No. 783,175. Patented February 21, 1905.

UNITED STATES PATENT OFFICE.

GEORGE F. CASSIDY, OF EAST PITTSBURG, PENNSYLVANIA, ASSIGNOR OF ONE-HALF TO ALOYSIUS J. SEVERIN, OF EAST PITTSBURG, PENNSYLVANIA.

SUIT-HANGER.

SPECIFICATION forming part of Letters Patent No. 783,175, dated February 21, 1905.

Application filed August 12, 1904. Serial No. 220,574.

To all whom it may concern:

Be it known that I, GEORGE F. CASSIDY, a citizen of the United States, residing at East Pittsburg, in the county of Allegheny and State of Pennsylvania, have invented certain new and useful Improvements in Suit-Hangers, of which the following is a specification.

The object of my invention is to provide a new and improved suit-hanger; and to this end my invention consists of a new and improved suit-hanger and in the construction and combination of parts, all as fully hereinafter described and particularly claimed.

In the accompanying drawings, which illustrate an application of my invention, Figure 1 is a side elevational view of a hanger constructed in accordance with my invention, showing a portion of a pair of trousers supported therein; Fig. 2, a perspective view, and Fig. 3 a detail view, of a portion of the device.

Referring to the drawings, my suit-hanger, as illustrated and as preferred, comprises a curved bar or rod 1, made of any suitable material, forming a coat-support of the ordinary form, and 2 a hook.

Attached to part 1 and extending downwardly therefrom are two similar bent rods 3. These rods, as illustrated, are fastened to bar 1 by means of staples 4, but may be movably connected thereto by other suitable fastening means. The bent rods each preferably consist of portions 5, 6, and 7 and form the movable and adjustable clamping-jaws of the trousers-supporting part of my improved suit-hanger. Surrounding each of the bent rods 3 are two adjustable binding collars or rings 8. These rings are adapted to freely slide along the rods and may be readily moved on the rods to permit the rods to be moved away from each other for the purpose of inserting the lower ends of a pair or pairs of trousers, as 9, and also moved to bring the said portions together for the purpose of securely clamping the trousers between the clamping-jaws.

What I claim is—

In a suit-hanger, the combination, with a curved bar for supporting the shoulders of a garment provided with means for supporting the bar, two similar movable rods each bent to form a longitudinal trousers-engaging portion, two vertical portions extending upwardly and at right angles to the longitudinal portion and bent engaging portions in contact with the curved bar, means for movably attaching the rods to the curved bar near the ends of the bar, and adjustable collars located on the rods and adapted to be moved on the longitudinal and vertical portions of the rods, substantially as set forth.

In testimony whereof I affix my signature in presence of two witnesses.

GEORGE F. CASSIDY.

Witnesses:
