# UNITED STATES PATENT OFFICE.

GEORGE GREGORY, OF NEW HAVEN, CONNECTICUT, ASSIGNOR TO HIMSELF  
AND WILLIAM H. COOPER, OF SAME PLACE.

## IMPROVEMENT IN CARPET-FASTENINGS.

Specification forming part of Letters Patent No. **132,282**, dated October 15, 1872.

*To all whom it may concern:*

Be it known that I, GEORGE GREGORY, of New Haven, in the county of New Haven and State of Connecticut, have invented a new Improvement in Carpet-Fastening; and I do hereby declare the following, when taken in connection with the accompanying drawing and the letters of reference marked thereon, to be a full, clear, and exact description of the same, and which said drawing constitutes part of this specification, and represents, in—

Figure 1, a plan view; Fig. 2, a sectional view on line *xx*; and in Fig. 3, a sectional view of the fastening detached.

This invention relates to a device for securing matting to the floor, with special reference to oil-cloth; the object being to secure the cloth to the floor to protect the edge and yet allow of the expansion or contraction of the matting. The invention consists in a plate or strip of sheet metal, rolled to form a shoulder longitudinally, so that one side secured to the floor, the other will overlap the edge of the matting, protecting the edge and securing it in position.

A is the fastening, formed, as seen in Fig. 3, from sheet metal rolled to form a shoulder, *a*, longitudinally in the strip, each side forming a flange, one of which is secured to the floor, the other overlapping the matting B, as seen in Figs. 1 and 2. This overlapping protects the edge and allows the matting to expand or contract, as it unavoidably will. The fastening being secured to the floor and not to the matting is not affected by this expansion or contraction, but prevents the edge of the matting from rolling up or being injured by use.

While especially designed for matting as applied in pieces smaller than the room, this fastening is also applicable to securing ordinary carpet at the extreme edge of the floor.

I claim as my invention—

As an article of manufacture, the herein-described fastening, consisting of a strip of metal forming two flanges, one of which is secured to the floor, the other overlapping the carpet or matting.

GEORGE GREGORY.
