**Indiana 46515-0490 (US)**

(54) **Toilet for use in recreational vehicle and boats**

(57) A toilet (10) utilizes a pressurized fluid source (20) providing a flush volume of less than 1 gallon. A removable discharge passageway (35) is sealingly coupled at a first end (42) to the toilet waste outlet and at a second end (46) to a floor flange (48), and defines a trap-way for providing a water seal therebetween. In one example, the water seal includes a water column (66), and the discharge passageway is configured to maintain at least about 80% of the water column therein when the toilet is pivoted about 10 degrees. In another example, an upleg (60) extends vertically upward a distance sufficient to maintain a minimum water column within the upleg necessary to maintain the water seal between the bowl (26) and the floor flange when the toilet is pivoted about 10 degrees. In another example, a support bracket (70) maintains the second end of the discharge passageway generally fixed relative to the first end.

**ANNEX TO THE EUROPEAN SEARCH REPORT  
ON EUROPEAN PATENT APPLICATION NO.**

EP 09 17 7250

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on  
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
