Title: COMBINATION CARRYING PACK AND BLANKET AND PILLOW

Abstract: The present invention comprises a blanket and pillow that can be easily converted into a backpack. When configured as a blanket, the device can be secured to the child’s legs and the shoulder straps can be used as a pillow. To convert the device into a backpack, side portions are zipped against the side walls of the blanket portion, and a sack is created. A flap can open and close, and the flap is preferably secured with a hook-and-loop type fastening material. When in the backpack configuration, the device remains secure on the child. The device is intended for children, and as such, may include a fanciful animal head plush toy incorporated at the front, a plush animal tail in the rear, and animal paws around the waist when configured as a backpack.

* Special categories of cited documents:
"A" document defining the general state of the art which is not considered to be of particular relevance
"E" earlier application or patent but published on or after the international filing date
"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of citation or other special reason (as specified)
"O" document referring to an oral disclosure, use, exhibition or other means
"P" document published prior to the international filing date but later than the priority date claimed

"I" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
"&" document member of the same patent family
