(54) **Anti-reverse device for the lever in a remote control apparatus**

(57) An anti-reverse device for the lever in a remote control apparatus, which is placed in a box (11a, 11b), by means of a trailing cable (14), which can be connected to an outer structure of a driving machine, wherein the box has a first opening (12) for the passage of an operating lever (13) for a single cable core (14) movable within a holding reaction, connected to the box, the lever (13) can oscillate around a pivot (16) between a central position and two positions placed on opposite sides to the central position, and locking means of the

lever position (13), which can be easily unlocked, are provided on the outer structure of said box wherein said locking means comprises an external knob (21), to which an elastically flexible ball is joined (28, 29), said ball is snap inserted into cavities (31-33) obtained on the box (11a, 11b), and a shaped plate (35, 36, 37, 38), placed at the end of a rotation shaft (23) of the knob (21), selectively interactive with a pin (34) projecting from the lever (13).

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 99 20 0545

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
