Mann Merrick Lawrence

UNITED STATES PATENT OFFICE.

WILLIAM H. JOHNSON, OF DELHI, NEW YORK.

CLOTHES-PIN.

SPECIFICATION forming part of Letters Patent No. 548,554, dated October 22, 1895.

Application filed December 14, 1894. Serial No. 531,809. (No model.)

To all whom it may concern:

Be it known that I, WILLIAM H. JOHNSON, a citizen of the United States, residing at Delhi, in the county of Delaware and State of New York, have invented certain new and useful Improvements in Clothes-Pins; and I do hereby declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art

10 to which it appertains to make and use the same.

15 My invention relates to improvements in metallic clothes-pins; and it consists of the novel constructions hereinafter set forth and claimed.

20 In the accompanying drawings, forming part of this specification, Figure 1 represents a top plan view of the metal blank struck up according to my invention. Fig. 2 represents a perspective view of my finished pin applied to a clothes-line. Fig. 3 represents an end elevation of the same; and Fig. 4 represents a front elevation of said finished pin by itself as manufactured for sale.

25 A in the drawings represents the metal blank tapering in width from one end to the other and provided at the larger end with an enlarged head a , preferably rectangular in shape and having rounded corners. This 30 head is provided with an aperture a' , preferably rectangular in form, and is bent laterally across its middle to form approximately square rope-engaging shoulders a^2 . The smaller end of the blank is bent into a 35 rope-retaining hook a^3 , the extreme end of which is bent outwardly and downwardly to form a guiding and retaining lip a^4 . The blank is bent back and doubled upon itself so that the hook a^3 projects a slight distance 40 through the aperture a' from the rear with the upper end of the lip resting upon the outer edge of the shoulder a^2 , by which construction the hooked end of the pin is prevented from springing back through the aperture.

45 When it is desired to apply the pin to a line on which the clothes are hanging, the pin is taken in the hand and the doubled part of the blank compressed until the hook projects 50 sufficiently beyond the front of the blank for its projecting end a^4 to be slipped over the

clothes and rope. The spring action of the blank will hold the rope firmly seated upon the shoulders a^2 and prevent the pin from rocking from side to side by the movement of 55 the clothes by the wind. The pin is always held in a vertical position by the said shoulders, and to remove it from the line the doubled portion of the blank is compressed and the pin slipped upward, and, if necessary, 60 after it is thus compressed the lip, which forms a finger-lever, may be sprung outward and thus facilitate the removal of the pin should it hang upon the clothes and line after it has been compressed, as stated. 65

The pin is made of any suitable spring metal that is rust-proof. When placed in a basket or the like when not in use, these pins do not become entangled with one another, as is ordinarily the case, because the 70 hook ends are guarded by the enlarged heads through which they pass.

Having now described my invention, what I claim as new, and desire to secure by Letters Patent, is—

75 As an improved article of manufacture, a clothes pin consisting of a single piece of metal and having an enlarged apertured head at its upper end which is bent to form square shoulders on both sides of the aperture, the 80 other portion of the metal being extended downward and being bent backward and upward upon itself to form a spring loop and its other end passed through the aperture from the rear and formed with a downwardly extending hook engaging the opposite member near the shoulders and an outwardly and downwardly extending lip, which, when the clothes pin is in a normal position rests upon the shoulders and is prevented from springing back through the aperture; the construction being such that the clothes pin can be applied to the clothes and line by passing the line under the lip and pulling down on the pin, substantially as described. 90

95 In testimony whereof I hereunto affix my signature in presence of two witnesses.

WILLIAM H. JOHNSON.
