FIGURE 1 is a perspective view of the jar-type container partially broken away to more clearly illustrate the inner cylindrical recess and gasket construction.

FIGURE 2 is a front or rear elevation view thereof; and

FIGURE 3 is a vertical cross-sectional view thereof.

The figures show a solid transparent insert slideably fitted into a heavy metallic sleeve, the insert having a cylindrical bore forming the containing cavity as particularly shown in FIGURE 3, and having a contrasting gasket inserted into the bore and extending over the top wall of the insert.

I claim:

The ornamental design for a jar-type container, as shown and described.
