11 MAR 2014

wherein one of the first or the second connecting arrangement (120) includes a cut-out portion having a neck portion (122) leading to a wider head portion (124), and

wherein another of the first or the second connecting arrangement (108) includes a projection having a neck portion (114) leading to a wider head portion (109), with dimensions of the neck portion and the head portion corresponding to dimensions of the firstmentioned neck portion and the firstmentioned head portion so that, in use, the first and the second connecting portions releasably interlock.

20. An injector assembly (100) including:

a main body (102) having a first connecting arrangement, and

a cap (104) having a second connecting arrangement for, in use, releasably connecting the cap to the first connecting arrangement of the main body,

wherein one of the first or the second connecting arrangement includes a bulb-shaped projection (108) and another of the first or the second connecting arrangement includes a bulb-shaped cut-out (120) for, in use, receiving the bulb-shaped projection.

21. An injector assembly substantially as described herein and/or with reference to the accompanying drawing.

Dated this 11th day of March, 2014.
