(54) **Dispenser head for adhesive material and method for depositing adhesive material using said head**

(57) Dispenser head for adhesive material, for the automatic depositing of adhesive and/or bi-adhesive tape on objects in a production line, comprising an unwinding roller (13) housing a reel of tape, depositing means mobile in at least a first position for depositing the tape, cutting means for cutting the tape at the end of depositing on one of the objects, and motor means to move the depositing means in the first position. The dispenser head also comprises an electronic control and processing unit (40) to drive the motor means, speed detection means (41) connected to the electronic control and processing unit (40) and suitable to detect the speed of advance of each object, presence detection means, connected to the electronic control and processing unit (40), suitable to detect the presence of each of the objects in a deposit position, the electronic control and processing unit (40) being suitable to move the depositing means, in a second position for cutting the tape, in a manner coordinated both with the speed of advance of each of the objects with respect to the dispenser head, and also with the disposition of each of the objects in a predetermined deposit position for depositing the tape.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 09 15 0189

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
