(54) Title: PERSONALIZED INTERACTIVE DIGITAL CATALOG PROFILING

(57) Abstract: An interactive and enhanced digital Instant Catalog (222) of products, services, and information that is personalized or personally profiled, to each unique user of the catalog. The catalog instantly and intelligently captures, stores, manages, and processes self-selected, reusable and "re-distributable" catalog groupings anonymously (140), for personalizing, enhancing, monitoring, tracking, and peer sharing through multiple mediums and platforms by intelligent agents for a variety of user and vendor specified purposes. The personally profiled cataloged information can be viewed instantaneously and simultaneously by each effected component or member of a supply chain, at the time the product or service has been cataloged, without identifying the cataloger. The user (111), who preferably employs a Web browser over the Internet (130), personalizes the interactively produced intelligent catalog content. Products, services, and information groupings are digitally captured and stored by an intelligent catalog agent for enhanced personalized interaction and networking through a peer sharing network, or through an open catalog exchange. The user has the ability to create their own individualized world of products, services, and information that is contextually tailored to each user's unique environment in real-time. Web services hosted within a personal Extranet can

anonymously (140) assist and facilitate a context specific task or service insightfully and spontaneously. Through the selective cataloging (223) of multi-vendor products, services, and information, a user is able to fully control, personalize, enhance and share, any lifestyle interest captured from ITV, print, the World Wide Web, businesses, and peers.
