UNITED STATES PATENT OFFICE.

JAMES H. ALEXANDER, OF PHILADELPHIA, PENNSYLVANIA, ASSIGNOR TO
THOMAS DEVLIN & CO., OF SAME PLACE.

DESIGN FOR A TUREEN-HANDLE.

SPECIFICATION forming part of Design No. 16,630, dated April 20, 1886.

Application filed February 18, 1886. Serial No. 192,461. Term of patent 7 years.

To all whom it may concern:

Be it known that I, JAMES H. ALEXANDER, a citizen of the United States, residing at Philadelphia, in the county of Philadelphia and State of Pennsylvania, have invented a certain new and useful Design for Tureen Handles; and I do hereby declare the following to be a full, clear, and exact description of the invention, reference being had to the accompanying drawings, which form part of this specification, in which—

Figure 1 is a plan view of the handle complete. Fig. 2 is a rear elevation of hand-bar, and Fig. 3 is a vertical transverse section of hand-bar.

My design for a tureen-handle relates to the hand-bar and the ear thereof; and it consists in the ornamental configuration of outline and surface, as hereinafter described and specifically claimed.

Referring to the accompanying drawings, A represents the hand-bar, and B the ear or bracket, the hand-bar having curved extensions or pendants C C, which connect it with the part B. The hand-bar is of peculiar configuration, having two inclined sides, *a a'*, and a curved bottom, *a''*, so that in cross-section or in end view it is triangular, the two sides *a a'* being straight and the bottom *a''* curved. The ornamentation of the side *a*, which is the outer

side, consists of two parallel edge lines, *d d'*, between and touching which is a zigzag line, *e*. The surface on which the zigzag line is formed has vertical milled lines *f*, and in each bend of the zigzag line there is a dot or circle, *g*. The ornamentation of the side *a'* consists of two parallel edge lines, *h h*, the surface between the same being sunken and having milled vertical lines *i* traversed by a two-branched vine or tendrils, *kk*. The bracket has a marginal line, *l*, and the surface or space *m* inside this line is sunken and stippled. On this stippled surface are three curled or looped lines, *n n* and *o*, one for each of the rivet-holes *p p p*, which said lines encircle.

What I claim is—

The design herein described and shown, the same consisting of a combined tureen handle and ear, the hand-bar of the handle having parallel edge lines, a milled sunken surface upon which are a zigzag ridge and intercalated dots or circles, as shown.

In testimony that I claim the foregoing I have hereunto set my hand this 16th day of January, 1886.

JAMES H. ALEXANDER.
