(54) Title: SYSTEM AND METHOD FOR CUSTOMIZED TIME DISPLAY

(57) **Abstract:** A system and method for producing and displaying chronological data according to user specified parameters. The system incorporates language, multi media, and animation into a time display device. The system can include typical features of a conventional time display device, such as an alarm function and a display face. The system also includes a translation engine for combining the parameters and a plurality of supplemental display data, including language, multi media, and animation data, to provide a translation template. The template helps to control the presentation of chronological data in a synchronized fashion by reformatting the chronological data into a translated display format, thereby providing to the user a personalized time display. The display includes selected images and/or language to represent the passage of numerical chronological data. The parameters and the supplemental display data are alterable by the user to customize the presentation of the translated format on the display, so as to present a unique and personalized time display sequence on the display device.
