MANAGING INTELLECTUAL PROPERTY ASSET TRANSACTION INFORMATION IN A NETWORKED COMPUTING ENVIRONMENT

**Abstract:** A set of computer storage devices containing transaction records having transaction information corresponding to a set of transactions for a set of IP assets will be queried. At least a subset of the transaction information will be extracted and the types of IP transactions will be determined. A first table will then be generated based on the extracted transaction information. The first table typically identifies each IP transaction and corresponding transaction information. Based on the transaction information, a most recent transaction record for each of the set of IP assets will be identified. The system will then generate a second table based on the transaction information and the types of IP transaction(s). The second table will identify the most recent transaction information for each of the set of IP assets.
before the expiration of the time limit for amending the claims and to be republished in the event of receipt of amendments (Rule 48.2(h))

INTERNATIONAL SEARCH REPORT

PCT/US 14/1 11615

A. CLASSIFICATION OF SUBJECT MATTER

IPC(8) - G06Q 50/00 (2014.01)
USPC - 705/310

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
USPC: 705/310

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched
USPC: 705/1.1, 310, 311, 7.1.1, 7.12, 7.15, 700/1, 90 (keyword limited; terms below)
