(54) Title: FEEDING-BOTTLES

(57) Abstract: A feeding-bottle has a teat (1) that is clamped to the bottle-neck (6) under an annular lip (7) of a collar (5) screwed to the bottle (4). The lip (7) engages in a circumferential groove (11) in the teat-bell (10) for pressing the retention flange (2) of the teat (1) onto the rim (3) of the neck (6) in airtight seal. Air is admitted to the bottle (4) via a flow-limiting slit (18) at the end of a passage (14) of lozenge cross-section that extends radially through the flange (2) beneath a lug (19). The lip (7) bears on the lug (19) to compress the flange (2) so that adjustment of the tightness of the collar (5) varies constriction of the passage (14) for regulating the air-flow into the bottle (4).

° Special categories of cited documents :

"A" document defining the general state of the art which is not considered to be of particular relevance

"E" earlier document but published on or after the international filing date

"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"O" document referring to an oral disclosure, use, exhibition or other means

"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.

"&" document member of the same patent family
