, 90.3, 110.9, 114.3,
122.7, 123.2, 124.4, 126.2, 128.3, 128.5, 129.2, 130.1, 131.5, 135.8, 138.5, 139.6,
145.7, 212.5.

Compound 261 gave an IC50 of 174.4 nM in a GR binding assay.
Example 35: 3-(4-fluoro-phenyl)-8-bromo-11b-methyl-5,6,12-trihydro-indazole 5,6-alcarbazole (263)

Following the procedure of Example 3 but substituting 4-bromo-phenylhydrazine hydrochloride for 4-fluorophenylhydrazine hydrochloride gave 263 in 24% yield. 1H NMR (CDCl3) δ 1.37 (s, 3 H) 2.65 (m, 3 H) 2.79 (d, J=15.63 Hz, 1 H) 2.94 (dd, J=13.18, 3.91 Hz, 1 H) 3.00 (d, J=15.14 Hz, 1 H) 6.40 (s, 1 H) 7.14 (d, J=3.42 Hz, 1 H) 7.17 (d, J=3.42 Hz, 1 H) 7.22 (m, 1 H) 7.36 (s, 1 H) 7.49 (m, 3 H) 7.61 (d, J=1.95 Hz, 1 H) 8.28 (s, 1 H); 13C NMR (CDCl3) 21.7, 24.7, 31.1, 33.4, 37.7, 108.6, 110.7, 112.1, 112.5, 114.4, 116.1, 116.3, 121.0, 124.2, 125.4, 125.4, 128.3, 128.6, 134.9, 135.5, 137.1, 137.9, 141.6, 147.5.

Example 36: 3-(4-fluoro-phenyl)-8-methoxy-11b-methyl-5,6,12-trihydro-indazole 5,6-alcarbazole (265)

Following the procedure of Example 3 but substituting 4-methoxy-phenylhydrazine hydrochloride for 4-fluorophenylhydrazine hydrochloride gave 265 in 16.8% yield. 1H NMR (CDCl3) δ 1.39 (s, 3 H) 2.69 (m, 3 H) 2.82 (d, J=15.14 Hz, 1 H) 2.99 (m, 2 H) 3.56 (s, 3 H) 6.41 (s, 1 H) 6.83 (dd, J=8.79, 2.44 Hz, 1 H) 6.96 (d, J=2.44 Hz, 1 H) 7.18 (m, 2 H) 7.22 (d, J=8.79 Hz, 1 H) 7.51 (m, 3 H) 7.88 (s, 1 H); 13C NMR (CDCl3) 22.0, 24.8, 31.3, 33.6, 37.7, 56.0, 100.8, 109.1, 110.6, 111.4, 114.6, 116.0, 116.2, 125.3, 125.3, 127.2, 128.3, 131.3, 135.7, 135.8, 137.1, 138.0, 141.2, 147.9, 154.1, 160.3, 162.8.

Example 37: 3-(4-fluoro-phenyl)-8-fluoro-11b-methyl-5,6,12-trihydro-indazole 5,6-alcarbazole (267)

In a 50mL round bottom flask fitted with a Dean-Stark trap and condenser, a mixture of ketone 265 (150 mg, 0.51 mmol), 4-fluorophenylhydrazine hydrochloride (91 mg, 0.56 mmol), and sodium acetate (46 mg, 0.56 mmol), were dissolved in 10 mL glacial acetic acid and heated to 100°C for 3h. After cooling to room temperature, solvents were evaporated and the residue was purified by flash chromatography (50% EtOAc/benzene) to yield 269 (67.8 mg, 34%). 1H NMR (CDCl3) δ 1.40 (s, 3 H) 2.67 (m, 3 H) 2.84 (d, J=15.14 Hz, 1 H) 2.95 (t, J=4.88 Hz, 1 H) 3.03 (d, J=15.14 Hz, 1 H) 6.42 (s, 1 H) 6.91 (dd, J=9.16, 2.69 Hz, 1 H) 7.13 (dd, J=9.17, 2.44 Hz, 1 H) 7.19 (t, J=8.30 Hz, 2 H) 7.24 (dd, J=8.79, 4.39 Hz, 1 H) 7.50 (t, J=4.39 Hz, 2 H) 7.55 (s, 1
Example 38: 6-Anthracen-9-ylmethylene-1-(4-fluoro-phenyl)-4a-methyl-1,4,6,7,8-hexahydro-benzof[f]imidazol-5-one (269)

In a 100mL round bottom flask, aldehyde (207) (100 mg, 0.337 mmol) and anthracene-9-carboxaldehyde (249 mg, 1.69 mmol) were dissolved in 10mL THF and cooled to 0 °C. Lithium hexamethyldisilazide (LHMDS) (370 µL, 0.370 mmol) was added dropwise, and the solution was stirred at room temperature for 16 hours. The reaction was quenched with 5mL of saturated aqueous ammonium chloride. The aqueous layer was extracted with ether (3 × 10mL), and the pooled organic extracts were washed with brine (10 mL), dried (MgSO4) and then concentrated. Flash chromatography of the residue (0-25% EtOAc/hexanes) gave (269) (127.9 mg, 78%).

1H NMR (CDCl3) δ 1.45 (s, 3 H), 2.19 (m, 1 H), 2.35 (m, 2 H), 2.47 (m, 1 H), 3.04 (s, J=16.11 Hz, 1 H), 3.15 (d, J=16.11 Hz, 1 H), 6.25 (s, 1 H), 7.13 (t, J=8.55 Hz, 2 H), 7.47 (m, 6 H), 7.55 (s, 1 H), 7.87 (m, 1 H), 8.00 (m, 3 H), 8.39 (s, 1 H), 8.43 (s, 1 H). 13C NMR (CDCl3) 23.5, 27.2, 29.7, 30.2, 49.4, 110.4, 114.0, 115.9, 116.1, 125.0, 125.1, 125.2, 125.3, 125.5, 126.1, 127.5, 128.8, 128.9, 129.9, 129.0, 131.1, 131.1, 135.5, 135.7, 135.7, 136.4, 138.5, 139.1, 145.2, 160.2, 162.6, 202.8.

Example 39: Binding data for compounds 263, 265, 267 and 269

Representative results of glucocorticoid receptor (GR) binding data for the compounds of Examples 35 – 38 are shown in Table 2, compared to dexamethasone.

#### Example 41: Glucocorticoid Receptor Binding Assay, Tissue Culture, Transfection

and Luciferase Assays

The Glucocorticoid Receptor Competitor Assay Kit (Panvera Corp, Madison, WI) was used for ligand binding studies. The recommended room temperature protocol was followed for all assayed ligands.

Plasmids for GR (human, pSG5 backbone), AP1-Luc (synthetic AP1 response element upstream of a firefly luciferase gene), TAT-Luc (three copies of the tyrosine aminotransferase glucocorticoid response element upstream of a firefly luciferase gene), β-galactosidase (used as a transfection control), as well as two stable transfected cell lines: an A549 (human, lung carcinoma) cell line stably transfected with a kb response element upstream of a firefly luciferase gene, (R. M. Nissen et al., *Genes Dev.*, 14(18):2314-29, (2000)) and a U2OS (human, osteosarcoma) stably transfected with rat GR (I. Rogatsky, et al., *Mol. Cell. Biol.*, 1997, 17, 3181-3193) were a gift of Professor Keith Yamamoto (Department of Biochemistry, University of California, San Francisco).

For TAT activation assays, CV-1 cells were grown in 0.1 μm filtered DME supplemented with 4.5 g/L glucose, 0.584 g/L L-glutamine, 3.7 g/L NaHCO₃, 100 mg/L streptomycin sulfate, 100 units/ml of penicillin G and 5% fetal bovine serum.
Cells were plated into tissue culture treated, 96 well flat bottom plates (25,000
5 cells/well), and incubated for 12h at 37°C. Cells were then transfected using the
Lipofectamine PLUS transfection reagent (Gibco BRL). DNA-lipid complexes of 5
ng GR, 50 ng TAT2-Luc, 7.5 ng β-galactosidase, 1 μL/well PLUS reagent and 0.67
μL/well lipofectamine in 50 μL/well serum free media were added to cells and
incubated for 4h at 37°C. Complexes were removed and hormones diluted in 5%
charcoal-stripped FBS were added to the cells, which were then incubated for 24
hours at 37°C. Media was removed and the cells were washed with 100 μL Ca2+,
Mg2+ free phosphate buffered saline (PBS). Lysis was achieved by adding 50 μL of
Passive Lysis Buffer (Promega Corp, Madison, WI) and shaking the plate for 15 min.
15 μL of this lysate was then used to assay β-galactosidase activity (β-galactosidase
enzyme assay system, Promega Corp., recommended procedures followed). The
Luciferase Assay System (Promega Corp.) was used to assay luciferase activity. 100
μL of luciferase assay reagent was added rapidly to the plate and luminescence was
measured for 10 ms/well on an Analyst AD Detection System (LJL Biosystems,
Sunnyvale, CA).

For AP1 repression assays, U2OS cells stably transfected with rat GR were
grown in similar media as for CV-1 cells with the exception of the FBS concentration,
which was 10% and the only antibiotic was 350 μg/mL. Cells were plated and
transfected in a similar fashion, except for plasmids, which in this case were 50
ng/well AP1-Luc and 10 ng/well β-galactosidase. Post-transfection, cells were
incubated with either 50 ng/mL TPA (Phorbol 12-myristate 13-acetate), or 50 ng/mL
TPA and various hormone dilutions in 10% charcoal treated FBS media. The cells
were incubated for 12h, and the lysis, β-galactosidase assay, and luciferase assay were
performed as previously described.

For NF-κB repression assays, A549 cells stably transfected with a luciferase
reporter were grown under the same conditions as CV-1 cells. 50,000 cells/well were
plated into 96 well plates and incubated for 12h at 37°C. Either TNF-α alone or
mixed with various hormone dilutions in media were then added to the cells, which
were then incubated for 8 hours. Procedures for lysis and luciferase assay were
performed as previously described. Protein content was used as a control in this case
and the recommended procedures using the BCA Protein Assay Kit (Roche) were
followed.
The compounds of the invention possessed significant binding affinity for the glucocorticoid receptor (greater than 1.0 μM). The transactivation data indicated that the compounds of the invention were able to selectively disassociate the different response elements of the glucocorticoid receptor.

Finally, it should be noted that there are alternative ways of implementing both the present invention. Accordingly, the present embodiments are to be considered as illustrative and not restrictive, and the invention is not to be limited to the details given herein, but may be modified within the scope and equivalents of the appended claims.

All patents and other publications cited herein are incorporated herein by reference in their entirety for all purposes.
What is claimed is:

1. A compound according to the structural formula:

```
   R_A
   /\  \\
  /   \   /
 R_B /   \ / R_C
      /   \   /
      \   /   \\
       \ /   \\ R_D
        \ /  \\
         \ / \\
          \ / \\
           \ / \\
            \  \\
             \  \\
              \  \\
```

or a pharmaceutically available salt, solvate, or hydrate thereof wherein:

- A, B and C are independently carbon, nitrogen, oxygen or sulfur provided that at least one of A, B and C is nitrogen, oxygen or sulfur and that no more than one of A, B and C are oxygen or sulfur;
- W is carbon, oxygen, nitrogen, or sulfur and, when W is other than carbon and nitrogen, one or more of R_6, R_9 and R_10 is absent so that a normal valence on W is maintained;
- R_1 is hydrogen, alkyl, substituted alkyl, acyl, substituted acyl, acylamino, substituted acylamino, amino, alkylamino, substituted alkylamino, dialkylamino, substituted dialkylamino, alkoxy carbonyl, substituted alkoxy carbonyl, aryalkyl, substituted aryalkyl, aryl carbonyl, substituted aryl carbonyl, carboxy, cyano, halo, heteroaryl or substituted heteroaryl,
- heteroarylalkyl or substituted heteroarylalkyl;
- R_2, R_3, R_5, R_6, R_9', and R_7 are independently hydrogen, alkyl, substituted alkyl, acyl, substituted acyl, acylamino, substituted acylamino, amino, alkoxy, substituted alkoxy, alkyaminino, substituted alkyaminino, dialkylaminino, substituted dialkylaminino, alkyloxycarbonyl, substituted alkyloxycarbonyl, alkyl sulfanyl, substituted alkyl sulfanyl, alkyl sulfinyl, substituted alkyl sulfinyl, alkylthio, substituted alkylthio, alkoxy carbonyl, substituted alkoxy carbonyl, arylalkyl, substituted aryalkyl, aryl oxycarbonyl, substituted aryloxycarbonyl, carbamoyl,
substituted carbamoyl, carboxy, cyano, halo, heteroalkyl, substituted heteroalkyl, heteroarylalkyl, substituted heteroarylalkyl or hydroxy;

R₁', R₂', R₃', R₄' and R₅ are absent or are independently hydrogen, alkyl, substituted alkyl, acyl, substituted acyl, acylamino, substituted acylamino, alkoxy, substituted alkoxy; amino, alkylamino, substituted alkylamino, dialkylamino, substituted dialkylamino, alkylnitro, substituted alkylnitro, alkylsulfonfyl, substituted alkylsulfonfyl, alkylsulfinyl, substituted alkylsulfinyl, alkylthio, substituted alkylthio, alkoxycarbonyl, substituted alkoxycarbonyl, aryalkyl, substituted aryalkyl, aryloxy carbonyl, substituted aryloxy carbonyl, aryloxy carbonyl, substituted aryloxy carbonyl, carboxy, substituted carboxy, cyano, halo, heteroalkyl, substituted heteroarylalkyl, or hydroxy;

R₄ is absent or is hydrogen, alkyl, substituted alkyl, acyl, substituted acyl, acylamino, substituted acylamino, amino, alkylnitro, substituted alkylnitro, dialkylamino, substituted dialkylamino, alkoxy carbonyl, substituted alkoxy carbonyl, aryalkyl, substituted aryalkyl, aryloxy carbonyl, substituted aryloxy carbonyl, carboxy, substituted carboxy, cyano, halo, heteroalkyl, substituted heteroarylalkyl, or substituted heteroarylalkyl;

R₅ is hydrogen, alkyl, substituted alkyl, alkoxy, substituted alkoxy, amino, alkylamino, substituted alkylamino, dialkylamino, substituted dialkylamino, carboxy, substituted carboxy, or is absent; and

R₁₀ is hydrogen, alkyl, substituted alkyl, acyl, substituted acyl, alkoxy carbonyl, substituted alkoxy carbonyl, aryl, substituted aryl, aryalkyl, substituted aryalkyl, aryloxy carbonyl, substituted aryloxy carbonyl, cycloalkyl, substituted cycloalkyl, cyclohexaalkyl, substituted cyclohexaalkyl, heteroalkyl, substituted heteroalkyl, heteroaryl, substituted heteroaryl, heteroarylalkyl, or is absent;

R₁₀ and R₅ may bond directly to one another to form a ring, and an additional ring such as a benzene ring, which may itself be substituted with an alkyl, alkoxy, halo, alkyl, substituted alkyl, acyl, substituted acyl, cycloalkyl, or substituted cycloalkyl, may fuse to the bond between R₁₀ and R₅;

R₁₁ and R₁₂ are independently hydrogen, alkyl, substituted alkyl, acyl, substituted acyl, acylamino, substituted acylamino, alkoxy, substituted alkoxy, amino, alkylamino, substituted alkylamino, dialkylamino, substituted dialkylamino, alkylnitro, substituted alkylnitro, alkylsulfonfyl, substituted alkylsulfonfyl, alkylsulfinyl, substituted alkylsulfinyl,
alkylthio, substituted alkylthio, alkoxy carbonyl, substituted alkoxy carbonyl, aryl, 
substituted aryl, arylalkyl, substituted arylalkyl, aryloxycarbonyl, substituted 
aryl oxycarbonyl, carbamoxy, substituted carbamoxy, carboxy, cyano, halo, exo, thio, 
heteroalkyl, substituted heteroalkyl, heteroaryl, substituted heteroaryl, heteroarylalkyl,
substituted heteroarylalkyl or hydroxy; and
one of the bonds in formula (D) that are shown with single and dashed lines is a
double bond provided that normal valences of the atoms in the rings are satisfied.

2. The compound of Claim 1, wherein A, B and C are carbon or nitrogen.

3. The compound of Claim 2, wherein A is carbon and B and C are
nitrogen.

4. The compound of Claim 1, wherein R₁ and R₄ are independently
hydrogen, alkyl, substituted alkyl, acyl, substituted acyl, alkoxy carbonyl, substituted
alkoxy carbonyl, carboxy, cyano, carbamoxy, substituted carbamoxy, heteroalkyl and
substituted heteroarylalkyl.

5. The compound of Claim 1, wherein R₂ and R₃ are independently
hydrogen, alkanyl or substituted alkanyl.

6. The compound of Claim 1, wherein R₁ and R₄ are independently
hydrogen or methyl.

7. The compound of Claim 1, wherein R₂, R₃, R₄, R₄', and R₇ are
independently hydrogen, alkyl, substituted alkyl, acyl, substituted acyl, alkoxy,
substituted alkoxy, amino, alkoxy carbonyl, substituted alkoxy carbonyl, carbamoxy,
substituted carbamoxy, carboxy, cyano, halo, heteroalkyl, substituted heteroalkyl, or
hydroxy.

8. The compound of Claim 1, wherein R₂, R₂', R₃, R₄, R₄', R₇ and R₈ are
independently hydrogen, alkanyl or substituted alkanyl.
9. The compound of Claim 1, wherein R₂, R₂', R₅, R₆, R₆', R₇, and R₈ are hydrogen or methyl.

10. The compound of Claim 1, wherein R₄ and R₅ are absent.

11. The compound of Claim 1, wherein R₄ and R₇ are absent.

12. The compound of Claim 1, wherein R₃' and R₄' are absent.

13. The compound of Claim 1, wherein R₃', R₄', and R₅' are independently hydrogen, alkyl, substituted alkyl, acyl, substituted acyl, alkoxy, substituted alkoxy, amino, alkoxycarbonyl, substituted alkoxycarbonyl, carbamoyl, substituted carbamoyl, carboxy, cyano, halo, heteroalkyl, substituted heteroalkyl, or hydroxy.

14. The compound of Claim 1, wherein R₃', R₄', and R₅' are independently hydrogen, alkanyl or substituted alkanyl.

15. The compound of Claim 1, wherein R₃', R₄', and R₅' are hydrogen or methyl.

16. The compound of Claim 1, wherein R₉ is hydrogen, alkoxy, substituted alkoxy, halo, oxo, thio, hydroxy or is absent.

17. The compound of Claim 1, wherein R₁₀ is hydrogen, alkyl, substituted alkyl, aryl, substituted aryl, aryalkyl, substituted aryalkyl, heteroalkyl, substituted heteroalkyl, heteroaryl, substituted heteroaryl, heteroaryalkyl, substituted heteroaryalkyl or is absent.

18. The compound of Claim 1, wherein R₁₁ and R₁₂ are independently hydrogen, alkyl, alkoxy, amino, alkylamino, dialkylamino, alkylsulfonamido, alkylsulfino, alkylthio, alkoxycarbonyl, substituted alkoxycarbonyl, aryl, substituted aryl, aryalkyl, substituted aryalkyl, carbamoyl, carboxy, cyano, halo, oxo, thio, heteroalkyl,
heteroaryl, substituted heteroaryl, heteroarylalkyl, substituted heteroarylalkyl or hydroxy.

19. The compound of Claim 1, wherein \( R_{11} \) and \( R_{12} \) are independently hydrogen, aryl, substituted aryl, arylalkyl, substituted arylalkyl, oxo, heteroaryl, heteroaryl, substituted heteroaryl, heteroarylalkyl, substituted heteroarylalkyl or hydroxy.

20. The compound of Claim 1, wherein \( R_{11} \) and \( R_{12} \) are independently hydrogen, aryl or substituted aryl.

21. The compound of Claim 1, wherein \( R_1, R_2, R_2', R_3, R_3', R_4, R_4', R_5, R_5', R_6, R_6', R_7 \) and \( R_8 \) are hydrogen, alkyl or arylalkyl and \( R_4 \) and \( R_4' \) are absent.

22. The compound of Claim 1, wherein \( R_1 \) is methyl, \( R_2, R_2', R_3, R_3', R_5, R_5', R_6, R_6', R_7 \) and \( R_8 \) are hydrogen and \( R_4 \) and \( R_4' \) are absent.

23. The compound according to any one of the preceding claims, wherein \( R_8 \) is alkoxy, oxo or hydroxy.

24. The compound according to any one of the preceding claims, wherein \( R_{10} \) is aryl, substituted aryl, heteroaryl or substituted heteroaryl.

25. The compound of Claim 21 or 22, wherein \( A \) is carbon, \( B \) and \( C \) are nitrogen, \( R_{11} \) is hydrogen and \( R_{12} \) is aryl, substituted aryl, heteroaryl or substituted heteroaryl.

26. The compound of Claim 1, wherein \( R_1 \) is methyl, \( R_2, R_2', R_3, R_3', R_5, R_5', R_6, R_6', R_7 \) and \( R_8 \) are hydrogen, \( R_4 \) and \( R_4' \) are absent, \( R_9 \) is alkoxy, oxo or hydroxy, \( R_{10} \) is aryl, substituted aryl, heteroaryl or substituted heteroaryl, \( A \) is carbon, \( B \) and \( C \) are nitrogen, \( R_{11} \) is hydrogen and \( R_{12} \) is aryl, substituted aryl, heteroaryl or substituted heteroaryl.
27. The compound of Claim 26, wherein $R_9$ is hydroxy and $R_{19}$ is

![Chemical structures]

28. A method for treating or preventing obesity, diabetes, anxiety, depression, neurodegeneration or an inflammatory disease in a patient comprising administering to a patient in need of such treatment or prevention a therapeutically effective amount of a compound according to Claim 1.

29. A pharmaceutical composition comprising the compound of Claim 1.

30. A method for treating or preventing obesity, diabetes, anxiety, depression, neurodegeneration or an inflammatory disease in a patient comprising administering to a patient in need of such treatment or prevention a therapeutically effective amount of a composition according to Claim 29.

31. A method for selectively modulating the activation, repression, agonism and antagonism effects of the glucocorticoid receptor in a patient, comprising administering to said patient a therapeutically effective amount of a composition according to Claim 29.

32. A method for selectively modulating the activation, repression, agonism and antagonism effects of the glucocorticoid receptor in a patient, comprising administering to said patient a therapeutically effective amount of a compound according to Claim 1.
33. A composition comprising the compound of Claim 1 for treating or preventing obesity, diabetes, anxiety, depression, neurodegeneration or an inflammatory disease in a patient in need of such treatment.

34. A compound according to Claim 1, wherein the compound is an antagonist of the glucocorticoid receptor.

35. A compound according to Claim 1, wherein the compound is an agonist of the glucocorticoid receptor.

36. A method of synthesizing a compound according to any one of claims 1 to 27.

37. A compound according to claim 1 substantially as herein described with reference to any one of the Examples.
