UNITED STATES PATENT OFFICE.

WILLIS W. RUSSELL, OF NEW YORK, N. Y.

ROULETTE GAME-BOARD.

No. 827,670.

Specification of Letters Patent.

Patented July 31, 1906.

Application filed September 25, 1905. Serial No. 280,026.

To all whom it may concern:

Be it known that I, WILLIS W. RUSSELL, a citizen of the United States, residing in the city, county, and State of New York, have
5 invented new and useful Improvements in Roulette Game-Boards, of which the following is a specification.

By means of this invention purchasers of roulette-cards are provided with convenient
10 means for completing the operation of using the pack of cards. For example, on trains a board or foundation embodying this invention can be conveniently carried in the pocket and applied to use as required.

15 This invention is set forth in the following specification and claims and illustrated in the annexed drawings, in which—

Figure 1 is a face view of a game-board embodying this invention. Fig. 2 is an edge
20 view of Fig. 1.

In the drawings is shown a foundation or board *a* of suitable material. Cardboard or thin wood can be used. This foundation has a layer of adhesive *b* applied thereto. A
25 protecting layer, such as paraffin paper *c*, will prevent the adhesive from becoming unduly moist or adhering to foreign objects. This board is spaced to receive the layout for roulette-cards. Each space indicates where
30 the respective card shall be attached to the board or foundation. The spacing-lines are indicated at *e*. The board is shown hinged or foldable into small compass. A practical construction has been found to be a board
35 with four folds or five divisions. Such a board can be folded into convenient compass to be slipped or carried in the pocket.

To apply the board to use, the protecting layer or paraffin paper is stripped off or removed, the adhesive moistened, and the
40 cards from the pack required to form the layout are stuck into their respective places, as indicated.

What I claim as my invention, and desire
45 to secure by Letters Patent, is—

1. A game-board for roulette-cards, comprising a base formed of a plurality of hinged sections, each adapted to receive a plurality
50 of cards and each having its upper surface

curing the cards thereto, the length and width of said sections with respect to each other being such that the cards secured to one section will be positioned in alinement with the cards of an opposing section.

2. A game-board for roulette-cards, comprising a base formed of a plurality of hinged sections, each adapted to receive a plurality of cards and each having its upper surface provided with an adhesive substance for securing the cards thereto, the length and width of said sections with respect to each other being such that the cards secured to one section will be positioned in alinement with the cards of an opposing section, combined with a removable protecting-covering for the adhesive substance.

3. A game-board for roulette-cards comprising a base formed of a plurality of hinged sections, each adapted to receive a plurality of cards and each having its upper surface provided with an adhesive substance for securing the cards thereto, the length and width of said sections with respect to each other being such that the cards secured to one section will be positioned in alinement with the cards of an opposing section, each of said sections provided with a plurality of inscriptions for designating which cards are to be secured to the section, the designations for the intermediate sections being different from the end sections and the designation for one of the end sections being different from that of the other of the end sections and certain of the designations of the intermediate sections being different from each other.

4. A game-board for roulette-cards, comprising a base formed of a plurality of hinged sections, each adapted to receive a plurality of cards and each having its upper surface provided with an adhesive substance for securing the cards thereto, the length and width of said sections with respect to each other being such that the cards secured to one section will be positioned in alinement with the cards of an opposing section, each of said sections provided with a plurality of inscriptions for designating which cards are to be secured to the section, the designations for the intermediate sections being different

from the end sections and the designation for
one of the end sections being different from
that of the other of the end sections and cer-
tain of the designations of the intermediate
5 sections being different from each other, com-
bined with a removable protecting medium
for said adhesive surface.

In testimony whereof I have hereunto set
my hand in the presence of two subscribing
witnesses.

WILLIS W. RUSSELL.
