UNITED STATES PATENT OFFICE.

JOHN TALBOTT, OF ALBANY, GEORGIA.

IMPROVEMENT IN GUN-CAPS.

Specification forming part of Letters Patent No. 92,398, dated July 6, 1869.

To all whom it may concern:

Be it known that I, JOHN TALBOTT, of Albany, in the county of Dougherty and State of Georgia, have invented a new and valuable Improvement in Percussion-Caps; and I do hereby declare that the following is a full, clear, and exact description of the construction and operation of the same, reference being had to the annexed drawings, making a part of this specification, and to the letters and figures of reference marked thereon.

Figure 1 of the drawings is a perspective view of my invention. Fig. 2 is an enlarged vertical section through cap and nipple. Fig. 3 is a bottom view, showing rubber ring. Fig. 4 is a top view of cap.

My invention relates to gun-caps; and it consists mainly in manufacturing such caps with a novel and useful arrangement designed for the protection of the powder in the tube or nipple of the gun-lock, and also the fulminating-powder in the cap itself.

The letter A of the drawings represents the nipple of a gun-lock, and the letter B a cap arranged with fulminating-powder in the usual manner, except as hereinafter stated. I make an enlargement or recess in the bottom of this cap, as shown at D of the drawings, so as to

form a rim or groove adapted to receive the ring next mentioned.

The letter *c* represents a ring of soft india-rubber or gum, or other substance impervious to water, which fits tightly in the recess D, and when placed on the nipple clasps the same tensely.

It will readily be perceived that by this arrangement the gunpowder in the nipple and the fulminate in the cap are protected from moisture so long as the cap remains on the tube, thereby rendering said cap of great utility to the soldier and the sportsman.

I do not claim broadly the device of lining percussion-caps with flexible material; but

What I claim as my invention, and desire to secure by Letters Patent, is—

A gun-cap having a recess, D, and ring *c*, constructed and arranged to operate substantially as specified.

In testimony that I claim the above I have hereunto subscribed my name in the presence of two witnesses.

JOHN TALBOTT.
