UNITED STATES PATENT OFFICE.

IRA M. CLARKE, OF NEW MARTINSVILLE, WEST VIRGINIA.

VANITY SET.

Application filed May 14, 1926. Serial No. 109,062.

My invention relates to a novel construction of a vanity set, which can be made out of glass, ceramic ware or the like and which comprises a plurality of ornamental, and compact superimposed receptacles, the bottom receptacle, comprising a dish having preferably a relatively heavy or solid base and provided with an upwardly extending annular flange, by means of which the lower dish cover having an outer annular pendant flange is centered and supported, the top of said dish cover being provided with an upwardly extending annular flange, whereby a rouge box is produced the cover of which serves as a base for a perfume bottle of novel contour, the open end of said bottle being closed by a stopper and said bottle serving as a handle to obtain access to the rouge box.

The elements composing my novel vanity set are preferably formed by a pressing or press blown operations and a novel, ornamental compact and convenient three compartment article or dressing table accessory is produced which is adapted for use on ladies' dressing tables or the like and serves as a convenient container for a powder puff or the like, rouge and for liquid perfumes, toilet waters and the like.

To the above ends, my invention consists of a novel construction of a vanity set, comprising a powder box, rouge box, and bottle for perfumes, toilet waters and the like, all superimposed upon the base of the puff box and assembled in a compact, convenient and ornamental manner.

For the purpose of illustrating my invention I have shown in the accompanying drawings several forms thereof which are at present preferred by me, since the same have been found in practice to give satisfactory and reliable results, although it is to be understood that the various instrumentalities of which my invention consists can be variously arranged and orgainzed and that my invention is not limited to the precise arrangement and organization of the instrumentalities as herein shown and described.

Figure 1, represents a perspective view of the various elements comprising my novel vanity set in unassembled position.

Figure 2, represents a side elevation of the elements seen in Figure 1 in assembled position.

Figure 3, represents a vertical section on line 3—3, Figure 2.

Similar numerals of reference indicate corresponding parts.

1 designates my novel construction of vanity set, the same comprising the lower dish or bowl 2, which is composed of a relatively thick or heavy base member 3, having the thickened outer bead 4 which is provided with the upper seat 5, from which extends upwardly the annular flange 6, the latter forming the outer wall of the puff box. 7 designates the cover for the puff box, the same being provided with the annular pendant outer flange 8, which encloses the lower wall or flange 6 and is supported upon the shoulder 5, said cover 7 being provided with the upwardly extending annular wall or flange 9 which with the base or bottom wall 10 forms the rouge compartment or receptacle. 11 designates the cover of the rouge receptacle, the same being provided with the pedant annular outer flange 12, which surrounds the flange 9, when the parts are assembled. 13 designates the bottle or receptacle for liquid perfume, toilet water and the like, the same being connected to the cover 11 by the neck 14 and being provided with the upper neck or mouth 15 closed by the stopper 16 which may be of any desired shape or contour, but preferably provided with a head 17 for convenience of removal. The bottle 13 serves not only as a container for liquid perfume, toilet water and the like, but also as a handle or knob which may be conveniently grasped for lifting the cover 11 to get access to the rouge box and access can be conveniently had to the bottom receptacle 2 or the powder puff compartment upon the removal of the cover 7. By the provision of the thickened bottom wall 3 and the outer bead 4, a relatively large base or area is formed for the support of the entire device, so that there is no liability of its being overturned when in position on a lady's dressing table or in use.

It will thus be seen from the foregoing that my novel device comprises an attractive ladies' dressing table accessory, wherein a powder box, or powder puff is readily accessible, the intermediate compartment serving as a rouge box, while the upper member serves both as a handle and as a container

for perfume, toilet water and the like. I am aware that in Patent No. 1,478,026 it has been proposed to employ a two compartment article having a bottom receptacle for a powder box, and a cover therefor having an integral bottle thereon. My novel device is differentiated therefrom by the provision of the intermediate rouge box, and the pendant outer annular flanges 12 and 8 into which the inner annular flanges 6 and 9 telescope, and I also provide a thickened base having the outer thickened bead, upon the upper surface of which the bottom of the outer flange 8 rests.

It will now be apparent that I have devised a novel and useful vanity set construction which embodies the features of advantage enumerated as desirable in the statement of the invention and the above description, and while I have, in the present instance, shown and described a preferred embodiment thereof which will give in practice satisfactory and reliable results, it is to be understood that such embodiment is susceptible of modification in various particulars without departing from the spirit or scope of the invention or sacrificing any of its advantages.

Having thus described my invention what I claim as new and desire to secure by Letters Patent, is:—

1. A vanity set, comprising a lower compartment, having an upper annular wall, a cover therefor provided with a lower pendant flange into which said annular wall telescopes, an upper annular wall on said cover forming a rouge box, a cover for said rouge box having an outer pendant annular wall, into which the wall of said rouge box telescopes, and a bottle on said rouge box cover occupying a central upstanding portion thereon.

2. A vanity set, comprising a lower compartment composed of a thickened base member, having an outer bead and an upwardly extending annular flange, a cover therefor provided with a pendant outer annular flange, said cover having an upwardly extending flange forming the outer wall of a rouge box, a cover for said rouge box provided with an outer pendant flange, and a bottle integral with said rouge box cover and provided with a stopper, the cover of said rouge box serving as a base for said bottle.

IRA M. CLARKE.
